### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC 62657-4:2022](#)

<https://standards.iteh.ai/catalog/standards/sist/70b7607b-aef9-4cfc-87d6-258e40102001/iec-62657-4-2022>

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**INDUSTRIAL NETWORKS –  
COEXISTENCE OF WIRELESS SYSTEMS –**
**Part 4: Coexistence management with central coordination  
of wireless applications**
**FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62657-4 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
65C/1164/FDIS	65C/1170/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/standardsdev/publications](http://www.iec.ch/standardsdev/publications).

A list of all parts in the IEC 62657 series, published under the general title *Industrial networks – Coexistence of wireless systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## Itéh STANDARD PREVIEW (standards.iteh.ai)

<https://standards.iteh.ai/catalog/standards/sist/70b7607b-aef9-4cfc-87d6-258e40102001/iec-62657-4-2022>

## INTRODUCTION

The IEC 62657 series provides background, foundations, process and examples to achieve wireless coexistence. With a coexistence management process according to IEC 62657-2, a predictable assuredness of coexistence can be achieved for a given spectrum while ensuring that application requirements continue to be met. The present document provides an automated coexistence management.

# iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC 62657-4:2022](#)

<https://standards.iteh.ai/catalog/standards/sist/70b7607b-aef9-4cfc-87d6-258e40102001/iec-62657-4-2022>

## INDUSTRIAL NETWORKS – COEXISTENCE OF WIRELESS SYSTEMS –

### Part 4: Coexistence management with central coordination of wireless applications

#### 1 Scope

This part of IEC 62657 specifies a concept and methods for central coordination (CC) of automation applications using wireless communications to extend the coexistence management according to IEC 62657-2. It establishes system elements, interfaces and relationships for a central coordination. Functions, data, and data exchange for assessing and maintaining the coexistence state are specified.

This document specifies the central coordination point (CCP) approach as one example of the usage of the formal description given in IEC 62657-3.

This document is applicable to develop, implement, or modify procedures or solutions.

This document provides requirements for automated coexistence management systems.

This document provides requirements for:

- determination of the coexistence state,
- automated coexistence management procedures,  
IEC 62657-4:2022  
<https://standards.iteh.ai/catalog/standards/ist/7017607b-aef9-4fcf-87d6-258e40102001/iec-62657-4-2022>
- CC amendments for existing wireless communication solutions,  
IEC 62657-2:2022  
<https://standards.iteh.ai/catalog/standards/ist/7017607b-aef9-4fcf-87d6-258e40102001/iec-62657-2-2022>
- CC functions that coordinate legacy and new wireless communication systems.

This document is not restricted to a specific radio frequency range nor is it restricted to a specific wireless communication technology.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62657-2:<sup>1</sup>, *Industrial networks – Coexistence of wireless systems – Part 2: Coexistence management*

IEC 62443 (all parts), *Security for industrial automation and control systems*

ISO/IEC 10731, *Information technology – Open Systems Interconnection – Basic Reference Model – Conventions for the definition of OSI services*

<sup>1</sup> Under preparation. Stage at the time of publication: IEC FDIS 62657-2:2022.

### 3 Terms, definitions, abbreviated terms and conventions

#### 3.1 General

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

#### 3.2 Terms and definitions specific for this document

##### 3.2.1

##### **allocation**

entry in the table of frequency allocations of a given frequency band for the purpose of its use by one or more radio communication services or the radio astronomy service under specified conditions

##### 3.2.2

##### **coexistence distance**

difference between the threshold value for the coexistence state and the actual value of the coexistence state function expressing the distance before reaching the coexistence state

##### 3.2.3

##### **coexistence margin**

difference between the actual value of the coexistence state function and the threshold for the coexistence state expressing the reserve before leaving the coexistence state

[IEC 62657-4:2022](#)

##### 3.2.4

##### <https://standards.iteh.ai/catalog/standards/sist/70b7607b-aef9-4fcf-87d6-258e40102001/iec-62657-4-2022>

service officially operated under the rules of the local regulatory authority that provides a list of available channels and possibly the maximum EIRP allowable on these channels based on queries containing the geolocation of the wireless regional area network (WRAN) devices

##### 3.2.5

##### **geolocation**

process of acquiring the location data of a device, determining its latitude and longitude

##### 3.2.6

##### **harmful interference**

any emission, radiation or induction that endangers the functioning of a radio navigation service or of other safety services or seriously degrades, obstructs, or repeatedly interrupts a radiocommunications service operating in accordance with the ITU and local Regulations

##### 3.2.7

##### **incumbent radio system**

wireless communication system that is not under the control of, and is not affected by, the coexistence manager

##### 3.2.8

##### **logical link**

application oriented communication relationship which enables the transmission of user data between one logical end point of the reference interface in a source device and one logical end point of the reference interface in a target device

**3.2.9****master station**

data station that has been designated by the control station to ensure data transfer to one or more slave stations

Note 1 to entry: At a given instant, there can be only one master station on a data link.

[SOURCE: IEC 60050-721:1991, 721-19-12]

**3.2.10****service flow**

QoS parameters for the PDUs that are exchanged on a connection, and provide a mechanism for upstream and downstream QoS management

**3.2.11****service flow identifier****SFID**

unique identifier for a service flow dealing with how higher layer packets/application sessions are mapped to their QoS requirements and scheduling constraints

**3.2.12****slave station**

data station that is selected by a master station to receive data

**3.3 Additional terms and definitions for the templates****3.3.1****array of frequency**

collected values from sensing start frequency to sensing end frequency during the sensing process

[IEC 62657-4:2022](#)

**3.3.2****array of power spectral density**

collected values of power spectral density from sensing start frequency to sensing end frequency during the sensing process

**3.3.3****CCP address**

communication partner identification of the central coordination point for a service

**3.3.4****communication link ID**

identifier (ID) as part of the response of a service execution related to the communication link

**3.3.5****destination address**

communication partner identification for a service

**3.3.6****limits of performance parameter**

value returned with the limit for a performance parameter

**3.3.7****medium sensing report type**

requested type of information related to the generation type of medium resource report

Note 1 to entry: The type is represented by a number with the following code: 1: Event driven; 2: Cyclic; 3: Requested.

**3.3.8****parameter ID**

identifier (ID) of a parameter that is specified by a standard or vendor and identifies the parameter whose value is returned

**3.3.9****parameter value**

contains the value of the parameter to be returned

**3.3.10****performance parameter type**

requested type of information related to a communication link ID

Note 1 to entry: The type is represented by a number with the following code: 1: Transmission time; 2: Update time; 3: Response time; 4: Data throughput; 5: Communication availability.

**3.3.11****radio regulation database ID**

identifier (ID) of the radio regulation database

**3.3.12****received signal strength indication****RSSI**

value of the power present in a received radio signal

**3.3.13****received signal strength indication mean****RSSI mean**

mean value of the power present in a received radio signal

**3.3.14****received signal strength indication standard deviation****RSSI standard deviation**

standard deviation value of the power present in a received radio signal

**3.3.15****report interval**

interval time of cyclic reports

Note 1 to entry: This belongs to the cyclic "medium sensing report type".

**3.3.16****sensing duration**

parameter specifying the duration of a sensing process

**3.3.17****sensing end frequency**

parameter specifying the stop frequency of sensing

**3.3.18****sensing interval**

parameter specifying the interval between sensing processes

**3.3.19****sensing start frequency**

parameter specifying the start frequency of sensing
