5.3.2 Reset (RST) (contact C2) 31
5.3.3 Clock CLK (contact C3) 31
5.3.4 I/O (contact C7) 31

6 Initial communication establishment procedures 32
6.1 UICC activation and deactivation 32
6.2 Supply voltage switching 32
6.2.0 UICC activation voltage 32
6.2.1 Supply voltage classes 32
6.2.2 Power consumption of the UICC during ATR 32
6.2.3 Application related electrical parameters 32
6.3 Answer To Reset content 33
6.3.0 Introduction 33
6.3.1 Coding of historical bytes 34
6.3.2 Speed enhancement 34
6.3.3 Global Interface bytes 34
6.4 PPS procedure 35
6.5 Reset procedures 35
6.5.1 Cold reset 35
6.5.2 Warm reset 35
6.5.3 Reaction to resets 36
6.6 Clock stop mode 36
6.7 Bit/character duration and sampling time 36
6.8 Error handling 36
6.9 Compatibility 37

7 Transmission protocols 37
7.0 Introduction 37
7.1 Physical layer 38
7.2 Data link layer 38
7.2.0 Introduction 38
7.2.1 Character frame 38
7.2.1.0 Structure, coding and timing 38
7.2.1.1 Low impedance I/O line behaviour 39
7.2.2 Transmission protocol T = 0 39
7.2.2.0 Introduction 39
7.2.2.1 Timing and specific options for characters in T = 0 39
7.2.2.2 Command header 40
7.2.2.3 Command processing 40
7.2.2.3.0 General description 40
7.2.2.3.1 Procedure bytes 40
7.2.2.3.2 Status bytes 40
7.2.2.4 Error detection and correction 41
7.2.3 Transmission protocol T = 1 41
7.2.3.0 Introduction 41
7.2.3.1 Timing and specific options for blocks sent with T = 1 41
7.2.3.1.0 Introduction 41
7.2.3.1.1 Information field size 41
7.2.3.1.2 Character waiting integer 41
7.2.3.1.3 Character waiting time 41
7.2.3.1.4 Block waiting time 42
7.2.3.1.5 Block guard time 42
7.2.3.1.6 Waiting time extension 42
7.2.3.1.7 Error detection code 42
7.2.3.2 Block frame structure 42
7.2.3.2.0 Overall structure 42
7.2.3.2.1 Prologue field 43
7.2.3.2.2 Epilogue field 44
7.2.3.2.3 Block notations 45
7.2.3.3 Error free operation 45
7.2.3.4 Error handling for T = 1 46
7.2.3.4.0 General description 46

7.2.3.4.1 Protocol initialization 46
7.2.3.4.2 Block dependent errors 46
7.2.3.5 Chaining 47
7.2.3.5.0 Chaining Mechanism 47
7.2.3.5.1 Rules for chaining 47
7.3 Transport layer 47
7.3.0 Introduction 47
7.3.1 Transportation of an APDU using T = 0 47
7.3.1.0 Introduction 47
7.3.1.1 Mapping of APDUs to TPDUs 48
7.3.1.1.0 General behaviour 48
7.3.1.1.1 Case 1 48
7.3.1.1.2 Case 2 49
7.3.1.1.3 Case 3 49
7.3.1.1.4 Case 4 50
7.3.1.1.5 Use of procedure bytes '61xx' and '6Cxx' 51
7.3.2 Transportation of a APDU using T = 1 52
7.3.2.0 General mechanism 52
7.3.2.1 Case 1 52
7.3.2.2 Case 2 52
7.3.2.3 Case 3 53
7.3.2.4 Case 4 53
7.4 Application layer 53
7.4.0 Overall description 53
7.4.1 Exchange of APDUs 54
7.4.2 CAT layer 54
7.4.2.0 Overview 54
7.4.2.1 Proactive command 54
7.4.2.2 ENVELOPE Commands 55
7.4.3 Application execution 55

8 Application and file structure 56
8.1 UICC application structure 56
8.2 File types 56
8.2.0 Introduction 56
8.2.1 Dedicated files 57
8.2.2 Elementary files 57
8.2.2.1 Transparent EF 57
8.2.2.2 Linear fixed EF 57
8.2.2.3 Cyclic EF 57
8.2.2.4 BER-TLV structure EF 58
8.3 File referencing 58
8.4 Methods for selecting a file 58
8.4.0 Default state after UICC activation and ATR 58
8.4.1 SELECT by File Identifier referencing 59
8.4.2 SELECT by path referencing 60
8.4.3 Short File Identifier (SFI) 61
8.5 Application characteristics 61
8.5.0 Application selection types 61
8.5.1 Explicit application selection 61
8.5.1.1 SELECT by DF name 61
8.5.1.2 SELECT by partial DF name 62
8.5.2 Application session activation 62
8.5.3 Application session termination 62
8.5.4 Application session reset 63
8.5.5 Void 63
8.6 Reservation of file Ids 63
8.7 Logical channels 64
8.8 Shareable versus not-shareable files 65
8.9 Secure channels 65

9 Security features 66

iTeh STANDARD PREVIEW
(standards.iteh.ai)
Full standard:
https://standards.iteh.ai/catalog/standards/sist/eb67512b-ec1f-4882-ab78-11017a0bd26e/etsi-ts-102-221-v14.0.0-2017-02

9.0 Introduction 66
9.1 Supported security features 66
9.2 Security architecture 66
9.2.0 Overview and basic rules 66
9.2.1 Security attributes 67
9.2.2 Access mode 67
9.2.3 Security condition 67
9.2.4 Access rules 67
9.2.5 Compact format 68
9.2.6 Expanded format 68
9.2.7 Access rule referencing 68
9.3 Security environment 69
9.3.0 Description 69
9.3.1 Definition of the security environment 70
9.3.2 Logical Channels and Security Environment 70
9.4 PIN definitions 71
9.4.0 Introduction 71
9.4.1 Universal PIN 71
9.4.2 Application PIN 71
9.4.3 Local PIN 71
9.4.4 PINs and logical channels 71
9.5 PIN and key reference relationship 72
9.5.0 Introduction 72
9.5.1 Access condition mapping 72
9.5.2 PIN status indication 73

10 Structure of commands and responses 74
10.1 Command APDU 74
10.1.0 Structure and case 74
10.1.1 Coding of Class Byte 75
10.1.2 Coding of Instruction Byte 76
10.1.3 Coding of parameter bytes 77
10.1.4 Coding of Lc byte 77
10.1.5 Coding of data part 77
10.1.6 Coding of Le byte 77
10.2 Response APDU 77
10.2.0 Structure 77
10.2.1 Status conditions returned by the UICC 77
10.2.1.0 Introduction 77
10.2.1.1 Normal processing 78
10.2.1.2 Postponed processing 78
10.2.1.3 Warnings 78
10.2.1.4 Execution errors 78
10.2.1.5 Checking errors 79
10.2.1.5.0 Base checking errors 79
10.2.1.5.1 Functions in CLA not supported 79
10.2.1.5.2 Command not allowed 79
10.2.1.5.3 Wrong parameters 79
10.2.1.6 Application errors 80
10.2.2 Status words of the commands 81
10.3 Logical channels 83

11 Commands 83
11.1 Generic commands 83
11.1.0 Introduction 83
11.1.1 SELECT 83
11.1.1.1 Functional description 83
11.1.1.2 Command parameters and data 83
11.1.1.3 Response Data 84
11.1.1.3.0 Base coding 84
11.1.1.3.1 Response for MF, DF or ADF 85
11.1.1.3.2 Response for an EF 85

11.3 Data Oriented commands 133
11.3.0 Overview and generic mechanism 133
11.3.1 RETRIEVE DATA 134
11.3.1.1 Functional description 134
11.3.1.2 Command parameters and data 135
11.3.2 SET DATA 135
11.3.2.1 Functional description 135
11.3.2.2 Command parameters and data 136

12 Transmission oriented commands 137
12.1 T = 0 specific commands 137
12.1.1 GET RESPONSE 137
12.1.1.1 Functional description 137
12.1.1.2 Command parameters 137

13 Application independent files 138
13.1 EF_{DIR} 138
13.2 EF_{ICCID} (ICC Identification) 139
13.3 EF_{PL} (Preferred Languages) 140
13.4 EF_{ARR} (Access Rule Reference) 140
13.5 DF_{CD} (Configuration Data) 140
13.5.0 Introduction 140
13.5.1 $EF_{LAUNCH\ PAD}$ 141
13.5.2 EF_{ICON} 144
13.6 EF_{UMPC} (UICC Maximum Power Consumption) 145

14 Application independent protocol 146
14.1 File related procedures 146
14.1.1 Reading an EF 146
14.1.2 Updating an EF 146
14.1.3 Increasing an EF 146
14.2 PIN related procedures 147
14.2.0 Overview 147
14.2.1 PIN verification 147
14.2.2 PIN value substitution 147
14.2.3 PIN disabling 148
14.2.4 PIN enabling 148
14.2.5 PIN unblocking 148
14.3 Application selection procedures 148
14.3.1 Application selection by use of the EF_{DIR} file 148
14.3.2 Direct application selection 149
14.3.3 Direct application selection with partial AID 149
14.4 General application related procedures 149
14.4.1 Application session activation 149
14.4.2 UICC application interrogation 149
14.4.3 UICC application session termination 149
14.5 Miscellaneous procedures 149
14.5.1 UICC activation 149
14.5.2 UICC presence detection 149
14.5.3 UICC preferred language request 150
14.5.4 UICC logical channels 150
14.5.5 Power negotiation 150
14.5.6 UICC suspension 150
14.6 CAT related procedures 150
14.6.0 Scope of CAT related procedures in ETSI TS 102 221 150
14.6.1 CAT Initialization procedure 150
14.6.2 Proactive polling 151
14.6.3 Support of commands 151
14.6.4 Support of response codes 151
14.6.5 Independence of applications and CAT tasks 151
14.6.6 Use of BUSY status response 151
14.6.7 Additional processing time 151

15 Support of APDU-based UICC applications over USB 151

Annex A (normative): UCS2 coding of Alpha fields for files residing on the UICC 153

Annex B (informative): Main states of a UICC 155

Annex C (informative): APDU protocol transmission examples 156

C.1 Exchanges Using T = 0 156
C.1.0 Overview 156
C.1.1 Case 1 command 156
C.1.2 Case 2 command 156
C.1.3 Case 3 command 157
C.1.4 Case 4 command 157
C.1.5 Case 2 commands Using the '61' and '6C' procedure bytes 157
C.1.6 Case 4 command Using the '61' procedure byte 158
C.1.7 Case 4 command with warning condition 158

Annex D (informative): ATR examples 159

Annex E (informative): Security attributes mechanisms and examples 161

E.1 Coding 161

E.2 Compact format 161
E.2.0 Coding 161
E.2.1 AM byte 161
E.2.2 SC byte 161
E.2.3 Examples 162

E.3 Expanded format 162
E.3.0 Coding 162
E.3.1 AM_DO 162
E.3.2 SC_DO 162
E.3.3 Access rule referencing 163
E.3.4 Examples 163

Annex F (informative): Example of contents of EF_{ARR} '2F06' 164

F.1 Sample content of the EF_{ARR} 164

Annex G (informative): Access Rules Referencing (ARR) 165

G.1 Sample content of EF_{ARR} 165

G.2 Example of access rule referencing with SE ID 168

Annex H (normative): List of SFI Values assigned in ETSI TS 102 221 169

H.1 List of SFI Values at the MF Level 169

Annex I (informative): Resets and modes of operation 170

Annex J (informative): Example of the use of PINs 171

J.1 Application having several ADFs 171

J.2 Two applications with two different security contexts 171

Annex K (informative): Examples of the PIN state transition on multi verification capable UICC 172

K.0 Context 172

K.1 PIN state transition on the single logical channel 172

K.2 PIN state transition between logical channels 174

Annex L (informative): Examples of SET DATA and RETRIEVE DATA usage.....178
L.1 Examples of SET DATA and RETRIEVE DATA usage 178
L.2 Examples of RETRIEVE DATA usage with transport protocol T = 0 179
Annex M (informative): Examples of ODD AUTHENTICATE instruction code usage 182
M.1 Examples of ODD AUTHENTICATE instruction code usage at applicative level.....182
M.2 Examples of ODD AUTHENTICATE instruction code usage with transport protocol T = 0.....183
Annex N (informative): Change history 186
History 190

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Smart Card Platform (SCP).

It is based on work originally done in the 3GPP in TSG-terminals WG3.

The contents of the present document are subject to continuing work within TC SCP and may change following formal TC SCP approval. If TC SCP modifies the contents of the present document, it will then be republished by ETSI with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

- 0 early working draft;
- 1 presented to TC SCP for information;
- 2 presented to TC SCP for approval;
- 3 or greater indicates TC SCP approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The present document defines a generic Terminal/Integrated Circuit Card (ICC) interface.

The aim of the present document is to ensure interoperability between an ICC and a terminal independently of the respective manufacturer, card issuer or operator. The present document does not define any aspects related to the administrative management phase of the ICC. Any internal technical realization of either the ICC or the terminal is only specified where these are reflected over the interface.

Application specific details for applications residing on an ICC are specified in the respective application specific documents. The Universal Subscriber Identity Module (USIM)-application for 3G telecommunication networks is specified in ETSI TS 131 102 [2].
