Designation: B272 - 12 (Reapproved 2019)

# Standard Specification for Copper Flat Products with Finished (Rolled or Drawn) Edges (Flat Wire and Strip)<sup>1</sup>

This standard is issued under the fixed designation B272; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

# 1. Scope\*

- 1.1 This specification establishes the requirements for copper products, flat wire and strip, with rolled or drawn finished edges produced for general application.
- 1.1.1 The product is produced in UNS Copper Nos. C10100, C10200, C10300, C10500, C10700, C10800, C11000, C11040, C12200, and C14200 unless otherwise established by agreement between manufacturer and purchaser.
- 1.2 *Units*—The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units, which are provided for information only and are not considered standard.
- Note 1—When a copper other than that listed in 1.1.1 is designated by the purchaser, the resulting product shall conform to the physical, mechanical, performance, dimensional, and tolerance requirements per agreement between the manufacturer and purchaser.
- 1.3 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

#### 3. General Requirements

- 3.1 The following sections of Specification B248 constitute a part of this specification for strip products and of Specification B250/B250M for flat wire products:
  - 3.1.1 Terminology;
  - 3.1.2 Materials and Manufacture;
  - 3.1.3 Workmanship, Finish, and Appearance;
  - 3.1.4 Sampling;
  - 3.1.5 Number of Tests and Retests;
  - 3.1.6 Specimen Preparation;
  - 3.1.7 Test Methods;
  - 3.1.8 Significance of Numerical Limits;
  - 3.1.9 Inspection;
  - 3.1.10 Rejection and Rehearing;
  - 3.1.11 Certification;
  - 3.1.12 Test Reports;
  - 3.1.13 Packaging and Package Marking; and

<sup>&</sup>lt;sup>1</sup> This specification is under the jurisdiction of ASTM Committee B05 on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.02 on Rod, Bar, Wire, Shapes and Forgings.

Current edition approved April 1, 2019. Published April 2019. Originally approved in 1952. Last previous edition approved in 2012 as B272–12. DOI: 10.1520/B0272–12R19.

<sup>&</sup>lt;sup>2</sup> For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

<sup>&</sup>lt;sup>3</sup> The last approved version of this historical standard is referenced on www.astm.org.

- 3.1.14 Supplementary Requirements.
- 3.2 In addition, when a section with a title identical to that referenced in 3.1 appears in this specification, it contains additional requirements that supplement those appearing in Specification B248 or Specification B250/B250M, or both.

#### 4. Terminology

4.1 For definitions of terms related to copper and copper alloys, refer to Terminology B846.

# 5. Ordering Information

- 5.1 Include the following specified choices when placing orders for product under this specification, as applicable:
  - 5.1.1 ASTM designation and year of issue;
  - 5.1.2 Copper UNS No. designation (Section 1);
- 5.1.3 *Temper*—O61 (annealed), H00 (eight hard), H01 (quarter hard), H02 (half hard), H03 (three-quarter hard), H04 (hard), H06 (extra hard), H08 (spring) (Section 8);
  - 5.1.4 *Dimensions*—Width and thickness (Section 13);
  - 5.1.5 Quantity—Total weight, footage, or number of pieces;
- 5.1.6 *How Furnished*—Lengths, coils, spools, and so forth, (see sections 13.4.1 and 13.4.3 for clarification);
  - 5.1.7 Intended application; and
  - 5.1.8 Edge contours required, (see 13.6).
- 5.2 The following options are available but may not be included unless specified at the time of placing of the order, when required:
  - 5.2.1 Electrical resistivity (Section 9);
- 5.2.2 Hydrogen embrittlement susceptibility test (Section 1):
- 5.2.3 Bend test (Section 11);
- 5.2.4 Certification (Specification B248 or Specification B250/B250M, or both);

  ASTM B272
- 5.2.5 Mill test reports (Specification B248 or Specification B250/B250M, or both);
- 5.2.6 If product is purchased for agencies of the U.S. Government (Section 12); and
  - 5.2.7 Heat identification or traceability details.

#### 6. Material and Manufacture

6.1 Material:

- 6.1.1 The material of manufacture shall be a copper billet, cake, wire bar or rod of such purity and soundness as to be suitable for processing into the products to the product specification listed in Section 1.
- 6.1.2 Copper other than that listed in 1.1.1 is permitted only upon agreement between the manufacturer and the purchaser (see Note 1).
- 6.1.3 When specified in the contract or purchase order, that heat identification or traceability is required, the purchaser shall specify the details desired.
  - 6.2 Manufacture:
- 6.2.1 The product shall be manufactured by such hot working, cold working, and annealing processes as to produce a uniform wrought structure in the finished product.
- 6.3 *Edges*—The edges shall be finished by rolling or drawing per 13.6.

# 7. Chemical Composition

- 7.1 The material shall conform to the chemical composition requirements in Table 1 for the copper UNS No. designation specified in the ordering information.
- 7.1.1 These composition limits do not preclude the presence of other elements. When required, limits shall be established and analysis required for unnamed elements by agreement between the manufacturer and the purchaser.

# 8. Temper

- 8.1 The standard tempers for products described in this specification are given in Table 2.
  - 8.1.1 Annealed temper O61.
- 8.1.2 Cold worked tempers H00, H01, H02, H03, H04, H06, and H08.

# 9. Physical Property Requirement

- 9.1 Electrical Resistivity Requirement:
- 9.1.1 When specified in contract or purchase order (see Section 5) Copper UNS No. C10100, C10200, C10300, C11000, C11040, C10500, and C10700 shall conform to the electrical mass resistivity requirements in Table 2, when tested in accordance with Test Method B193. When Electrical Resistivity testing is specified for other copper alloys the acceptance

<sup>&</sup>lt;sup>A</sup> Refer to Table 1, Chemical Requirements, Grade 1 of Specification B170 for impurity limits for Copper UNS No. C10100.

E Includes P.

<sup>&</sup>lt;sup>B</sup> Refer to Table 1, Chemical Requirements, Grade 2 of Specification B170 for impurity limits for Copper UNS No. C10200.

<sup>&</sup>lt;sup>C</sup> The following additional maximum limits shall apply: Se, 2 ppm (0.0002 %); Bi, 1.0 ppm (0.00010 %); Te, 2 ppm (0.0002 %); Group Total, Te + Se + Bi, 3 ppm (0.0003 %). Sn, 5 ppm (0.0005 %); Pb, 5 ppm (0.0005 %); Fe, 10 ppm (0.0010 %); Ni, 10 ppm (0.0010 %); S, 15 ppm (0.0015 %); Ag, 25 ppm (0.0025 %); Sb, 4 ppm (0.0004 %); As, 5 ppm (0.0005 %); Oxygen 100 to 650 ppm (0.010 to 0.065 %). The total maximum allowable of 65 ppm (0.065 %) does not include oxygen.

<sup>&</sup>lt;sup>D</sup> The copper value is determined by the difference between the impurity total and 100 %. The copper value is exclusive of Ag.

requirements shall be established by agreement between the manufacturer and the purchaser.

Note 2—The International Annealed Copper Standard electrical conductivity equivalents are as follows:

| Electrical Resistivity, $\Omega\text{-}g/m^2$ | Conductivity, % |
|---|-----------------|
| 0.151 76                                      | 101.00          |
| 0.153 28                                      | 100.00          |
| 0.156 14                                      | 98.16           |
| 0.157 75                                      | 97.16           |
| 0.159 40                                      | 96.16           |

# 10. Mechanical Property Requirements

- 10.1 Tensile Requirements:
- 10.1.1 Product 0.035 in. (0.90 mm) and under in thickness shall conform to the tensile strength and elongation requirements prescribed in Table 2, when tested in accordance with Test Methods E8/E8M.
- 10.1.1.1 Tensile strength test results shall be the basis for acceptance or rejection for mechanical properties for product 0.035 in. (0.90 mm) and under in thickness.
- 10.1.2 Product over 0.035 in. (0.90 mm) in thickness shall conform to the requirements prescribed in Table 2 when tested in accordance with Test Methods E8/E8M.

- -4ea9-6/9e-cia14/905/e4/asiii-02/2-12201
- 10.2 Rockwell Hardness:
- 10.2.1 Product over 0.035 in. (0.90 mm) in thickness shall conform to the hardness requirements prescribed in Table 2 when tested in accordance with Test Methods E18.
- 10.2.1.1 Rockwell hardness test results shall be the basis for acceptance or rejection for mechanical properties for product over 0.035 in. (0.90 mm) in thickness.

# 11. Performance Requirements

- 11.1 Hydrogen Embrittlement Susceptibility:
- 11.1.1 Samples of finished flat wire and strip of Copper UNS Nos. C10100, C10200, C10300, C10500, C10700, C10800, C12200, and C14200 shall be capable of passing the embrittlement test of Procedure B of Test Methods B577. The actual performance of this test is not mandatory under the terms of this specification unless definitely specified in the ordering information (see Section 5).
- 11.1.2 In case of dispute, Test Method C of Test Methods B577 shall be used.
  - 11.2 Bend Test Requirement:
- 11.2.1 When specified in contract or purchase order and tested in accordance with Test Methods E290, the specimen shall withstand being bent cold (room temperature) on a radius
