About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22,000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67,000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**CONNECTORS FOR ELECTRICAL AND ELECTRONIC EQUIPMENT –
TESTS AND MEASUREMENTS –****Part 11-1: Climatic tests – Test 11a – Climatic sequence**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60512-11-1 has been prepared by sub-committee 48B: Electrical connectors, of IEC technical committee 48: Electrical connectors and mechanical structures for electrical and electronic equipment.

This second edition cancels and replaces the first edition published in 1995. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) formatting and clause numbering according to the latest IEC template and the latest IEC 60512-1-101 blank detail (tests and measurements) specification;
- b) update and expansion of normative references;
- c) better specification of various details regarding tests.

The text of this International Standard is based on the following documents:

CDV	Report on voting
48B/2688/CDV	48B/2722/RVC

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

Future standards in this series will carry the new general title as cited above. Titles of existing standards in this series will be updated at the time of the next edition.

A list of all parts in the IEC 60512 series, published under the general title *Connectors for electrical and electronic equipment – Tests and measurements*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under “<http://webstore.iec.ch>” in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

This part of IEC 60512 provides a standard test method for electrical connectors based upon IEC 60068-2-61, which is referenced as a basis.

The value of a sequence of climatic tests, particularly for the testing of components, has been witnessed a long time ago by the inclusion of a “climatic sequence” in IEC 60068-1 (in the 2013 edition, it is covered in Clause 6, with guidance in Annex B).

With the increasing importance of the IEC Quality Assessment System for Electronic Components (IECQ) it had become necessary to define that test sequence more precisely than could be done therein, with the object of providing for satisfactory reproducibility of the test.

IEC 60068-2-61 was then established by IEC TC 104, describing in detail a composite test specifying a “climatic sequence” for specimens of products, primarily components, that is based on Clause 6 of IEC 60068-1:2013, and it includes guidance in informative annexes for specification writers and those performing the test.

Test Z/ABDM of IEC 60068-2-61 is a “composite test” as defined in IEC 60068-1 rather than a “sequence” as defined in the same standard. Because of the well-established use of “sequence” in references to Clause 6 of IEC 60068-1:2013, TC 104 decided that “sequence” should have continued to be used in referring to the operations in this composite test. This document also adheres to this decision.

This part of IEC 60512 tailors the above mentioned general-purpose composite climatic test to the specific needs of electrical connectors.

STANDARD PREVIEW
(standards.iteh.ai)

IEC 60512-11-1:2019
<https://standards.iteh.ai/catalog/standards/sist/f6235196-bc79-46d4-bc7b-9b418574ba9c/iec-60512-11-1-2019>

CONNECTORS FOR ELECTRICAL AND ELECTRONIC EQUIPMENT – TESTS AND MEASUREMENTS –

Part 11-1: Climatic tests – Test 11a – Climatic sequence

1 Scope

This part of IEC 60512, when required by the detail (product) specification, is used for testing connectors within the scope of IEC technical committee 48. This test may also be used for similar devices (i.e. when the degradation mechanisms are the same) when specified in a detail (product) specification.

The object of this test is to define a standard test method to assess the ability of connectors to function in a specified manner, in a specified environment which might be encountered during normal use, including storage.

This document provides a standard composite test method for determining the suitability of connectors when subjected to environmental conditions consisting of a sequence of temperature, humidity and, where required, low air pressure environmental stresses.

The order of application of the stresses and the conditions for the change from one step to the next have been chosen to accelerate, amplify and allow potential interactions of degradation mechanisms of the same type as those observed under natural climatic conditions.

In this composite test, connector specimens are exposed to environmental tests in a standard order and categorized according to their climatic category as assigned by the detail (product) specification, except that the third group of digits is used as an indication of the number of cycles in step 5 of the damp heat cyclic test according to IEC 60512-11-12.

Where any modification is necessary, the relevant connector detail (product) specification provides the necessary information for each step in the method.

This test is frequently specified to follow other tests involving mechanical stress, for example tests for robustness of terminations, solderability, shock and vibration, as a means of determining whether the sealing of the specimen has been damaged.

2 Normative references

3 Terms and definitions

For the purposes of this document, the terms and definitions of IEC 60512-1 and IEC 60512-1-101 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

4 Preparations

4.1 Test equipment

The test equipment required to carry out this test is that required for carrying out each of the individual tests, including variants and methods, with the required severities prescribed for the sequence.

When using a single test chamber in which the conditions specified for the different steps in the sequence are successively established, special care is necessary (see Clause B.3 in IEC 60068-2-61:1991).

The use of a test chamber with automatic transfer of the specimen between compartments can, in general, be regarded as equivalent to the use of separate test chambers. Also, with test chambers with automatic transfer, it should be ensured that the recovery conditions at the end of each step are satisfied, particularly for step 2 (see 8.2.2 of IEC 60068-2-61:1991).

4.2 Preparation of the specimen

Unless otherwise specified, the number of specimens specified by the detail (product) specification shall be tested in the as-received condition.

4.3 Mounting of specimen

The specimen, equipped with any accessories normally supplied with the connector, shall be mounted and wired in accordance with the detail (product) specification, as appropriate.

When required by the detail (product) specification, the specimen shall be operated the number of times specified prior to test.

For each of the individual tests carried out in this composite test, the detail (product) specification shall specify the condition of the specimen, for example operated or non-operated, mated or unmated.

5 Test method

5.1 Preconditioning

The duration of the preconditioning shall be at least 1 h under standard atmospheric conditions for testing as defined in IEC 60068-1.

5.2 Initial measurements

Initial measurements shall be carried out in accordance with the detail (product) specification. The specimen shall be submitted to the visual, dimensional and functional checks prescribed therein.

5.3 Tests (conditioning)

5.3.1 General

The test sequence shall be carried out according to IEC 60068-2-61:1991, Test Z/ABDM: Climatic sequence, method 1.

Severity or condition of test for each of the different steps shall be as specified by the detail (product) specification.

Intermediate measurements for each of the different steps shall be carried out as specified by the detail (product) specification.

Method 1 of IEC 60068-2-61 contains five steps, of which one (step 4) is optional.

5.3.2 Step 1: dry heat

This step shall be performed in accordance with IEC 60512-11-9, test 11i (which refers to IEC 60068-2-2, test Ba).

The upper climate category temperature (i.e. the upper limiting temperature (ULT) of the connector) shall be applied.

If specified in the detail (product) specification at the end of this step and while still at high temperature (i.e. with no recovery time), the insulation resistance shall be measured using test 3a of IEC 60512-3-1.

5.3.3 Step 2: damp heat, cyclic (first cycle)

This step shall be performed in accordance with IEC 60512-11-12, test 11m (which refers to IEC 60068-2-30, test Db) unless otherwise prescribed by the relevant detail (product) specification.

5.3.4 Step 3: cold

This step shall be performed in accordance with IEC 60512-11-10, test 11j (which refers to IEC 60068-2-1, test Aa).

The lower climate category temperature (i.e. the lower limiting temperature (LLT) of the connector) shall be applied.

5.3.5 Step 4 (optional): low air pressure

This step shall be performed, when prescribed by the detail (product) specification, in accordance with IEC 60512-11-11, test 11k (which refers to IEC 60068-2-13, test M). The degree of severity to apply (pressure) shall be defined in the detail (product) specification.

The duration of the test shall be 5 min.

At the end of this test, and while still under low pressure, a voltage proof test shall be applied using test 4a of IEC 60512-4-1.
