**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

**IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)**

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**TRANSMITTING EQUIPMENT FOR RADIOCOMMUNICATION –  
RADIO-OVER-FIBRE TECHNOLOGIES FOR ELECTROMAGNETIC-FIELD  
MEASUREMENT –**

**Part 2: Radio-over-fibre technologies for electric-field sensing**

**FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 63099-2, which is a Technical Report, has been prepared by IEC technical committee 103: Transmitting equipment for radiocommunication.

The text of this Technical Report is based on the following documents:

|             |                  |
|-------------|------------------|
| Draft TR    | Report on voting |
| 103/184/DTR | 103/186A/RVDTR   |

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 63099 series, published under the general title *Transmitting equipment for radiocommunication – Radio-over-fibre technologies for electromagnetic-field measurement*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC TR 63099-2:2020](#)

<https://standards.iteh.ai/catalog/standards/sist/1134bfb5-fd3a-4844-86a9-0f29024ea7e9/iec-tr-63099-2-2020>

## INTRODUCTION

This document provides information on the current and latest applications for electric-field sensing using radio-over-fibre technology. Electric-field measurement systems are covered, which are practically in use or will be used soon. It will be beneficial to system developers and system users in the fields of electric-field measurement. As a Technical Report, this document contains no requirements and is informative only.

# TRANSMITTING EQUIPMENT FOR RADIOCOMMUNICATION – RADIO-OVER-FIBRE TECHNOLOGIES FOR ELECTROMAGNETIC-FIELD MEASUREMENT –

## Part 2: Radio-over-fibre technologies for electric-field sensing

### 1 Scope

The purpose of this part of IEC 63099 is to provide information about the current and latest applications for electric-field measurement that use radio-over-fibre technologies. System configurations, specifications, and measurement examples of each electric-field measurement system are included. The theoretical background of electric-field measurement and calibration method of electric-field sensors are beyond the scope of this document.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEEE Std. 145-2013, *IEEE Standard for Definitions of Terms for Antennas*

### 3 Terms, definitions and abbreviated terms

#### 3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in IEEE Std. 145-2013 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

##### 3.1.1

#### **O/E converter**

#### **optical to electrical converter**

converter which directly converts optical signals into electrical signal

Note 1 to entry: A photo-diode is generally used as an O/E converter device

##### 3.1.2

#### **isotropy**

uniform sensitivity for all spherical direction

Note 1 to entry: Sometimes it is misunderstood as equivalence of each axis sensor of 3-axis.

##### 3.1.3

#### **TEM-Cell**

transverse electromagnetic field cell waveguide which can generate a certain level of uniform electric-fields in the cell

### 3.2 Abbreviated terms

|       |  |
|-------|--|
| DUT   | device under test                      |
| EO    | electro-optic                          |
| LD    | laser diode                            |
| LN    | lithium niobate                        |
| LNA   | low noise amplifier                    |
| O/E   | optical to electrical                  |
| OMI   | optical modulation index               |
| PD    | photodiode                             |
| PMF   | polarization maintaining fibre         |
| P1dB  | 1 dB power compression point           |
| SMF   | single-mode fibre                      |
| TEM   | transverse electromagnetic-field       |
| TIA   | transimpedance amplifier               |
| VCSEL | vertical cavity surface emitting laser |

## 4 Practical examples of electric-field sensing system using RoF technologies

### 4.1 Overview

A lot of electric-field sensing systems using RoF technology are proposed. This document introduces the system configuration, specifications, examples of measurement results of typical electric-field sensing systems which are already commercialized.

### 4.2 Features of electric-field sensing system using RoF technologies

Electric-field sensing systems using RoF technologies have many features as follows:

- minimal-invasiveness to electric-field;
- electrical smallness;
- good isotropy;
- high linearity.

### 4.3 List of implementation examples

The following list shows the examples of implementation of electric-field measurement systems using RoF technology:

- a) 3-axis electric-field sensor using LN optical modulators, described in 4.4;
- b) bulk-type electric-field sensor using ZnTe optical modulators, described in 4.5;
- c) electric-field probes using VCSEL, described in 4.6.

### 4.4 3-axis electric-field sensor using LN optical modulators

#### 4.4.1 System configuration

Figure 1 shows the system configuration of the 3-axis electric-field sensor using an LN optical modulator. The sensor consists of a sensor head, controller, single-mode optical fibres for signal transfer, and a spectrum analyser for signal analysis. Figure 2 shows the structure of the sensor head. It uses an LN optical modulator, in which antenna elements are formed on the crystal substrate. These three LN optical modulators are arranged onto the three sides of a

triangle prism, obtaining isotropy [1]<sup>1</sup>. In other words, the three LN optical modulators are arranged so that they are at right angles to each other, and their maximum radiation angle from the optical waveguide is 54,7°, thus achieving isotropy. The controller consists of an optical source, optical circulator, optical switch, O/E converter, and control circuit. Un-modulated light emitted from the optical source passes through the optical circulator and optical switch, and is guided to the sensor head. The LN optical modulator on each axis is selected by the optical switch, and the light, which has been intensity-modulated via a spatial electric-field, returns to the optical circulator, and is guided to the O/E converter. It is possible to measure the output on each axis after O/E conversion with a spectrum analyser and measure the electric-field strength  $E$  by applying the following formula.

$$E = \sqrt{E_x^2 + E_y^2 + E_z^2} \tag{1}$$

where  $E_x$  is the electric-field strength on the X axis;  $E_y$  is the electric-field strength on the Y axis; and  $E_z$  is the the electric-field strength on the Z axis.

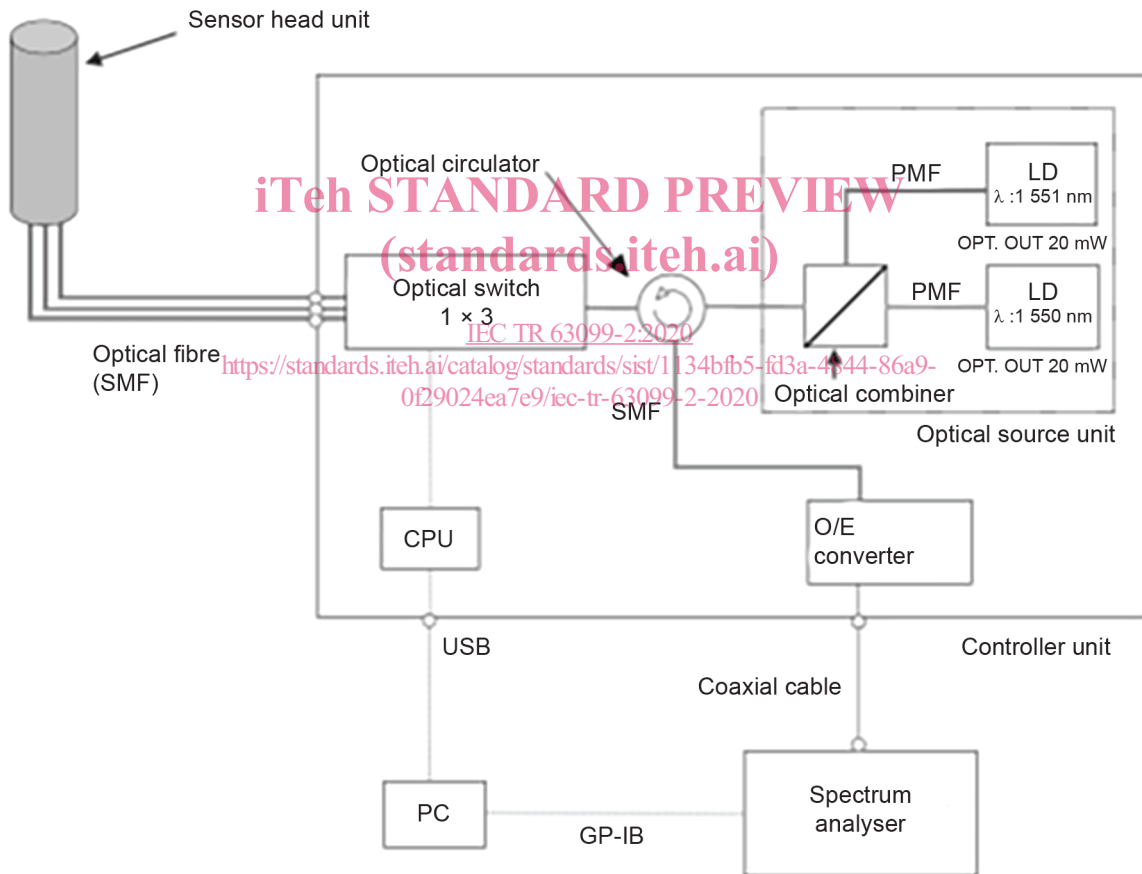

Figure 1 – System diagram of the optical E-field sensor

<sup>1</sup> Numbers in square brackets refer to the bibliography.

IEC

Figure 2 – Structure of the sensor head unit

#### 4.4.2 Specifications

Table 1 shows the specifications of a 3-axis electric-field sensing system using the LN optical modulator models SH-03EX and SH-10EX of Seiko Giken Co. Ltd<sup>2</sup>. Figure 3 shows the appearance of the 3-axis electric-field sensing system.

Table 1 – Specification of 3-axis electric-field sensing system using LN optical modulator

| Item                         |         | Specification  |       |         |      | Remarks   |
|------------------------------|---------|----------------|-------|---------|------|---|
|                              |         | Minimum        | Type  | Maximum | Unit |   |
