#### **About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### **About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### **IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)**

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

#### **Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary of electronic and electrical terms containing 21 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### **IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### **IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)**

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### **IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

#### **IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTRONIC DISPLAYS –****Part 2-4: Transparent displays –  
Overview of application scenarios**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 62977-2-4, which is a Technical Report, has been prepared by IEC technical committee 110: Electronic display devices.

The text of this Technical Report is based on the following documents:

Enquiry draft	Report on voting
110/972/DTR	110/988A/RVDTR

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62977 series, published under the general title *Electronic displays*, can be found on the IEC website.

Future standards in this series will carry the new general title as cited above. Titles of existing standards in this series will be updated at the time of the next edition.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**ITeH STANDARD PREVIEW**  
**(standards.iteh.ai)**

A bilingual version of this publication may be issued at a later date.

## ELECTRONIC DISPLAYS –

### Part 2-4: Transparent displays – Overview of application scenarios

#### 1 Scope

This part of IEC 62977, which is a Technical Report, provides a comprehensive overview of application scenarios for transparent displays of the two major display technologies (liquid crystal (LC) and organic light emitting diode (OLED) displays) and introduces the observation and illumination aspects that are taken into account for the establishment of appropriate measurement methods.

This document only considers direct view displays, it does not include projection displays (eye-projection and projection to screens.)

#### 2 Normative references

There are no normative references in this document.

#### 3 Terms, definitions and abbreviated terms

For the purposes of this document, the following terms, definitions and abbreviated terms apply.

<https://standards.iteh.ai/catalog/standards/sist/04860d59-9f44-43f8-acc9-49457b008ebf/iec-tr-62977-2-4-2018>

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

##### 3.1 Terms and definitions

###### 3.1.1

###### AR

###### augmented reality

overlay of real objects and scenes with artificial visual information

###### 3.1.2

###### intended visual information

visual information to be presented intentionally

Note 1 to entry: Visual information that is not intended can sometimes be observed, for example reflection of ambient images.

###### 3.1.3

###### unwanted contributions from ambient light

visual information that is unintentionally generated (by e.g. reflection of ambient light sources) and superimposed over the intended visual information, thus creating disturbing visual effects

### 3.1.4

#### **on-screen contrast**

contrast created by the display screen by emission or absorption (transmission), including the background light transmitted and reflected light, when measured in an ambient lighting environment

### 3.1.5

#### **through-screen contrast**

contrast of the object or scene behind the transparent display, mainly affected by the transmissive properties of the transparent display screen, which can also include the background reflected light and transmitted light outside the regular direction when measured in an ambient lighting environment

## 3.2 Abbreviated terms

AR	augmented reality
CIE	Commission Internationale de l'Eclairage (International Commission on Illumination)
LC	liquid crystal
LCD	liquid crystal display
OLED	organic light emitting diode
TBLU	transparent back-light unit
TDS	transparent display screen
VR	virtual reality

ITEH STANDARD PREVIEW  
(standards.iteh.ai)

## 4 Application scenarios

[IEC TR 62977-2-4:2018](#)

### 4.1 General <https://standards.iteh.ai/catalog/standards/sist/04860d59-9f44-43f8-acc9-49457b008ebf/iec-tr-62977-2-4-2018>

Transparent displays are considered, for example, for advertising purposes (shop-windows and showcases, also in combination with touch-screens) and for other similar applications (e.g. refrigerator doors) where real scenes and objects are overlaid with additional visual information just as in the case of augmented reality (AR). In airplanes and automobiles head-up displays are used to present visual information on top of the surrounding scenery. Those head-up displays, however, use projection optics to display visual information at a certain distance in front of the observer, so usually no refocusing is required.

Transparent displays may also be realized by a reflective or transmissive screen on which visual information is being projected, but this case is not considered in this document.

### 4.2 Performance aspects

Two cases have to be distinguished for the performance of transparent displays:

- 1) on-screen performance with visual information generated by emission (OLED display) or transmission (LC display),
- 2) through-screen (see-through) performance with objects or a scenery located behind the transparent display screen.

NOTE 1 RGB-LCDs with colour filters have transmittance levels in the range of 5 % up to 25 % (RWGWBW), so the objects and the scene behind the display are usually illuminated with high intensity to be sufficiently visible.

NOTE 2 Scattering of the transparent display can cause excessive haze, which reduces contrast. In addition, pixel fill-factor effects can cause blurring of objects or the scene behind the screen (blurring means spatial low-pass filtering).

On-screen performance of transparent displays is generally hampered by the mixing of the scene behind the display with the visual information content shown on the display.

Transparent display screens realized with LCDs can comprise a transparent back-light unit or, alternatively, they can simply utilize available ambient illuminance and thus do not include a back-light.

### 4.3 Application cases

Table 1 illustrates four typical application cases for transparent displays (case 1 through 4). Each case contains two illumination sources, one on the side of the observer and one behind the transparent display screen. The light source on the side of the object or the scene provides illumination for the objects, and the scenery and light reflected by those is transmitted by the TDS and seen by the observer. At the same time, light from this source that is directly transmitted or reflected by the TDS can reduce contrast and colour saturation of the objects and the scenery behind the TDS, thus negatively affecting the intended visual information. Additionally, light reflected by the light source that is located on the side of the observer can also contribute to a deterioration of the intended visual information.

Outdoor illuminance levels are typically two orders of magnitude higher than indoor illuminance levels (Table 1, cases 3 and 4), thus possibly contributing high levels of unwanted reflected light and correspondingly a high degree of degradation of contrast and colour saturation.

The focus of the observer can be on the transparent display screen for observation of on-screen information or on the objects or scenery behind that display for observation of through-screen information.

Objects behind the TDS are illuminated by a light source, and parts of the reflected light are transmitted by the TDS (case 1) and are seen by the observer. This is the intended visual information. Light from both sources (behind and in front of the TDS) that is directly transmitted and/or reflected by the TDS is added to the intended visual information (case 2) and reduces contrast and colour saturation.

**iTeh STANDARD PREVIEW**  
(standardsite.com)  
IEC TR 62977-2-4:2018  
<https://standards.iteh.ai/catalog/standards/sist/04860d59-9f44-43f8-acc9-49457b008ebf/iec-tr-62977-2-4-2018>

**Table 1 – Application cases**

1	<p>Indoors TDS Indoors</p> <p>IEC</p>	Indoor showcase seen through a transparent display by an indoor observer (e.g. refrigerator)
2	<p>Outdoors TDS Indoors</p> <p>IEC</p>	Outdoor objects or scene seen through a transparent display by an indoor observer
3	<p>Indoors TDS Outdoors</p> <p>IEC</p>	Indoor showcase seen through a transparent display by an outdoor observer
4	<p>Outdoors TDS Outdoors</p> <p>IEC</p>	Outdoor objects or scene seen through a transparent display by an outdoor observer

#### 4.4 Intended visual information and unwanted contributions from ambient light

##### 4.4.1 General

Visual information is provided to the observer by contrast, which is given by the difference of two adjacent areas with respect to luminance and/or chromaticity.

##### 4.4.2 Visual information on screen

The first set of visual information is generated on a transparent display by lateral modulation of light by the processes of light emission (OLED) or absorption of transmitted light (LCD). This is the "on-screen" case.
