

Designation: **F3347–18 F3347 – 19**

Standard Specification for Metal Press Insert Fittings with Factory Assembled Stainless Steel Press Sleeve for SDR9 Cross-linked Polyethylene (PEX) Tubing¹

This standard is issued under the fixed designation F3347; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope-~~Scope~~*

1.1 This specification covers copper alloy metal press insert fittings with factory assembled stainless steel press sleeves incorporating 3 view holes and tool locator ring. These fittings are for use with cross-linked polyethylene (PEX) tubing in nominal sizes $\frac{5}{16}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2 that meet the requirements for Specification F876 or F3253. These fittings are intended for use in 100 psi (689.5 kPa) systems operating at temperatures up to, and including, 180 °F (82 °C). The requirements for materials, workmanship, dimensions, and markings to be used on the fittings and sleeves are also included. The components covered by this specification are intended for use in residential and commercial, hot and cold, potable water distribution systems as well as sealed central heating, including under-floor heating/cooling systems, and residential fire sprinkler systems.

1.2 *Units*—The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

Standard 372 Drinking Water System Components-Lead Content

2.6 EN Standard:⁷

EN 1982 Copper and Copper Alloys, Ingots and Castings

3. Terminology

3.1 Unless otherwise specified, definitions, abbreviations and initialisms are in accordance with Terminology **F412** and Terminology **D1600**.

3.2 Definitions:

3.2.1 *metal press insert fitting, n*—A type of fitting joint that attaches directly to the plastic tubing-piping component that is pushed into the open end of the plastic tubing and attaches by mechanically pressing and deforming an outer stainless steel sleeve over the plastic tubing which then compresses and displaces plastic onto the insert fitting's barbs creating a seal and a permanent connection outside diameter of the plastic tubing. The seal is realized between the outer diameter of the insert fitting and the inner diameter of the plastic tubing. Mechanical pressing is achieved by the use of a press tool.

3.2.2 *press sleeve, n*—Cylindrical shaped stainless steel ring which is compressed with a pressing tool while located over the PEX tubing securing it permanently to the underlying insert fitting.

3.2.3 *press tool, n*—A device by which the stainless sleeve is compressed by a forming die that is radially closed down on the press sleeve by either hand powered or electro-mechanical pressing action.

4. Classification

4.1 This specification covers one class of fittings and stainless steel press sleeve suitable for use with PEX tubing that meet either the requirements of Specification **F876** or **F3253**.

5. Materials and Manufacture

5.1 *Fittings*—The fittings shall be made from one of the following metals:

5.1.1 *Cast Copper Alloys*—Cast copper alloy fittings shall be made from material meeting the requirements of Specification **B584**, copper alloy UNS Nos. C87710 or C87850 or Standard EN 1982, copper alloy EN Symbol CuSn4Zn6Pb3–C.

5.1.2 *Machined Copper Alloy*—Machined Copper Alloy fittings shall be made from material meeting the requirements one of the following:

Specification	Alloy Designation
B16/B16M	UNS C36000
B124/B124M	UNS C65680, C87700
B371/B371M	UNS C69300

5.1.3 *Forged Copper Alloy*—Forged Copper Alloy fittings shall be made from material meeting the requirements of Specification **B283/B283M**, Copper Alloy UNS Nos. C37700, C65680, C69300 or C87700.

5.2 *Press Sleeves*—Press sleeves shall be made from Specification **A269/A269M** UNS S30400 or S31600 and have an allowable hardness of 130 ± 20 HV5 according to Test Method **E92**.

5.3 *Potable Water Requirements*—Products intended for the transport of potable water shall be evaluated, tested and certified for conformance with NSF/ANSI Standard 61 or the health effects portion of NSF/ANSI Standard 14 by an acceptable certifying organization when required by the regulatory authority having jurisdiction.

5.3.1 NSF/ANSI Standard 372, limiting lead content of a water contacting component to ≤ 0.25 %, is a mandatory requirement within the current version of NSF/ANSI Standard 61.

NOTE 1—Not all alloys listed in 5.1 are NSF/ANSI 61 or NSF 372 compliant.

^A Rib outside diameter shall be measured individually.

^B ID "B" shall be maintained through the insert length "L".

^C Directional fittings shall be designed with sufficient overall dimensions to allow for proper alignment of press tool without interfering with the adjacent press sleeve assembly.

^D Lead chamfer area is not considered a rib.

5.3.2 *Corrosion Resistance*—Fittings intended for potable water applications shall comply with dezincification resistance and stress corrosion cracking resistance requirements of NSF/ANSI Standard 14.

6. Requirements

6.1 *General*—All performance tests shall be performed on assemblies of fittings, press sleeves, and PEX tubing. Fittings and press sleeves shall meet the material and dimensional requirements of this specification. PEX tubing shall meet the requirements of Specification F876 or F3253. Use separate sets of assemblies for each performance test requirement.
