#### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

### IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online 6and 4-67,0000 electrotechnical terminology entries in English and once a month by email. https://standards.iteh.ai/catalog/standard

IEC Customer Service Centre - webstore.fec.en/cscb9d1/iec-6 If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22,000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (EV) online. 21

#### IEC Glossary - std.iec.ch/glossary

French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

#### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

### Recherche de publications IEC -

#### webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

### Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

#### Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

### Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>IEC 60794-6-30:2020</u> https://standards.iteh.ai/catalog/standards/sist/6b00ed8e-dec0-4507-929a-6a49c199b9d1/iec-60794-6-30-2020 - 4 -

### INTERNATIONAL ELECTROTECHNICAL COMMISSION

### **OPTICAL FIBRE CABLES –**

### Part 6-30: Indoor-outdoor cables – Family specification for weatherised indoor cables

### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies. 194-6-30-2020
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60794-6-30 has been prepared by subcommittee SC86A: Fibres and cables, of IEC technical committee 86: Fibre optics.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
86A/2038/FDIS	86A/2049/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60794 series, published under the general title *Optical fibre cables*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>IEC 60794-6-30:2020</u> https://standards.iteh.ai/catalog/standards/sist/6b00ed8e-dec0-4507-929a-6a49c199b9d1/iec-60794-6-30-2020

### **OPTICAL FIBRE CABLES –**

### Part 6-30: Indoor-outdoor cables – Family specification for weatherised indoor cables

### 1 Scope

This part of IEC 60794 is a family specification covering optical fibre indoor cables that are deployed in short length ( $\leq$  10 m) outdoor environments. These cables generally possess the characteristics associated with indoor cable designs having the appropriate fire performance and flexibility that makes them suitable for use in premises. Because of its predicted use outdoors, stability against environmental attack, for example UV radiation and humidity (see IEC 60794-6:2020, Table 1), is important. Typical application spaces include the extension of a short length of indoor cable outside the building such as to a NAP mounted outside the building at the house wall.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies. (standards.iteh.ai)

### iTeh STANDARD PREVIEW

### 3 Terms, definitions and abbreviated terms ten ai)

For the purposes of this document, the terms, definitions and abbreviated terms given in IEC 60794-1-1 and the following apply standards/standards

### 6a49c199b9d1/iec-60794-6-30-2020

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at http://www.electropedia.org/
- ISO Online browsing platform: available at http://www.iso.org/obp

### 3.1 Terms and definitions

No terms and definitions are listed in this document.

### 3.2 Abbreviated terms

NAP network access point

HFFR halogen free flame retardant

### 4 General specifications

### 4.1 Optical fibres

The optical fibre shall conform to the requirements of IEC 60793-2-10 or IEC 60793-2-50. The fibre type shall be agreed between the customer and supplier. The cabled fibre shall conform to IEC 60794-2.

### 4.2 Cable elements

The cable elements shall conform to IEC 60794-2.

### 5 Specifications for weatherised indoor cables – Construction

The cable design can be derived from a typical indoor cable design according to the product specifications described in IEC 60794-2. The specific demand related to UV resistance and resistance against humidity will require the appropriate selection of the jacket material in combination with other material and/or design considerations. See Annex A for examples of weatherised indoor cables.

## 6 Details of family specifications and test conditions for weatherised indoor cables

### 6.1 General

### 6.1.1 Referenced cable specifications

The specific specifications will depend on the specific design of the indoor cable which was selected as basis for the design of the weatherised indoor cable. The appropriate family specifications from IEC 60794-2 (all parts) should be referenced for mechanical (IEC 60794-2-10:2011, 5.3, IEC 60794-2-20:2013, 4.3, and IEC 60794-2-30:2019, 5.3) and environmental specifications (IEC 60794-2-10:2011, 5.4, IEC 60794-2-20:2013, 4.4, and IEC 60794-2-30:2019, 5.4). Additional design characteristics for outdoor exposure to UV radiation should reference IEC 60794-1-22, method F14. Test methods are defined in the generic specifications IEC 60794-1-21, IEC 60794-1-22, IEC 60794-1-23 and IEC 60794-1-24.

### 6.1.2 Test criteria iTeh STANDARD PREVIEW

### 6.1.3 Applicable tests (standards.iteh.ai)

The cable types defined in these referenced  $EC_{607945}$  family specifications are simplex and duplex cables, multi-fibre cables, and ribbon cables. Family requirements and test conditions in 6.2 through 6.5 apply to these types as noted. If no differentiation is stated in the subclause, they apply to all cable types.

Compliance with the specification shall be verified by carrying out tests selected from Table 1. It is not intended that all tests in Table 1 be carried out in all cases. The tests to be applied and the frequency of testing shall be agreed between the customer and supplier.

Mechanical tests       Typically required of most cardesigns         Tensile performance       See 6.2.1       IEC 60794-1-21, method E1         Abrasion       See 6.2.2       IEC 60794-1-21, method E2B         Crush       See 6.2.3       IEC 60794-1-21, method E2B         Crush       See 6.2.3       IEC 60794-1-21, method E3A         Impact       See 6.2.4       IEC 60794-1-21, method E4         Repeated bending       See 6.2.5       IEC 60794-1-21, method E6         Torsion       See 6.2.6       IEC 60794-1-21, method E6         Bend       See 6.2.7       IEC 60794-1-21, method E1         Bending under tension       See 6.2.8       IEC 60794-1-21, method E1         Bending under tension       See 6.2.9       IEC 60794-1-21, method E11A         IFC 60794-1-21, method E18A procedure1)       See 6.2.8       IEC 60794-1-21, method E11A         Bending under tension       See 6.2.8       IEC 60794-1-21, method E11A         IFC 60794-1-21, method E18A procedure1)       IEC 60794-1-21, method E11A         IFC 60794-1-21, method E11A       IFC 60794-1-21, method E11A         IFC 60794-1-21, IEC 60794-1-21, method E11A       IFC 60794-1-21, method E10         IFExing       See 6.2.11       IEC 60794-1-21, method E10       Cable kink         IFExing       See 6.2.12

### 6.2 Mechanical tests

### 6.2.1 Tensile performance

a) Family specifications

While the cable is under short-term tensile load ( $T_{\rm M}$ , rated tensile load),

- the axial fibre strain shall be < 60 % of the fibre proof strain, and
- the attenuation shall be measured and recorded. Any required max. change of attenuation shall be agreed between customer and supplier.

While the cable is under the long-term tensile load ( $T_{\rm L}$ , residual load),

- the axial fibre strain shall be:
  - < 20 % of fibre proof test, for fibre proof tested to  $\leq$  1 % strain (e.g., 0,69 GPa, 0,2 % absolute strain), and

< 17 % of fibre proof test, for fibre proof tested to greater than 1 % to 2 % strain (e.g., 0,69 GPa to 1,38 GPa, 0,34 % absolute strain for 2 % proof tested fibre);</li>

NOTE For fibres proof tested at levels above 1 % strain, the safe long-term load will not scale linearly with proof strain, so a lower percentage of the proof stain is applicable. There is no agreement for strain limits for proof tests above 2 % strain.

- the change in attenuation shall be:
  - single-mode fibre: no change;
  - multimode fibre:  $\leq 0,2 \text{ dB}.$

Under visual examination without magnification, there shall be no damage to the sheath or to the cable elements after the test.

b) Test conditions (simplex and duplex cables)

Method:	IEC 60794-1-21, method E1
Load: 75 N applied for 10 min for simplex cables and norm cables 150 N for 10 min for duplex cables which c independent simplex cables	
Diameter of chuck drums and transfer devices:	Not less than 250 mm
Rate of transfer device:	Either 100 mm/min or 100 N/min
Length of sample.	Sufficient to achieve the desired accuracy of measurement of

Length of sample: Sufficient to achieve the desired accuracy of measurement of attenuation change and shall be agreed between customer and supplier.

### c) Test conditions (multi fibre cables) NDARD PREVIEW

	,	,
	Method:	IEC 60794-1-21; method E1.ai)
	Load and duration:	400 N or the weight of 1 km of cable, whichever is greater and for a minimum of 5 min 30:2020
	Diameter of chuck drums and transfer devices:	Not smaller than the minimum bending diameter specified for the cable under load
	Velocity of transfer device	e: Either 100 mm/min or 100 N/min
	Length of sample:	Sufficient to achieve the desired accuracy of measurement of attenuation change (typically 300 m) and shall be agreed between customer and supplier.
d)	Test conditions (fibre ribb	oon cables)
	Method:	IEC 60794-1-21, method E1
	Load and duration:	400 N, applied for a minimum of 5 min
	Diameter of chuck drums and transfer devices:	Not smaller than the minimum bending diameter specified for the cable under load
	Velocity of transfer device	e: Either 100 mm/min or 100 N/min
	1	

Length of sample: Sufficient to achieve the desired accuracy of measurement of attenuation change (typically 300 m) and shall be agreed between customer and supplier.

### 6.2.2 Abrasion

a) Family specifications

Sheath abrasion resistance: There shall be no perforation of the sheath after performing the needle test according to method E2A of IEC 60794-1-21.

Cable marking abrasion: The print shall be legible after the test performed according to method E2B of IEC 60794-1-21 (felt test).

b) Test conditions (sheath abrasion resistance)

Method: IEC 60794-1-21, method E2A

Load: 2 N

Number of cycles: 50

NOTE Other loads and number of cycles can be agreed between customer and supplier.

c) Test conditions (cable marking resistance)

Method: IEC 60794-1-21, method E2B, method 2

Load: 4 N

Number of cycles: 3

NOTE Other loads and number of cycles can be agreed between customer and supplier.

### 6.2.3 Crush

a) Family specifications

Under the short term load (installation test), the attenuation change shall not exceed

- 0,15 dB for single-mode fibres;
- 0,30 dB for multimode fibres.

At the end of the long term loading (operational test), before releasing the load, there shall be no change in attenuation from the initial value(s) (for multi fibre cables).

There shall be no visible damage to the cable elements.

- b) Test conditions (simplex and duplex cables)
  - Method:
     IEC 60794-1-21, method E3A

     Load:
     500 N
  - Duration: iTeh STAMDARD PREVIEW
  - Length between test locations; 500 mm rds iteh ai)

NOTE In the case of flat cables, the force is applied on the flat sides of the cable.

c) Test conditions (multi fibre cables) IEC 60794-6-30:2020

- /	(	
	Method: https://standards.iteh.	ajetalog/standards/sist/6600ed8eeds0-4507-929a- 49c199b9d1/iec-60794-6-30-2020
	Force during installation:	500 N
	Duration during installation:	1 min
	Force during operation:	300 N
	Duration during operation:	15 min
	Length between test locations:	500 mm
d)	Test conditions (fibre ribbon ca	bles)

Method:	IEC 60794-1-21, method E3A
Force:	500 N
Duration:	1 min

Length between test locations: 500 mm

### 6.2.4 Impact

a) Family specifications

No fibre break

b) Test conditions (simplex and duplex cables, multi fibre cables, fibre ribbon cables)

Method:	IEC 60794-1-21, method E4
---------	---------------------------

Impact energy:	1,0 J
----------------	-------

Radius of striking surface: 12,5 mm Number of impacts: at least 3

Length between test locations: 500 mm

### 6.2.5 Repeated bending

a) Family specifications

Simplex and duplex cables, multifibre cables, ribbon cables: There shall be no damage to the sheath and to the cable elements as well as no fibre breakage

b) Test conditions (simplex cables and duplex cables)

Method:	IEC 60794-1-21, method E6
Bending radius:	20 times cable diameter
Number of cycles:	100
Mass of weight:	2 kg

- c) Test conditions (multi fibre cables) Method: IEC 60794-1-21, method E6
  - Bending radius: 20 times cable diameter

Number of cycles: 100

Mass of weight: 4 kg

- d) Test conditions (fibre ribbon cables)
  Method: IEC 60794-1-21, method E6
  Bending radius: 100 mm
  Number of cycles: 100
  Mass of weight: 4 kgeh STANDARD PREVIEW
- 6.2.6 Torsion

### (standards.iteh.ai)

a) Family specifications

There shall be no damage to the sheath and to the cable elements as well as no fibre breakage. breakage. 6a49c199b9d1/iec-60794-6-30-2020

b) Test conditions (simplex and duplex cables)

,		
	Method:	IEC 60794-1-21, method E7
	Number of cycles:	3
	Distance between fixed and rotation clamp:	125 times cable diameter but no more than 1 m.
	Tension load:	20 N
c)	Test conditions (Multi fibre cables)	
	Method:	IEC 60794-1-21, method E7
	Number of cycles:	10
	Distance between fixed and rotation clamp:	125 times cable diameter. However max. 2,0 m
	Tension load:	20 N
d)	Test conditions (Fibre ribbon cables)	
	Method:	IEC 60794-1-21, method E7
	Number of cycles:	20
	Distance between fixed and rotation clamp:	250 mm
	Tension load:	20 N

### 6.2.7 Bend

a) Family specifications

No change in attenuation after the test, and there shall be no visible damage to the cable elements.
