

Designation: B804 – 02 (Reapproved 2018)

Standard Specification for UNS N08367 and UNS N08926 Welded Pipe¹

This standard is issued under the fixed designation B804; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers UNS N08367 and UNS N08926 welded pipe for general corrosion applications. (Although no restrictions are placed on the sizes of pipe that may be furnished under this specification, commercial practice is commonly limited to sizes not less than 8 in. nominal diameter.)

1.2 Six classes of pipe are covered as follows:

1.2.1 Class 1 pipe shall be double welded by processes employing filler metal in all passes and shall be completely radiographed.

1.2.2 Class 2 pipe shall be double welded by processes employing filler metal in all passes. No radiography is required.

1.2.3 Class 3 pipe shall be double welded by processes employing filler metal in all passes except the inside root weld may be made without the addition of filler metal. Welds are to be completely radiographed.

1.2.4 Class 4 pipe shall be double welded by processes employing filler metal in all passes except the inside root weld may be made without the addition of filler metal. No radiography is required.

1.2.5 Class 5 pipe shall be single welded by processes employing filler metal in all passes except that the pass exposed to the inside pipe surface may be made without the addition of filler metal. Welds are to be completely radiographed.

1.2.6 Class 6 pipe shall be single welded by processes employing filler metal in all passes except that the pass exposed to the inside pipe surface may be made without the addition of filler metal. No radiography is required.

1.3 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.4 The following safety hazards caveat pertains only to the test methods portion, Section 13, of this standard: *This stan-*

ard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to become familiar with all hazards including those identified in the appropriate Safety Data Sheet (SDS) for this product/material as provided by the manufacturer, to establish appropriate safety, health, and environmental practices, and determine the applicability of regulatory limitations prior to use.

1.5 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

3. Terminology

3.1 Terms defined in Terminology B899 shall apply unless otherwise defined in this standard.

4. Ordering Information

4.1 It is the responsibility of the purchaser to specify all requirements that are necessary for material ordered under this specification. Examples of such requirements include, but are not limited to, the following:

- 4.1.1 Quantity (feet or number of lengths),
- 4.1.2 Class (see 1.2),
- 4.1.3 Size (outside diameter and minimum wall thickness),
- 4.1.4 Length (specific or random),
- 4.1.5 ASTM specification number,
- 4.1.6 Authorization for repair of plate defects by welding without prior approval if such is intended (see 9.4),
- 4.1.7 Circumferential weld permissibility (see 8.3.2), and
- 4.1.8 Supplementary requirements.

5. Materials and Manufacture

5.1 Materials—The starting material shall conform to the requirements of Specification B688 for UNS N08367 and Specification B625 for UNS N08926.

5.2 Manufacture:

5.2.1 The joints shall be double or single welded, full penetration welds made in accordance with ASME Boiler and Pressure Vessel Code, Section IX.

5.2.2 The welds shall be made either manually or automatically by an electric process involving the deposition of filler metal according to the class specified.

⁴ Available from American Society of Mechanical Engineers (ASME), ASME International Headquarters, Three Park Ave., New York, NY 10016-5990, http://www.asme.org.

⁵ Available from American Welding Society (AWS), 550 NW LeJeune Rd., Miami, FL 33126, http://www.aws.org.

5.2.3 The weld surface on either side of the weld shall be flush with the base plate or shall have a reasonably uniform crown, not to exceed 1/8 in. (3.2 mm). Any weld reinforcement may be removed at the manufacturer’s option or by agreement between the manufacturer and purchaser. The contour of the reinforcement shall be reasonably smooth and free of irregularities. The deposited metal shall be fused uniformly into the plate surface. No concavity of contour is permitted unless the resulting thickness of weld metal is equal to or greater than the minimum thickness of the adjacent base metal.

5.2.4 Weld defects shall be repaired by removal to sound metal and rewelding. Subsequent heat treatment and inspection shall be as required on the original welds.

5.3 Heat Treatment—The recommended heat treatment shall consist of heating to a minimum temperature of 2025°F for UNS N08367 and 2012°F for UNS N08926 followed by quenching in water or rapidly cooling by other means.

6. Chemical Composition

6.1 The chemical composition of the pipe shall conform to the requirements in Table 1 of Specification B688 for UNS N08367 and Table 1 of Specification B625 for UNS N08926.

6.2 The alloy content of the deposited weld metal shall conform to that required for the plate or the welding electrodes as shown in Specification AWS A5.11 for ENiCrMo-3, ENiCrMo-4, and ENiCrMo-10 or AWS A5.14 for ERNiCrMo-10, ERNiCrMo-3, and ERNiCrMo-4.

6.3 If product analysis is made of the plate or weld metal by the purchaser, the chemical composition thus determined shall conform to the requirements specified in 6.1 and 6.2 subject to the permissible tolerances in Specification B880.

7. Mechanical Properties and Other Requirements

7.1 Mechanical Properties:

7.1.1 The mechanical properties of the plate shall be in accordance with Table 1. Tension tests made by the plate manufacturer shall qualify the plate material.

7.1.2 Transverse tension tests taken across the welded joint shall have the same minimum ultimate tensile strength as the specified minimum ultimate tensile strength of the plate.

7.2 Transverse Guided Weld Bend Test Requirements—Bends made in accordance with Fig. 1 shall be acceptable if no cracks or other imperfections exceeding 1/8 in. (3.2 mm) in any direction are present in the weld metal or between the weld and the pipe metal after bending. Cracks that originate along the

FIG. 1 Guided-Bend Test Jig

edges of the specimen during testing, and that are less than $\frac{1}{4}$ in. (6.3 mm) measured in any direction, shall not be considered.

7.3 Pressure Test—Any pipe that shows leaks during the pressure test conducted in accordance with 13.4 shall be rejected, but any leaking areas may be cut out and the pipe retested as above.

7.4 Radiographic Examination—For Classes 1, 3, and 5 pipe, radiographic examination shall be in accordance with the requirements of the *ASME Boiler and Pressure Vessel Code*, Section VIII, latest edition, Paragraph UW-51.

8. Dimensions, Mass, and Permissible Variations

8.1 Permissible variations in dimensions at any point in a length of pipe shall not exceed the following:

8.1.1 **Outside Diameter**—Based on circumferential measurement, $\pm 0.5\%$ of the nominal outside diameter.

8.1.2 **Out-of-Roundness**—Differences between major and minor outside diameters, 1.0 % of the specified outside diameter.

8.1.3 **Alignment (Camber)**—Using a 10-ft (3-m) straight-edge placed so that both ends are in contact with the pipe, the camber shall not be more than $\frac{1}{8}$ in. (3.17 mm).

8.2 **Thickness**—The minimum wall thickness at any point in the pipe shall not be more than 0.01 in. (0.25 mm) under the nominal thickness.

8.3 Lengths:

8.3.1 The lengths required shall be specified in the orders.

8.3.2 Circumferentially welded joints of the same quality as the longitudinal joints shall be permitted by agreement between the manufacturer and the purchaser.

9. Workmanship, Finish, and Appearance

9.1 Pipe shall be furnished with smooth ends, free of burrs.

9.2 The finished pipe shall be free of injurious defects and shall have a workmanlike finish.

9.3 **Repair of Plate Defects by Machining or Grinding**—Pipe showing moderate slivers may be machined or ground inside or outside to a depth that shall ensure the removal of all included scale and slivers, provided the wall thickness is not reduced below the specified minimum wall thickness. Machining or grinding shall follow inspection of the pipe as rolled and shall be followed by supplementary visual inspection.

9.4 **Repair of Plate Defects by Welding**—Repair of injurious defects shall be permitted only with the approval of the purchaser. Defects shall be thoroughly chipped out before welding. The repairs shall be radiographed and if the pipe itself has already been heat treated, it shall then be heat treated again except in the case of small welds that, in the estimation of the purchaser's inspector, do not require heat treatment. Each length of pipe repaired in this manner shall be hydrostatically tested after being repaired.

9.5 The pipe shall be sandblasted or pickled to remove all scale and then passivated.
