About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22,000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67,000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**RADIATION PROTECTION INSTRUMENTATION –
RECOMMENDED CLIMATIC, ELECTROMAGNETIC AND MECHANICAL
PERFORMANCE REQUIREMENTS AND METHODS OF TESTS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62706 has been prepared by subcommittee 45B: Radiation protection instrumentation, of IEC technical committee 45: Nuclear instrumentation.

This second edition cancels and replaces the first edition, issued in 2012. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) addition of more details to selected methods of test;
- b) revised radio frequency testing requirements based on measurements made at various locations;
- c) added equipment and instrument setup guidance and recommendations.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
45B/942/FDIS	45B/947/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC 62706:2019](#)

<https://standards.iteh.ai/catalog/standards/sist/626235ee-19ab-400d-8cb1-d44a300477f1/iec-62706-2019>

INTRODUCTION

Radiation protection instrumentation including those instruments used for the detection and identification of radioactive material and radionuclides are used in many different environments. They are typically exposed to different temperatures, humidity levels, electromagnetic fields, and mechanical stresses such as shock and vibration during normal use. Radiation detection instrumentation may be worn on the body, handheld, mounted to a vehicle, transported from location to location, or installed. All the conditions associated with these very different uses are considered when developing instrument-specific requirements. To ensure consistency between standards, this climatic, electromagnetic, and mechanical performance requirements standard was established.

iTeh STANDARD PREVIEW **(standards.iteh.ai)**

RADIATION PROTECTION INSTRUMENTATION – RECOMMENDED CLIMATIC, ELECTROMAGNETIC AND MECHANICAL PERFORMANCE REQUIREMENTS AND METHODS OF TESTS

1 Scope

This document recommends the climatic, mechanical and electromagnetic performance requirements and methods of test for radiation protection instrumentation. This document also provides guidance regarding the setup of test equipment and instruments under test (IUT) for certain tests.

The object of this document is to define, for design and test purposes, the environments in which radiation protection instrumentation may be exposed. The environments addressed by this document are applicable to body-worn (e.g., personal radiation detectors, backpack, and dosimeters), handheld, transportable, mobile, and installed instrumentation.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050-395:2014, *International Electrotechnical Vocabulary (IEV) – Part 395: Nuclear instrumentation – Physical phenomena, basic concepts, instruments, systems, equipment and detectors*

[d44a300477f1/iec-62706-2019](https://standards.iteh.ai/catalog/standards/sist/626235ee-19ab-400d-8cb1-d44a300477f1/iec-62706-2019)

3 Terms and definitions, abbreviated terms and symbols, quantities and units

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60050-395, as well as the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1.1

body-worn instruments

radiation detection instruments that are worn on the trunk or the extremities of the body while being used

3.1.2

g_n

standard acceleration due to the earth's gravity, which itself varies with altitude and geographical latitude

3.1.3

handheld or portable instruments

radiation detection instruments that are used while being held

3.1.4**influence quantity**

quantity that is not the measurand but that affects the result of the measurement

[SOURCE: ISO/IEC Guide 98-3 (GUM): 2008, B.2.10]

3.1.5**influence quantity of type F**

influence quantity whose effect on the indicated value is a change in response

Note 1 to entry: "F" stands for factor: The indication due to radiation is multiplied by a factor due to the influence quantity (e.g., the indication due to ^{60}Co radiation is 1,2 times that due to ^{137}Cs radiation).

Note 2 to entry: An example of a type F influence is when an instrument's response changes as a result of the radiation energy or angle of radiation incidence.

3.1.6**influence quantity of type S**

influence quantity whose effect on the indicated value is a deviation independent of the indicated value

Note 1 to entry: "S" stands for sum: The indication is the sum of the indication due to radiation and due to the influence quantity, e.g., electromagnetic disturbance.

Note 2 to entry: An example of a type S influence includes positive or negative changes in an instrument's indication as a result of exposure to an electromagnetic disturbance or microphonic condition.

3.1.7**installed instruments**

radiation detection instruments that are permanently mounted at a location for use

3.1.8**transportable instruments**

radiation detection instruments that may be moved to different locations and do not operate while in transit

3.1.9**mobile instruments**

radiation detection instruments that are mounted to moving platforms and operate while in motion

3.2 Abbreviated terms and symbols

CISPR	Comité International Spécial des Perturbations Radioélectriques
ESD	electrostatic discharge
IUT	instrument under test
RF	radio frequency
EM	electromagnetic
DC	direct current
AC	alternating current

3.3 Quantities and units

In this document, units of the International System (SI) are used¹. The definitions of radiation quantities are given in IEC 60050-395.

¹ International Bureau of Weights and Measures: The International System of Units, 8th edition, 2006.

The following units may also be used:

- for energy: electron-volt (symbol: eV), $1 \text{ eV} = 1,602 \times 10^{-19} \text{ J}$;
- for time: years (symbol: y), days (symbol: d), hours (symbol: h), minutes (symbol: min):
- for temperature: degrees Celsius (symbol: °C), $0 \text{ °C} = 273,15 \text{ K}$.
- for acceleration: multiples of g (gravity) with $g = 9,81 \text{ m}\cdot\text{s}^{-2}$

Multiples and submultiples of SI units are used, when practicable, according to the SI system.

4 General characteristics and requirements

This document does not define the general characteristics and requirements for test systems or devices used to perform individual tests. General requirements are addressed in the instrument-specific standard.

5 General test procedure

5.1 Nature of tests

This document recommends the climatic, mechanical and electromagnetic performance requirements and methods of test for radiation protection instrumentation. The tests are based on existing IEC standards for electronic equipment and field-use experience. This document also provides guidance regarding IUT set up for individual tests that have been identified as being complicated to perform.

For a given radiation instrument specific standard, other requirements or those requirements from other instrument types may be used [IEC 62706:2019](https://standards.iteh.ai/catalog/standards/sist/626235ee-19ab-400d-8cb1-d44a300477f1/iec-62706-2019)

<https://standards.iteh.ai/catalog/standards/sist/626235ee-19ab-400d-8cb1-d44a300477f1/iec-62706-2019>

5.2 Standard test conditions

Table 1 contains the standard test conditions. Standard test conditions indicate the necessary tolerances in practical testing.

Table 1 – Standard test conditions

Influence quantity	Standard test conditions
Ambient temperature	18 °C to 25 °C
Relative humidity	< 75 %
Atmospheric pressure	86 kPa to 106,6 kPa
Electromagnetic field of external origin	Less than the lowest value that causes interference
Magnetic induction of external origin	Less than twice the induction due to the earth's magnetic field

5.3 Use of this document

5.3.1 General

This document provides the climatic, electromagnetic and mechanical performance requirements and methods of tests when developing new or revising existing standards. These requirements should be established based on the type of instrument (e.g., handheld) and its expected use (e.g., indoor or outdoor) as defined in 3.1.

5.3.2 Recommendations for influence quantities

5.3.2.1 General

Unless stated otherwise, the functional requirements established in an instrument-specific standard shall be given in terms of change in functionality (e.g., alarm activation, loss of display, etc.) or indicated reading (e.g., $\pm 15\%$ of the average reading obtained in standard conditions).

The instrument-specific standard should indicate whether an influence quantity usually acts as type S or F. The radiation level chosen for each test should be based on the type of influence quantity as described in 5.3.2.2 and 5.3.2.3. In case the type of influence quantity is unknown (S or F), then tests should be performed according to both types (S and F), i.e., according to 5.3.2.2 and 5.3.2.3.

5.3.2.2 Tests for influence quantities of type S

These tests should be performed at a dose (rate) that is low enough to ensure that an effect from the test is measurable (e.g., 10 times the lower limit of the effective range of measurement but not zero in order to be able to detect a reduction in the indication).

5.3.2.3 Tests for influence quantities of type F

For these tests, the dose (rate) chosen should be high enough to ensure that statistical fluctuations are small enough to demonstrate whether the requirement is met (e.g., at least 10 times above the lower limit of the measuring range).

5.3.3 Climatic requirements

Climatic requirements apply to different types of radiation detection instruments based on their design and expected use. The climatic requirements that apply to a specific instrument type are addressed by that instrument-specific standard. As a minimum, ambient temperature and relative humidity tests should be required for all types of radiation detection instruments. Other climatic conditions should be established as appropriate for the expected conditions of use.

The following example text may be used in an individual standard as reference to this document: "The instrument shall undergo the tests specified in IEC 62706, Clause 7, concerning the climatic requirements for [insert instrument designation here, i.e., body-worn, handheld, installed, etc.] instrumentation." It is advisable not to insert the year of publication in the normative references citing IEC 62706. Thus, the latest edition of this document will be considered.

5.3.4 Mechanical requirements

Mechanical requirements apply to different types of radiation detection instruments based on their design and expected use. The mechanical requirements that apply to a specific instrument type are addressed by that specific standard. As a minimum, vibration, mechanical shock, and impact should be required for all types of radiation detection instruments.

The following example text may be used in an individual standard as reference to this document: "The instrument shall undergo the tests specified in IEC 62706, Clause 8, concerning the mechanical requirements for [insert instrument designation here, i.e., body-worn, handheld, installed, etc.] instrumentation." It is advisable not to insert the year of publication in the normative references citing IEC 62706. Thus, the latest edition of this document will be considered.

5.3.5 Electromagnetic requirements

Electromagnetic requirements apply to different types of radiation detection instruments based on their design and expected use. The electromagnetic requirements that apply to a specific instrument type are addressed by that specific standard. As a minimum, radio frequency immunity should be required for all types of radiation detection instruments.

The following example text may be used in an individual standard as reference to this document: "The instrument shall undergo the tests specified in IEC 62706, Clause 9, concerning the electromagnetic requirements for [insert instrument designation here, i.e., body-worn, handheld, installed, etc.] instrumentation." It is advisable not to insert the year of publication in the normative references citing IEC 62706. Thus, the latest edition of this document will be considered.

5.3.6 Functionality test

A functionality test verifying that the effects from a climatic, electromagnetic, or mechanical test condition are within the instrument-specific acceptance range shall be defined in the instrument-specific standard. These tests are generally performed before, during and after electromagnetic and climatic testing (e.g., temperature and humidity), and before and after mechanical tests. Appropriate radiation sources specific to the type of IUT should be used.

Functionality tests may include the following verifications:

- Instrument readings are within a specific range before and after exposure to an influence quantity (e.g., post-test instrument readings are within $\pm x$ % of the pre-test value).
- No alarms, radionuclide identifications, increase or decrease in readings, or spurious indications are observed during exposure to an influence quantity without the presence of a radiation source.
- The instrument radionuclide identification capabilities are not degraded after exposure to an influence quantity.

5.3.7 Additional requirements and test methods

Additional or alternative requirements and methods of test may be established as appropriate for the radiation detection instrument and its expected use.

6 Radiation detection requirements

Radiation detection requirements are addressed in the instrument-specific standard.

7 Climatic requirements

7.1 General

Instruments may consist of multiple components that form a system, e.g., a dosimetry system includes the reader and individual dosimeters. Individual components may be exposed to different environments. Selection of climatic requirements shall consider the expected conditions in which each component will be used. During testing, those components that will not be exposed to an influence for example, temperature changes, may be separated from the overall system.

If the instrument can be powered by batteries and AC power, select the method that represents the manner that the instrument will most likely be powered during use. If the instrument cannot function on a single battery charge for the duration of the test and can be powered by AC, use AC power for the test. If the instrument cannot run on AC power, replace the batteries as needed throughout the test.
