About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22,000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**SEMICONDUCTOR DEVICES –
SEMICONDUCTOR INTERFACE FOR HUMAN BODY COMMUNICATION –****Part 4: Capsule endoscope****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
<https://standards.iteh.ai/catalog/standards/sist/dadc2f99-84fe-4820-a9fd-6c82534f7fb3/iec-62779-4-2020>
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62779-4 has been prepared by IEC technical committee 47: Semiconductor devices.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
47/2600/FDIS	47/2611/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62779 series, published under the general title *Semiconductor devices – Semiconductor interface for human body communication*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

<https://standards.iteh.ai/catalog/standards/sist/dadc2f99-84fc-4820-a9fd-6c82534f7f3c/iec-62779-4-2020>

INTRODUCTION

IEC 62779-1, IEC 62779-2 and IEC 62779-3 define the general requirements, measurement method and functional type of a semiconductor interface for human body communication. They include the general and functional specifications of the interface, the electrical performances of an electrode, and the operational conditions of the interface. However, an in-body to on-body channel for a capsule endoscope using galvanic coupling human body communication (HBC) is different from the channel that is described in IEC 62779-1, IEC 62779-2 and IEC 62779-3 using capacitive coupling human body communication (i.e. channel properties, such as signal loss and signal propagation mechanism, are different). Therefore, the semiconductor interface covered by IEC 62779-1, IEC 62779-2 and IEC 62779-3 cannot be used for the capsule endoscope using galvanic coupling human body communication. A common interface for a capsule endoscope using human body communication should be defined to secure communication compatibility between various capsule endoscope devices and receiving devices that are implemented on or inside the human body.

SEMICONDUCTOR DEVICES – SEMICONDUCTOR INTERFACE FOR HUMAN BODY COMMUNICATION –

Part 4: Capsule endoscope

1 Scope

This part of IEC 62779 defines general requirements on the electrical performances of a semiconductor interface for capsule endoscope using galvanic coupling human body communication. It includes general and functional specifications of the interface. The semiconductor interface that is covered in this document is the interface to handle or deliver an electrical signal between the capsule endoscope inside the human body and the HBC modem in the receiving device outside the human body.

NOTE Additional information on capsule endoscope using the human body communication is provided in Annex A.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEEE 802.15.6:2012, *IEEE Standard for Local and Metropolitan area networks – Part 15.6: Wireless Body Area Networks* [IEC 62779-4:2020](https://standards.iteh.ai/catalog/standards/sist/dadc2f99-84fe-4820-a9fd-6c82534f7f3c/iec-62779-4-2020)

3 Terms, definitions and letter symbols

For the purposes of this document, the following terms, definitions and letter symbols apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1 General terms

3.1.1

transmitting electrode

golden physical structure that transmits an electrical signal from a capsule endoscope to the human body while typically located inside the human body and adhering to the small bowel

Note 1 to entry: A transmitting electrode delivers an electrical signal to a non-metallic transmission channel, the human body.

3.1.2

capsule endoscope

small round and tube-shaped fixture that contains a LED module, lens module, sensor PCB, battery and power module

3.1.3**image sensor**

semiconductor device that converts the luminance of light in front of the image sensor to electrical signal

3.1.4**driver**

semiconductor device that delivers image data to the human body in the form of an electrical signal

Note 1 to entry: The driver is located before the transmitting electrode and outputs the electrical signal with a pre-limited current and pre-limited voltage.

3.1.5**galvanic coupling human body communication**

human body communication method in which a receiver with two electrodes in-body or on-body can sense the change of electrical current caused by a transmitter through a part of the human body

3.1.6**capacitive coupling human body communication**

human body communication method in which a receiver with an electrode on-body and a ground off-body can sense the change of electrical potential caused by a transmitter with an electrode on-body and a ground off-body

3.1.7**receiving electrode**

physical metallic structure for receiving an electrical signal from the human body and delivering the received signal to the analog front end

Note 1 to entry: A receiving electrode delivers an electrical signal from a non-metallic transmission channel, the human body.

3.1.8**receiving device**

electrical device for receiving image data transmitted from a capsule endoscope inside the human body and storing the received image data in a storage device

Note 1 to entry: The storage device can be a flash memory or hard disk drive.

3.1.9**band-pass filter**

semiconductor device or circuit component in an analog front end that eliminates low frequency noise (i.e. noise from a power line or a fluorescent light) and high frequency noise (i.e. noise from a radio or a TV broadcasting, a cellular phone) that overlap in a received signal

3.1.10**analog to digital converter****ADC**

semiconductor device or circuit component in an analog front end that converts filtered analog data to digital data

Note 1 to entry: The converted digital data can be processed in the modem of the receiving device.

3.1.11**data recovery circuit****DRC**

semiconductor device or circuit component in an analog front end that recovers a digital data signal from a filtered signal in the receiving device

Note 1 to entry: The DRC can consist of a comparator and CDR circuit or ADC only.

3.2 Rating and characteristics

3.2.1 Capsule endoscope characteristics

3.2.1.1

single fault current between transmitting electrodes

I_{SFC}

maximum amount of short current between the electrodes of the capsule endoscope in the capsule endoscope semiconductor interface

3.2.1.2

output impedance between transmitting electrodes

Z_{EC}

impedance seen from the human body into the transmitting electrodes on the capsule endoscope in the capsule endoscope semiconductor interface

Note 1 to entry The output impedance depends on the output impedances of the driver.

3.2.2 Receiving device characteristics

3.2.2.1

input impedance of receiving electrode

Z_{ER}

impedance seen from the human body into the receiving electrode of the receiving device in a capsule endoscope semiconductor interface

Note 1 to entry: The input impedance depends on the input impedances of a band-pass filter and signal amplifier that are typically the very first stages of an analog front end.

3.2.3 Transfer characteristics

3.2.3.1

input sensitivity of receiving device

IS

minimum signal requirement for the receiving device to recover the transmitted signal from the capsule endoscope correctly

Note 1 to entry: For the definition of IS the required bit error rate should be satisfied between the capsule endoscope and the receiving device.

Note 2 to entry: This note applies to the French language only.

3.2.3.2

dynamic range

DR

ratio of a signal's maximum to minimum voltage ratio at an input of a semiconductor interface for capsule endoscope human body communication that can be tolerated without signal distortion

Note 1 to entry: Dynamic range depends on a minimum drive level of a comparator and a signal gain of a signal amplifier.

Note 2 to entry: This note applies to the French language only.

3.2.3.3

voltage gain

G_V

amplifying amount for the amplifier circuit or band-pass filter component in the analog front end without being attenuated or removed intentionally

3.2.3.4**lower cut-off frequency** f_{CL}

lower frequency where a receiving signal is attenuated by 3 dB as passing through a band-pass filter

SEE: Figure 1.

3.2.3.5**upper cut-off frequency** f_{CU}

upper frequency where a receiving signal is attenuated by 3 dB as passing through a band-pass filter

SEE: Figure 1.

3.2.3.6**bandwidth** BW

frequency width starting from the lower cut-off frequency to upper cut-off frequency without being attenuated or removed intentionally

Note 1 to entry: This note applies to the French language only.

SEE: Figure 1.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

IEC

Key

BW	Bandwidth	f_{CL}	Lower cut-off frequency
f_{CU}	Upper cut-off frequency		

Figure 1 – Definition of cut-off frequency and bandwidth

3.2.3.7**propagation loss** P_L

amount of attenuation when a signal transmitted from the capsule endoscope passes through the human body

Note 1 to entry: Typically propagation loss can be defined as the ratio of the transmitting voltage swing and received voltage swing.

3.2.3.8

lock range

LR

operating frequency range of the CDR where the CDR circuit can be locked

Note 1 to entry: This note applies to the French language only.

3.2.3.9

bit width of ADC

BIT_{ADC}

output resolution of the ADC which can determine the processing accuracy of the modem in the receiving device

3.3 Letter symbols

Table 1 – Letter symbols

Name and designation	Letter symbol
supply voltage	V_{SC}
operating current	I_{SC}
operating time	t_{OPC}
single fault current between transmitting electrodes	I_{SFC}
output impedance between transmitting electrodes	Z_{EC}
supply voltage	V_{SR}
operating current	I_{SR}
operating time	t_{OPR}
input impedance between receiving electrodes	Z_{ER}
input sensitivity of receiving device	I_S
dynamic range	DR
voltage gain	G_V
lower cut-off frequency	f_{CL}
upper cut-off frequency	f_{CU}
bandwidth	BW
propagation loss	P_L
lock range	LR
bit width of ADC	BIT_{ADC}

4 General requirements

4.1 General specifications

4.1.1 General

Clause 4 provides general specifications to specify the functional and external requirements for a semiconductor interface for a capsule endoscope using human body communication.

4.1.2 Function

4.1.2.1 Category

If an interface has a functional or electrical category, it shall be stated.

4.1.2.2 Functional description

A general description of the function performed by the interface shall be given.

4.1.2.3 Block diagram

The overall structure of the interface to realize the function shall be given. Details of the structure shall be given using a block diagram. A semiconductor interface for capsule endoscope using human body communication consists of a transmitting electrode and receiving electrode, capsule endoscope (CE), and receiving device (RD). A controller (CTRL) and driver (DRV) in the capsule endoscope convert the image data into an electrical signal and send it to the transmitting electrode. The received electrical signal from the human body is amplified by the signal amplifier (SA), filtered by the band-pass filter (BPF), and processed by the data recovery circuit (DRC) in an analog front end (AFE). The AFE delivers the processed data to the modem in the receiving device. (See an example in Figure 2 for more details.)

IEC

Key

CE	Capsule endoscope	AFE	Analog front end
DRV	Driver	BPF	Band-pass filter
CTRL	Controller	DRC	Data recovery circuit
RD	Receiving device	STG DEV	Storage device
SA	Signal amplifier	TE	Transmitting electrode
SB	Small bowel	RE	Receiving electrode
IMGS	Image sensor	HB	Human body
MOD	Modem	INB	Inside of human body
OUTB	Outside of human body		

NOTE The order of the components in the interface can be changed if necessary, as long as the interface satisfies the required performances.

Figure 2 – Typical example of semiconductor interface structure for capsule endoscope using galvanic coupling human body communication

If applicable, control signals that are transmitted between the interface and an HBC modem shall be defined in the block diagram.

The data recovery circuit (DRC) in the receiving device can be implemented using a comparator and CDR or it can be implemented using an ADC only. (See an example in Figure 3 for more details.)
