UDC 629.11.012.5 : 631.3

Ref. No. ISO 4251/2-1984 (E)

Descriptors : agricultural machinery, tractors, tyres, pneumatic tyres, rims, loads (forces), load capacity.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

iTeh STANDARD PREVIEW (standards.iteh.ai)

International Standard ISO 4251/2 was prepared by Technical Committee ISO/TC 31,
Tyres, rims and valves.

ISO 4251/2 was first published in 1980. This second edition ~~cancels and replaces the first edition, to which a new text in subclause 3.3, a further footnote to table 3 and minor changes to table 12 have been added.~~ <https://standards.iteh.ai/catalog/standards/std/cd871158-0e84-4248-95fa-74b2669545be/iso-4251-2-1984>

Tyres and rims (existing series) for agricultural tractors and machines — Part 2 : Tyre load ratings

1 Scope and field of application

This part of ISO 4251 sets out load ratings for existing series of tyres for agricultural tractors and machines.

Tyre designation and dimensions, rim dimensions, and tyre classification and nomenclature are given in ISO 4251/1, ISO 4251/3 and ISO 4251/4 respectively.

ITeH STANDARD PREVIEW (standards.iteh.ai)

b) table 5 for tyres of diagonal construction with low section height.

Loads for tyres of diagonal and radial construction for special cultivation work and corresponding inflation pressures are given in :

a) table 6 for a maximum speed of 30 km/h;

b) table 7 for cultivation work at a maximum speed of 8 km/h.

2 Load — Inflation pressure relationship

The loads given in the tables of this part of ISO 4251 are maximum values and are valid for the inflation pressures indicated.

3 Tyre loads

3.1 Agricultural drive wheels — Tractor tyres

Basic tyre loads for a maximum speed of 30 km/h, and corresponding inflation pressures are given in :

- table 1 for tyres of diagonal and radial construction with normal section height;
- table 2 for tyres of diagonal construction with low section height.

Tyre loads at different speeds (load-speed relationship) are given in table 3 for tyres of diagonal and radial construction with normal section height and tyres of diagonal construction with low section height.

Loads for tyres in dual applications for a maximum speed of 30 km/h, and corresponding inflation pressures are given in :

- table 4 for tyres of diagonal and radial construction with normal section height;

3.2 Agricultural steering wheels — Tractor tyres

Basic tyre loads for a maximum speed of 30 km/h, and corresponding inflation pressures are given in :

- table 8 for tyres of diagonal construction with normal section height;
- table 9 for tyres of diagonal construction with low section height.

Tyre loads at different speeds (load-speed relationship) are given in table 10 for tyres of diagonal construction with normal and low section.

3.3 Agricultural implement tyres

Basic tyre loads for a maximum speed of 30 km/h, tyre loads for other speeds and special applications and corresponding inflation pressures are specified in

- table 11 for tyres of diagonal construction with normal section height;
- table 12 for tyres of diagonal construction with low section height.

Table 1 — Agricultural drive wheels — Tractor tyres (diagonal and radial construction — normal section height) — Basic tyre loads (BTL) for a maximum speed of 30 km/h and inflation pressures (IP)

1) The values given for the maximum tyre loads also apply when drive wheel tractor tyres are fitted on the front axles (steering wheels).

2) Expressed as a percentage of the basic tyre loads given in tables 1 and 2. If national legislation permits speeds in excess of 30 km/h, for example up to 40 km/h, a tyre load of 90 % of the basic tyre load shall be permitted at a speed of 35 km/h, and a tyre load of 80 % of the basic tyre load shall be permitted at a speed of 40 km/h. Tyres intended for higher speeds, for example multipurpose applications (MPT), will form the subject of a future International Standard.

3) This applies to drive wheel tractor tyres fitted on front axles of front-end loaders used in intermittent service. Tyre inflation pressures have to be increased by 30 kPa for operating at these overloads.

4) On combine harvesters in cyclic loading service, except hillside combines, a load of up to 150 % of the basic tyre loads given in tables 1 and 2 is permitted for speeds up to 8 km/h with an inflation pressure increase of approximately 25 % (consult the tyre manufacturers).

The wheel and rim manufacturers should be consulted concerning the strength of the wheels.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

1) For speeds up to a maximum of 8 km/h, loads may be increased by 20 % with an inflation pressure increase of up to 30 % (consult tyre and rim manufacturers).

<https://standards.iteh.ai/catalog/standards/sist/ed871f58-0e84-4248-95fa-000000000000>

2) On agricultural trailers operated on improved surfaces at speeds up to a maximum of 30 km/h, loads may be increased by 20 % with a 30 % increase in inflation pressure where national standardization does not impose restrictions (consult tyre and rim manufacturers).

1) For speeds up to a maximum of 8 km/h, loads may be increased by 20 % with an inflation pressure increase of up to 30 % (consult tyre and rim manufacturers).

2) On agricultural trailers operated on improved surfaces at speeds up to a maximum of 30 km/h, loads may be increased by 20 % with a 30 % increase in inflation pressure where national standardization does not impose restrictions (consult tyre and rim manufacturers).
