About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22,000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67,000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**FUEL CELL TECHNOLOGIES –
Part 2-100: Fuel cell modules – Safety**
FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62282-2-100 has been prepared by IEC technical committee 105: Fuel cell technologies.

This first edition cancels and replaces IEC 62282-2, published in 2012.

This edition includes the following significant technical changes with respect to IEC 62282-2:2012:

- references to IEC 60050-485¹ instead of IEC TS 62282-1;
- update of normative references;
- update of definitions, in particular **fuel cell module for normal operation**;
- leakage values under normal and abnormal operation have been addressed;
- a delayed ignition test has been included;
- protective measures to limit gas leakage have been included;

¹ Under preparation. Stage at the time of publication IEC BPUB 60050-485:2019.

- the requirements for insulation between live parts and **SELV** have been updated;
- the general safety strategy has been modified to reflect the needs for different application standards; the modifications are in line with similar modifications made to IEC 62282-3-100;
- the electrical components clause has been modified to reflect the needs for different application standards; the modifications are in line with similar modifications made to IEC 62282-3-100;
- protective earthing as part of the module or bonding as a measure within the installation has been introduced;
- a dielectric strength test has been completely updated by referring to IEC 62744-1 for voltages up to 1 000 V AC/1 500 V DC;
- a new “pressure drop method” leakage test method has been included;
- terms such as normal/abnormal e.g. in conjunction with operating conditions are used in a more consistent way;
- inclusion of definitions for **hazards** and **hazardous situations** based on the IEC 60079 series;
- the marking and instructions have been enlarged to provide the system integrator with the necessary information;
- a new Annex A addressing significant **hazards**, **hazardous situations** and events dealt with in this document, and linked to 4.1 (General safety strategy) has been added.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
105/782/FDIS	105/793/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62282 series, published under the general title *Fuel cell technologies*, can be found on the IEC website.

NOTE In this document, the following print type is used:

- terms defined in Clause 3: **in bold type**.

The reader's attention is drawn to the fact that Annex C lists all of the “in-some-country” clauses on differing practices of a less permanent nature relating to the subject of this document.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

FUEL CELL TECHNOLOGIES – Part 2-100: Fuel cell modules – Safety

1 Scope

This part of IEC 62282 provides safety related requirements for construction, operation under normal and abnormal conditions and the testing of **fuel cell modules**. It applies to **fuel cell modules** with the following electrolyte chemistry:

- alkaline;
- polymer electrolyte (including direct methanol **fuel cells**)²;
- phosphoric acid;
- molten carbonate;
- solid oxide;
- aqueous solution of salts.

Fuel cell modules can be provided with or without an enclosure and can be operated at significant pressurization levels or close to ambient pressure.

This document deals with conditions that can yield **hazards** to persons and cause damage outside the **fuel cell modules**. Protection against damage inside the **fuel cell modules** is not addressed in this document, provided it does not lead to **hazards** outside the module.

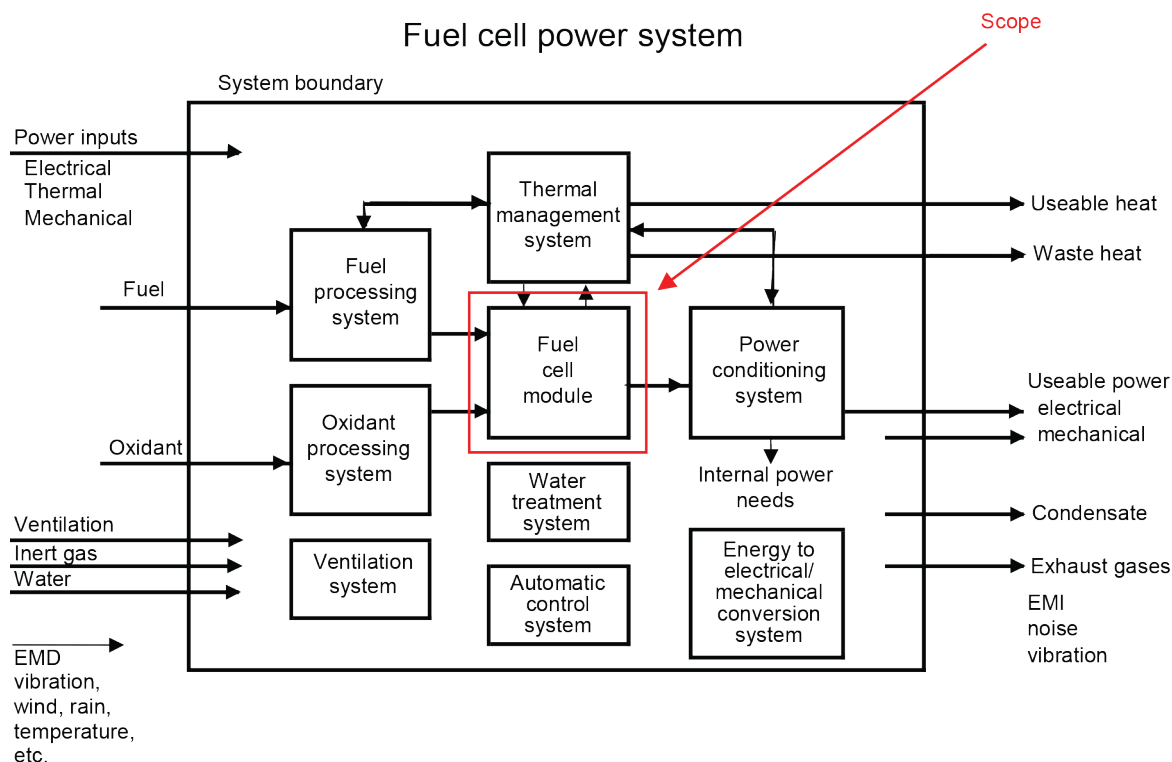

These requirements can be superseded by other standards for equipment containing **fuel cell modules** as required for particular applications.

This document does not cover **fuel cell** road vehicle applications.

This document is not intended to limit or inhibit technological advancement. An appliance employing materials or having forms of construction differing from those detailed in the requirements of this document can be examined and tested according to the purpose of these requirements and, if found to be substantially equivalent, can be considered to comply with this document.

The **fuel cell modules** are components of final products. These products require evaluation according to appropriate end-product safety requirements.

² Also known as proton exchange membrane fuel cell.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1 fuel cell module

assembly incorporating one or more **fuel cell stacks** and, if applicable, additional components, which is intended to be integrated into a power system or a vehicle

Note 1 to entry: A **fuel cell module** comprises the following main components: one or more **fuel cell stack(s)**, a piping system for conveying fuels, oxidants and exhausts, electric connections for the power delivered by the stack(s) and means for monitoring, control or both. Additionally, a **fuel cell module** can comprise: means for conveying additional fluids (e.g. cooling media, inert gas), means for detecting normal and abnormal operating conditions, enclosures or pressure vessels and module **ventilation** systems, and the required electronic components for module operation and power **conditioning**.

[SOURCE: IEC 60050-485:—, 485-09-03]

3.2 acceptance test

contractual test to prove to the customer that the item meets certain conditions of its specification

[SOURCE: IEC 60050-151:2001, 151-16-23, modified – The admitted term "hand-over test" has been deleted.]

3.3 maximum allowable differential working pressure

maximum differential pressure between the anode and cathode side, specified by the manufacturer, which the **fuel cell module** can withstand without any damage or permanent loss of functional properties

Note 1 to entry: The maximum allowable differential working pressure is expressed in Pa.

[SOURCE: IEC 60050-485:—, 485-17-02, modified – "fuel cell" has been replaced with "fuel cell module".] <https://standards.iteh.ai/catalog/standards/sist/94c5806d-f502-4766-9cbc-05de23da986c/iec-62282-2-100-2020>

3.4 allowable working pressure

maximum gauge pressure specified by the manufacturer which the **fuel cell module** can withstand without any damage or permanent loss of functional properties

Note 1 to entry: For **fuel cell modules** incorporating pressure relief devices, this is normally used to define the threshold of the set pressure.

3.5 ambient temperature

temperature of the medium surrounding a device, equipment or installation which may affect the performance of the device, equipment or installation

3.6 conditioning

<related to cells and stacks> preliminary step that is required to properly operate a **fuel cell module** (3.1) to achieve a desired performance following a protocol specified by the manufacturer

Note 1 to entry: The **conditioning** can include reversible processes, or irreversible processes, or both depending on the cell technology.

[SOURCE: IEC 60050-485:—, 485-11-08, modified – "fuel cell" has been replaced with "fuel cell module".]

3.7

fuel cell

electrochemical device that converts the chemical energy of a fuel and an oxidant to electric energy (DC power), heat and reaction products

Note 1 to entry: The fuel and oxidant are typically stored outside the **fuel cell** and transferred into the **fuel cell** as they are consumed.

[SOURCE: IEC 60050-485:—, 485-08-01]

3.8

fuel cell stack

assembly of cells, separators, cooling plates, manifolds and a supporting structure that electrochemically converts, typically, hydrogen-rich gas and air reactants to DC power, heat and other reaction products

[SOURCE: IEC 60050-485:—, 485-06-01]

3.9

rated current

maximum continuous electric current as specified by the manufacturer, at which the **fuel cell module** has been designed to operate

[SOURCE: IEC 60050-485:—, 485-12-02, modified – “power system” has been replaced with “module” and the note has been deleted.]

3.10

crossover

cross leakage

leakage between the fuel side and the oxidant side of a **fuel cell**, in either direction, generally through the electrolyte

[SOURCE: IEC 60050-485:—, 485-06-25]

3.11

gas leakage

sum of all gases leaving the **fuel cell module** except the intended exhaust gases

Note 1 to entry: Gas leakage may occur from

- the **fuel cell stack**;
- associated pressure relief devices;
- other gas ducting and flow controlling components.

[SOURCE: IEC 60050-485:—, 485-06-24, modified – The Note 1 to entry has been added.]

3.12

hazard

potential source of harm

[SOURCE: ISO/IEC Guide 51:2014, 3.2]

3.13

harm

injury or damage to the health of people, or damage to property or the environment

[SOURCE: ISO/IEC Guide 51:2014, 3.1]

3.14**hazardous area**

area in which an explosive atmosphere is present, or may be expected to be present, in quantities such as to require special precautions for the construction, installation and use of electrical apparatus

Note 1 to entry: IEC 60079-10 gives a classification of hazardous areas containing explosive gas atmospheres (see IEC 60050-426-03-03, IEC 60050-426-03-04 and IEC 60050-426-03-05).

[SOURCE: IEC 60050-426:2008, 426-03-01, modified – The Note 2 to entry has been deleted.]

3.15**heat deflection temperature**

temperature at which a standard test bar deflects a specified distance under load

Note 1 to entry: It is used to determine short-term heat resistance.

3.16**lower flammability limit****LFL**

minimum concentration of fuel in a fuel-air mixture where a combustion can be ignited by an ignition source

Note 1 to entry: A fuel-air mixture is flammable when combustion can be started by an ignition source. The main component is the proportions or composition of the fuel-air mixture. A mixture that has less than a critical amount of fuel, known as the **lower flammability limit (LFL)** or more than a critical amount of fuel, known as the rich or upper flammability limit (UFL), will not be flammable.

3.17**maximum operating pressure**

maximum gauge pressure, specified by the manufacturer of a component or system, at which it is designed to operate continuously

Note 1 to entry: The **maximum operating pressure** is expressed in Pa.

Note 2 to entry: The **maximum operating pressure** includes all **normal operation**, both steady state and transient.

[SOURCE: IEC 60050-485:—, 485-17-04, modified – The Note 2 to entry has been added.]

3.18**ventilation**

movement of air and its replacement with fresh air due to the effects of wind, temperature gradients, or artificial means (for example, fans or extractors)

[SOURCE: IEC 60050-426:2008, 426-03-14]

3.19**open-circuit voltage****OCV****no-load voltage**

voltage across the **stack terminals** of a **fuel cell** with fuel and oxidant present and in the absence of external current flow

Note 1 to entry: The **open-circuit voltage** is expressed in V.

Note 2 to entry: This note applies to the French language only.

[SOURCE: IEC 60050-485:—, 485-13-02]

3.20 routine test

conformity test made on each individual item during or after manufacture

Note 1 to entry: Not to be confused with "Conformity test" [IEC 60050-151:2001, 151-16-15]: test for conformity evaluation or "Conformity evaluation" [IEC 60050-151:2001, 151-16-14]: systematic examination of the extent to which a product, process or service fulfils specified requirements.

[SOURCE: IEC 60050-151:2001, 151-16-17, modified – The note to entry has been added.]

3.21 safeguarding

control system actions, based on process parameters, taken to avoid conditions that might be **hazardous** to personnel or might result in damage to the **fuel cell** or its surroundings

[SOURCE: IEC 60050-485:—, 485-09-15]

3.22 safety extra low voltage SELV

voltage under normal and single fault conditions that do not exceed the values given in the relevant application standard of 4.2.8

3.23 thermal equilibrium conditions

stable temperature conditions indicated by temperature changes of no more than 3 K (5 °F) or 1 % of the absolute operating temperature, whichever is higher between two readings 15 min apart

3.24 type test

conformity test made on one or more items representative of the production

Note 1 to entry: Not be confused with "Conformity test" [IEC 60050-151, 151-16-15]: test for conformity evaluation or "Conformity evaluation" [IEC 60050-151, 151-16-14]: systematic examination of the extent to which a product, process or service fulfils specified requirements.

[SOURCE: IEC 60050-151:2001, 151-16-16, modified – The note to entry has been added.]

3.25 normal operation

operation of the **fuel cell module** under the normal conditions as specified by the manufacturer such as the environment conditions, intended gas, electric grid, within its specified tolerances

3.26 auto-ignition temperature

lowest temperature (of a hot surface) at which under specified test conditions an ignition of a flammable gas or vapour in mixture with air or air-inert gas occurs

[SOURCE: ISO/IEC 80079-20-1:2017, 3.3, modified – "hot" has been added.]

3.27 hydrostatic relief valve

pressure relief valve actuated by hydrostatic inlet pressure that opens in proportion to the increase in pressure over the opening pressure

3.28 safety valve

pressure relief valve actuated by inlet static pressure and characterized by rapid opening or popping action

Note 1 to entry: ANSI/CSANGV2-2000 [21] has the following clause:

“The effectiveness of the pressure relief devices (PRDs) shall be demonstrated in accordance with section 18.9 (bonfire test)”.

The bonfire tests are designed to demonstrate that the finished containers complete with the pressure relief devices specified in the design will prevent the rupture of the container when tested under some specified fire conditions.

Note 2 to entry: CGA 12.6-M94 [22] uses a big safety factor. The components are tested at four times the design pressure for 1 min.

This standard does not have a performance test for the PRD(s).

Note 3 to entry: The effectiveness of the PRD for the **fuel cell module** cannot be tested since it is not the end product. It is not known what pressures, in abnormal situations, the module could be subjected to. In fact, the abnormal situations are unknown at the module stage. The size and pressure of the fuel tank is unknown and so might be the gas train. Therefore, testing for performance at the module level would not be representative and using very high safety factors might be design-restrictive.

Note 4 to entry: The best idea might be to have the module manufacturer supply at least the following information to the end user:

- a) type of PRD/PRV used;
- b) setting (opening pressure) of the PRD/PRV;
- c) flow capacity;
- d) the end user should investigate the effectiveness of the module PRD/PRV in the end product.

3.29 stack terminal bus bar

output terminal at which electric power is supplied from the **fuel cell stack**

4 Requirements

4.1 General safety strategy

The manufacturer shall perform in written form a risk analysis to ensure that

- a) all reasonably foreseeable **hazards**, **hazardous** situations and events throughout the anticipated **fuel cell** power system's lifetime have been identified (see Annex A for a listing of typical **hazards**),
- b) the risk for each of these **hazards** has been estimated from the combination of probability of occurrence of the **hazard** and of its foreseeable severity,
- c) the two factors which determine each one of the estimated risks (probability and severity) have been eliminated or reduced to a level not exceeding the acceptable risk level, as far as is practically possible, through
 - 1) inherently safe design of the construction and its methods, or
 - 2) passive control of energy releases without endangering the surrounding environment (for example, burst disks, release valves, thermal cut-off devices) or by safety related control functions, and
 - 3) for residual risks which could not have been reduced by the measures according to 1) and 2), provision of labels, warnings or requirements of special training shall be given, considering that such measures need to be understood by the persons which are in the area of the **hazards**.
