This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

Designation:  $D123 - 17^{\varepsilon 1}D123 - 19$ 

# Standard Terminology Relating to Textiles<sup>1</sup>

This standard is issued under the fixed designation D123; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

<sup>1</sup> NOTE—This terminology was updated editorially in August 2018.

### 1. Scope

1.1 This standard is the compilation of all terminology developed by Committee D13 on Textiles.

1.1.1 This terminology, consists mostly of definitions, which are specific to the textile industry. Meanings of the same terms used outside the textile industry can be found in other compilations or in dictionaries of general usage.

1.1.2 The specific D13 subcommittee (SC) which has jurisdictional responsibility for every item is the first attribution noted after the definition. The SC terminology standard in which all the terms and definitions appear is listed by number after the jurisdiction for the term. The wording of an entry cannot be changed without the approval of the subcommittee which has jurisdiction. Users of this compilation should also review the SC terminology standard listed for more details or interpretations of these terms and their use by the SC having jurisdiction.

1.2 In addition to being a specialized dictionary, Terminology D123 is also a tool for managing the committee's terminology. This includes finding, eliminating, and preventing redundancies, that is, where two or more terms relating the same concept are defined in different words. Redundancies can also occur when one definition is used for two or more terms.

1.3 While the review for clarity and form are the responsibility of the terminology subcommittee, the concept of managing terminology is the broad responsibility of every writer of standards, specifically the task group leader and subcommittee chairman.

1.4 Subsequent to a listing of specific subcommittee compilations, this standard is comprised of the following sections that are listed in the order in which they appear.

- 1.4.1 Alphabetical listing of terms with definitions followed by SC attribution in brackets and SC terminology standard.
- 1.4.2 Annex A1 Terms Relating to the Hand of Fabrics.

1.4.3 Annex A2 Industry Accepted Synonyms. ASTM D123-19

- 1.4.4 Annex A3 Terminology Taken From D13 Standards That Have Been Withdrawn.
- 1.4.5 Annex A4 Terminology Relating to Leather.

1.4.6 Annex A5 Terminology Revision Procedures.

1.4.7 Appendix X1 Other Sources of Textile Terminology.

1.5 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

#### 3. Terminology

3.1 Alphabetical listing of terms with subcommittee jurisdiction and attribution for each term.

A-tuft, *n*—a single-pass process for aligning hook free fibers on the Fibroliner FL-101. [D 13.11] D7139

abrasion, *n*—the wearing away of any part of a material by rubbing against another surface. [D13.59] D4850

abrasion, *n*—for inflatable restraint fabrics, a fuzzy cluster of broken filaments damaged by scraping. [D13.20] D6799

abrasion cycle, *n*—one complete movement across the surface of a material. [D13.59] D4850

abrasion cycle, *n*—for the Martindale Abrasion Tester, 16 rubs required to complete a geometric shape, known as a Lissajous. [D13.59] D4850

abrasion cycle, *n—in abrasion testing*, one or more movements of the abradant across a material surface, or the material surface across the abradant, that permits a return to its starting position. [D13.59] D4850

abrasion mark, *n*—an area damaged by friction. <u>ASTM D123-19</u> [D13.59] D3990

absolute humidity, *n*—the mass of water vapor present in a unit volume of air. (See humidity and relative humidity) [D13.51] D4920

absorbent compound, *n*—*in textile cleaning*, sponge-like particles which, when saturated with water or dry solvent and detergent and brushed into the textile, remove soil from the textile. See powder cleaner. [D13.62] D5253

absorbent pad, *n*—for cleaning textile floor coverings, a damp textile material (fabric, felt, sponge, or mop) used to agitate and wipe the pile and, in the process, absorb soil.
 [D13.62] D5253

absorption, n—a process in which one material (the absorbent) takes in or absorbs another (the absorbate); as the absorption of moisture by fibers. (See also adsorption, and moisture equilibrium for testing. Compare desorption and resorption.)
 [D13.51] D4920

accelerated aging, *n*—*in textile processing and testing*, the use of controlled environmental conditions to promote rapid physical or chemical change in a textile material. [D13.20] D6799

accuracy, *n—of a test method*, the degree of agreement between the true value of the property being tested (or accepted standard value) and the average of many observations made according to the test method, preferably by many observers. [D13.59] D4850

acid content, *n*—of *felt*, the number of milliequivalents of acid present per unit weight of felt, measured under prescribed conditions. [D13.13] D4845

acromion, *n*—*in anatomy*, that part of the shoulder blade located at the end of the spine which articulates with the collar bone. (See also shoulder joint.) [D13.55] D5219

across back shoulder width, *n*—the horizontal distance across the back from the top of one shoulder joint to the top of the other shoulder joint, taken with the arms down.
[D13.55] D5219

across front shoulder width, *n*—the horizontal distance across the front from the top of one shoulder joint to the top of the other shoulder joint, taken with the arms down.
[D13.55] D5219

across shoulder, n-in body measurements, the distance from shoulder joint to shoulder joint across the back. [D13.55] D5219

acrylic fiber—See acrylic in D7641.

adhesion, *n*—the property denoting the ability of a material to resist delamination or separation into two or more layers. [D13.19] D6477

adhesion, *n—in tire fabrics*, the force required to separate a textile material from rubber or other elastomer by a definite prescribed method. [D13.19] D6477

adhesive treated-tire cord, *n*—a tire cord whose adhesion to rubber or other elastomer has been improved by the application of a dip followed by rapid drying and (normally) additional heat treatment. [D13.19] D6477

adsorption, n—a process in which the surface of a solid takes on or absorbs in an extremely thin layer molecules of gases, of dissolved substances, or of liquids with which it is in contact. (See also absorption, moisture equilibrium of testing. Compare desorption and resorption.)

afterflame, *n*—persistent flaming of a material after the ignition source has been removed. [D13.92] D4391

after-flame time, n—the length of time for which a material continues to flame after the ignition source has been removed. [D13.92] D4391

afterglow, *n*—glow in a material after the removal of an external ignition source or after the cessation (natural or induced) of flaming of the material. (See also flame, glow, and smoldering.) [D13.92] D4391

afterglow time, *n*—the time afterglow continues after the cessation of flaming or after removal of the ignition source. [D13.92] D4391

air-jet spinning machine, *n*—a machine that converts slivers of staple fibers into spun yarn using drafting rollers and a vortex created by an airflow suction orifice. [D13.58] D3888

air permeability, *n*—the rate of air flow passing perpendicular through a known area under a prescribed air pressure differential between the two surfaces of a material. [D13.59] D4850

air splice, *n—for inflatable restraint fabrics*, the thicker portion of a yarn resulting from the entanglement of the filaments at the ends of two multifilament yarns to create a continuous yarn. [D13.20] D6799

**air-supported roof**, *n*—a fabric roof-system that is properly secured and primarily supported and held in place by air pressure. **[D13.59] D4850** 

air wicking, *n*—*in tires*, the passage of air longitudinally along or through yarns in a fabric that has been encased and cured in rubber or other elastomer, that is, air permeability in the plane of the fabric. [D13.19] D6477

alkali solubility, *n*—*in wool*, the percent of clean wool that is soluble in a specified alkaline solution under controlled conditions of temperature and time. [D13.13] D4845

All-purpose, *n*—an outerwear garment, often with a removable liner, which is suitable for use in many different weather conditions. [D13.61] D7022

alpaca, *n*—the fleece and fiber produced by the alpaca, an animal of the genus Llama (*Lama glama pacus*). [D13.13] D4845

alternate grade reference line, n—an optional internal line whose orientation is used for the "x" axis of a grade rule. [D13.66] D6963

American grain count, *n*— direct yarn numbering system for expressing linear density, equal to the mass in grains per 120 yards of sliver or roving. [D13.58] D4849

amount, *n—in cotton fiber testing with the Length Analyzer*, a measure of the thickness or pneumatic density of the test beard, proportional to the number of fibers present at various distances from the base of the specimen clamp jaws. [D13.11] D7139

**amount**, *n*—*in cotton length testing with the Fibrograph*, a measure of the thickness, or optical density, of the test beard, proportional to the number of fibers present at various distances from the comb(s). [D13.11] D7139

anidex fiber—See anidex in D7641.

animal fiber, *n*—any natural protein-base fiber. See D7641.

ankle, *n*—*in anatomy*, the joint between the foot and the lower leg.

[D13.55] D5219

average fiber diameter, *n*—the arithmetic mean width of a group of fibers.

[D13.13] D4845

ankle girth, *n*—*in body measurements*, the circumference of the leg over the greatest prominence of the ankle. [D13.55] D5219

ankle height, *n*—*in body measurements*, with the subject standing barefoot, the distance from the center of the prominent outside ankle bone to the floor. [D13.55] D5219

🖽 D123 – 19

ankle height (infant special case), *n*—the straight distance from the prominence of the outer ankle bone to the soles of the feet, taken with subject lying down flat with legs extended and the foot positioned at 1.57 rad  $(90^{\circ})$  to the leg. [D13.55] D5219

annotation text, *n*—optional user text that can be specifically defined and displayed when the pattern piece is plotted. [D13.66] D6963

**apex**, *n*—the greatest protrusion of the breast as seen from the side.

apex angle, *n*—the angle formed between the incoming and outgoing yarn at the top (and bottom) of the inter-wrapped yarn area [D13.19] D6477 in the static condition.

applied tension, *n*—*in yarn abrasion testing*, the static tension exerted on the weighted end of the yarn by the applied weight. [D13.19] D6477

aqueous extract, *n*—*in wool testing*, the solution obtained by digesting a material with water or with a sodium chloride solution to dissolve soluble materials. [D13.13] D4845

aramid fiber—See aramid in D7641.

architectural-use, n-in the building trade, a descriptive term for fabrics used in fabric roof-systems or similar industrial applications. (See also fabric roof-system.)

[D13.59] D4850

[D13.53]

D5219

arm length, *n*—*in body measurements*, with the arm bent at 90 degrees and the clenched fist placed on the hip, the distance from the shoulder joint along the outside of the arm over the elbow to the greatest prominence on the outside of the wrist.

[D13.55] D5219 (Compare **armscye**.)

**armpit**, *n*—*in anatomy*, the hollow under the junction of the arm and the shoulder. [D13.55] D5219

armscye, *n*—in garment construction, the opening in a garment for the attachment of a fitted sleeve. (Compare armhole.) [D13.55] D5219

**armscye circumference**, *n*—*in body measurements*, with the arm hanging down, the distance from the shoulder joint through the front-break point, the armpit, the back-break point and to the starting point. [D13.55] D5219

assembled button, n—a decorative button consisting of combinations of similar or dissimilar materials, such as plastic and metal or metal and metal, which have been joined together by such processes as gluing, swedging or metal stamping. [D13.54]

atmosphere for testing, *n*—air at ambient conditions of relative humidity and temperature in which tests or experiments are conducted. (See also standard atmosphere for testing.) [D13.51] D4920

at a temperature of at least 20°C (68°F) and no greater than 25°C (77°F). [D13.18] D7018

provide additional dimensional stability, thickness, and padding. [D13.21] D5684

attached upholstery fabric, n—the exterior fabric covering secured to a furniture unit by the furniture manufacturer or custom upholsterer. (See furniture coverings) [D13.63] D7023

automatic lock slider, n-a slider that provides involuntary, positive locking action on the chain when the pull is released restricting the movement of the slider to open the chain unless a stress is applied through the stringers that exceeds the locking capacity of the slider. [D13.54] D2050

average dynamic air permeability (ADAP), n-for inflatable restraints, the average of all of DAP measurements within a specified range of pressure differentials. [D13.20] D6799

[D13.55] D5219

armhole, *n*—*in garment construction*, the area of a garment through which the arm passes or into which a sleeve is fitted.

D2050

atmosphere for testing textiles, *n*—for glass, air maintained at a relative humidity of at least 48 % and no greater than 67 % and

attached cushion, *n*-for pile yarn floor covering, a material, bonded to the backing fabric side of a pile yarn floor covering to

average fiber diameter, *n*—*in wool and other animal fibers*, the average width of a group of fibers when measured on a projected [D13.13] D4845 image.

slider fastener.

<i>azlon fiber</i> —See <b>azlon</b> D7641. <b>B-tuft,</b> <i>n</i> —a two-pass process for aligning hooked fibers on the Fibroliner FL-101. [D13.11] D72	139
<b>back breakpoint</b> , <i>n</i> — <i>in anatomy</i> , the location on the back of the body where the arm separates from the body. [D13.55] D52	219
<b>back coating</b> , <i>n</i> — <i>in textile floor covering</i> , an adhesive compound applied for such purpose as locking pile yarn tufts into a car backing, bonding a secondary backing to a primary backing, or increasing fabric body or stiffness and increasing dimension stability [D13.63] D7(	onal
back side, <i>n</i> — <i>in textile materials</i> , the side of the material that faces inward in the completed object. (Ant. face side, <i>right side</i> . S <i>wrongside</i> .) [D13.54] D56	
back waist length, <i>n—in body measurements</i> , the vertical distance along the spine from the cervicale to the wa [D13.55] D52	
back width, <i>n</i> — <i>in body measurements</i> , the distance from back-breakpoint to back-breakpoint. [D13.55] D52	219
backing, <i>n</i> —for pile yarn floor covering, all materials in a pile yarn floor covering other than pile yarn. [D13.21] D50	684
<b>backing fabric</b> , <i>n</i> — <i>in textiles</i> , a fabric into which a pile yarn is inserted, or a reinforcing layer which is adhered to the reverside of a fabric. [D13.21] D56	
bagging, <i>n</i> —any material, such as fabric or other suitable material used to protect commodities during shipment and/or stora [D13.59] D48	-
bail, <i>n</i> —a portion or portions of the slider to which the pull or pulls are attached. (Syn. lug) [D13.54] D20	050
bale (jute), n—a bag, sack, etc., containing packages of yarn.[D13.17]D67	798
barb, <i>n</i> — <i>in down</i> , the primary structure of plumage emanating from a quill point of a down cluster. [D13.61] D70	022
barb, <i>n</i> — <i>in feathers</i> , the primary structure of plumage emanating from the quill of a feather. [D13.61] D70	022
<b>barré</b> , <i>n</i> —an unintentional, repetitive visual pattern of continuous bars and stripes usually parallel to the filling of woven fab or to the courses of circular knit fabric. (Compare <b>warp streaks</b> and <b>mixed filling</b> , see <b>filling blend</b> .) [D13.59] D39	
base burn, <i>n</i> —the point at which the flame burns the ground (base) fabric of a raised surface textile fabric and provide self-sustaining flame. [D13.92] D43	
base size, <i>n</i> —the digitized or created size of a style. [D13.66] D69	963
<ul> <li>bast fibers, n—in flax stems, fibers found in the layer of phloem of the flax stem between the inner xylem tissue and the epidern tissue.</li> <li>[D13.17] D67</li> </ul>	
bast and leaf fiber, <i>n</i> —fiber derived from the inner fibrous bark and the hard coarse leaves of dicotyledonous plants such as fi hemp, jute, and abaca. [D13.17] D67	
<b>batch sample,</b> <i>n</i> —the material(s) used for the proficiency test study taken from a common roll or garment lot and distributed the participants. [D13.59] D48	
bath mat, n—an absorbent textile floor covering normally used in the bathroom as a pad on which to step when getting out of tub or shower.         [D13.62]       D52	
bath rug, <i>n</i> —a scatter rug used in the bathroom. [D13.62] D52	253
bath sheet, <i>n</i> —a textile terry product with end hems or fringes and side hems or selvages that is generally much larger than a b towel. [D13.63] D7(	
bath towel, n—a textile terry product with end hems or fringes and side hems or selvages, which is used to dry a person's be after bathing or swimming.         [D13.63]       D70	
<b>batting</b> , <i>n</i> —a textile filling material consisting of a continuous web of fibers formed by carding, garnetting, air laying, or ot means. [D13.61] D7(	
<b>batting integrity,</b> <i>n</i> —the ability of a textile filling material to resist distortion or change when subjected to multiple ho launderings or drycleanings. [D13.61] D7(	
<b>bead,</b> <i>n</i> — <i>in an individual element slide fastener</i> , an enlarged section on the inner edge of each tape formed by the cord and we yarns of the tape used to attach the cord to the tape. the interlockable elements are affixed to the bead on an individual element slider fastener.	nent

[D13.54] D2050

↓ ↓ D123 – 19		
<b>bead</b> , <i>n</i> — <i>in a continuous element woven typeslide fastener</i> , a section of the tape where a cord and/or selected was in place by the weft yarns of the tape to form a bead. The continuous element is secured to the tape by the b with the bead formation.		neously
<b>bead</b> , <i>n</i> — <i>in a continuous element sewn type slide fastener</i> , a section of the tape where a cord is attached to A cord is optional on a continuous element sewn type slide fastener.	the tape by <b>[D13.54]</b>	U
<b>beam,</b> <i>n</i> — <i>in textiles</i> , a large spool containing many ends of yarn wound parallel, and used for such purposes knitting.	as weaving [ <b>D13.58</b> ]	
beam set, <i>n</i> — <i>in textiles</i> , one or more beams of yarn in a single shipment to be further processed together for	a specific e [D13.58]	
bedcovering, <i>n</i> —a textile product used on a bed over the sheets for warmth or decoration.	[D13.63]	D7023
bedspread, n-a type of bedcovering that is placed over the blankets and sheets for appearance and warmth	. [D13.63]	D7023
<b>bench marks</b> , <i>n</i> —marks placed on a specimen to define gage length, that is, the portion of the specimen that in a specific test.	at will be ev [ <b>D13.58</b> ]	
<b>bending length,</b> $n$ —(1) general—a measure of the interaction between fabric weight and fabric stiffness as should be which a fabric bends under its own weight. It reflects the stiffness of a fabric when bent in one plane under and is one component of drape. (2) specific—the cube root of the ratio of the flexural rigidity to the weight.	the force of	gravity, nit area.
bias, <i>n</i> — <i>in statistics</i> , a constant or systematic error in test results.	[D13.59]	D4850
<b>bicomponent fiber,</b> <i>n</i> —a fiber consisting of two polymers which are chemically different, physically	different, c [ <b>D13.51</b> ]	
binding site, <i>n</i> -for pile yarn floor covering, a place at which the pile yarn is, or can be, bound to p	the backing [D13.21]	
birdseye, <i>n</i> —in knitted fabrics, an unintentional tuck stitch.	[D13.59]	D3990
<b>birefringence</b> , <i>n</i> —( <i>double refraction</i> ) a property of anisotropic materials which manifests itself as a splitting components having different vibration directions which are transmitted at different velocities.	g of a light : [ <b>D13.51</b> ]	ray into <b>D4920</b>
black felt, <i>n</i> —those classifications of felt manufactured to various shades of the color black.	[D13.13]	D4845
blanket, <i>n</i> —for bedding, an unquilted fabric covering designed primarily to provide thermal insulation.	[D13.63]	D7023
<b>bleach</b> , <i>n</i> — <i>in care of textiles</i> , a product for brightening and aiding in the removal of soils and stains from oxidation that is inclusive of both chlorine and non-chlorine products.	textile mate [D13.62]	•
<b>bleedthrough</b> , <i>n</i> — <i>for coated inflatable restraint fabrics</i> , the presence of coating material on the uncoated sie, without covering either yarn.	between two [D13.20]	
blending plan, <i>n</i> —the instructions for mixing fibers during specimen preparation.	[D13.11]	D7139
<b>blind hem stitch</b> , <i>n</i> — <i>in home sewing</i> , a complex machine stitch pattern consisting of small groups of straight stitches separated by a wide zigzag stitch unit at consistent intervals.	ht or narrow [ <b>D13.54</b> ]	
<b>blip</b> , <i>n</i> — <i>for inflatable restraint fabrics</i> , and short, irregularly shaped or textured portion of an individual mult has been woven into the fabric, including slough offs, stripbacks, fuzz balls, snarls, and slubs.	ltifilament y [ <b>D13.20</b> ]	
<b>blister,</b> <i>n</i> — <i>in bonded, fused, or laminated fabrics</i> , a bulge, swelling, or similar surface condition on either the backing fabric characterized by the fabric being raised from the plane of the underlying component over a a puffy appearance. [D13.59, D13.69]	limited area	to give
<b>block</b> , <i>n</i> —for cutting standard def., a a sequence of commands within a cut file and which activate a response fabric cutter.	se by the aut [D13.66]	
<b>blocking</b> , <i>n</i> —of coated fiber glass yarn solar screening, an undesired adhesion between touching layers of occurs under moderate pressure, during storage or use.	a material, [D13.18]	
blocking, n-the measurement of the development of surface tack and the thermal softening point	t of the n	naterial.

[D13.63] D7023 [D13.59] D3990

blotch, *n*—an irregularly shaped offcolored area.

6

🖽 D123 – 19

**bobbin**, *n*—a slightly tapered plastic cylinder, mounted on a spindle of a ring spinning frame on which yarn produced from drafting and twisting is wound. [D13.58] D3888

body dimension, *n*—in garment construction, a body measurement which can be used to build a sizing system or to select an appropriately sized garment. (See also sizing system.) [D13.55] D5219

**body measurements,** *n*—*in anthropometry*, a standardized distance between two specified points on the human anatomy. [D13.55] D5219

bond strength, n-of bonded, fused, or laminated fabrics, the tensile force expressed in ounces per 25 mm (1 in.) of width,

**bonded fabric**, *n*—a layered fabric structure wherein a face or shell fabric is joined to a backing fabric, such as tricot, with an adhesive that does not significantly add to the thickness of the combined fabrics. (See also laminated fabric and coated fabric.) [D13.59, D13.61] D4850, D7022

bonnet, *n*—in cleaning pile floor coverings, an absorbent pad which can be mounted under a rotary shampoo machine. [D13.62] D5253

**book fold**, *n*—a fabric doubled selvage to selvage, then folded back and forth upon itself in predetermined lengths. (See also **shoe** fold.) [D13.59] D4850

bottom assembly, n—the components of the lowermost part of a slide fastener that determines whether the slide fastener will be non-separable or separable. (See also non-separable slide fastener and separable slide fastener.) [D13.54] D2050

**bottom stop**, *n*—a part affixed to both stringers immediately below, or over, the chain, holding the two stringers together at the bottom and preventing the slider from leaving the chain. [D13.54] D2050

**bound seam-finish**, *n*—*in home sewing*, a seam finish in which another material is used to enclose the cut edges of one or more seam allowances. (Compare Hong Kong seam-finish.) [D13.54] D5646

bound water, n—the amount of water in a test specimen that is hydrogen bonded to cellulose and expressed as a percentage of the mass of the specimen. [D13.11] D7139

boundary friction, *n*-friction at low sliding speeds (0.02 m/min or less) where lubrication occurs under thin-film lubricant conditions. [D13.58] D4850

bow, n—a fabric condition resulting when filling yarns or knitted courses are displaced from a line perpendicular to the selvages and form one or more arcs across the width of the fabric. (See also double bow.) 7-b8ea4432dc53ast [D13.59] D3990

**braid**, *n*—a narrow tubular or flat fabric produced by intertwining a single set of yarns according to a definite pattern (Maypole process). [D13.18] D7018

**braided fabric**, *n*—a structure produced by interlacing three or more ends of yarns in a manner such that the paths of the yarns are diagonal to the vertical axis of the fabric. [D13.59] D4850

braided rope, *n*—a cylindrically produced rope made by intertwining, maypole fashion, several to many strands according to a definite pattern with adjacent strands normally containing yarns of the opposite twist. [D13.92] D123

break factor, n-in yarn testing, the comparative breaking load of a skein of yarn adjusted for the linear density of the yarn expressed in an indirect system. [D13.58] D4848

breaking, *n*—the crushing of the structure of the stem; loosening the bond between the fiber bundles and shives and breaking the [D13.17] D6798 shives into short pieces to facilitate its removal.

breaking force, *n*—the maximum force applied to a material carried to rupture. (Compare breaking point. See breaking strength.) [D13.58] **D4848** 

breaking load, *n*—depricated term. Use breaking force.

**body weight**, *n*—*in body measurements*, mass in kilograms (pounds).

required to separate the component layers under specified conditions.

breaking point, n-on a force-extension or force-elongation curve, or stress-strain curve, the point corresponding with the breaking force or the breaking stress in a tensile test. (Compare breaking force.) [D13.58] D4848

breaking strength, *n*—the ability or capacity of a specific material to withstand the ultimate tensile load or force required for rupture. (See also **tensile strength**) [D13.58] D4848

**breaking strength**, *n*—a strength expressed in terms of breaking force.

[D13.59] D4850

[D13.59, D13.61] D4850, D7022

[D13.55] D5219

## 🕼 D123 – 19

<b>breaking tenacity</b> , <i>n</i> —the tenacity at the breaking force.	[D13.58]	D4848
breaking tenacity, <i>n</i> —the tenacity corresponding to the breaking load.	[D13.13]	D4845
breaking toughness, <i>n</i> —the actual work per unit volume or per unit mass of material that is required to	rupture the r [ <b>D13.58</b> ]	
breakout pressure, <i>n</i> -for inflatable restraints, the pressure level during deployment which rupture	the module [D13.20]	
<b>bridge</b> , <i>n</i> —the area of a button between the holes partially covered by the sewing threads with dimensions and end use.	varying upor [D13.54]	-
<b>bridge top stop</b> , <i>n</i> — <i>in zippers</i> , a part affixed immediately above the chain, holding the tops of the two s preventing the slider from leaving the chain.	stringers toge [D13.54]	ther and <b>D2050</b>
broken end, <i>n</i> —in woven fabrics, a void in the warp direction due to yarn breakage.	[D13.59]	D3990
broken filament, n-in multifilament yarn, breaks in one or more filaments.	[D13.58]	D4849
broken pick, <i>n</i> —in woven fabrics, a discontinuity in the filling direction caused by a break or cut	t in the fillir [ <b>D13.59</b> ]	
<b>bruise</b> , <i>n</i> — <i>in fabrics</i> , an area that has been subjected to impact or pressure, which differs from the adjacent no	ormal fabric. [	D13.59] D3990
<b>brush</b> , <i>n</i> —a hand-held cleaning tool consisting of a base into which bristles are inserted.	[D13.62]	D5253
<b>brush</b> , <i>vt—in refurbishing textiles</i> ,(1) to use a brush to remove surface particulate soils, (2) work a clear cleaning agent into carpet pile or upholstery fabric, or (3) restore the appearance of pile fabrics.	ning solution [D13.62]	or spot <b>D5253</b>
bubble, <i>n</i> —see preferred term blister.	[D13.59]	D4850
bulk density, <i>n</i> -apparent mass per unit volume. / standards.iteh.ai)	[D13.51]	D4920
<b>bulk sample</b> , <i>n</i> — <i>in the sampling of bulk material</i> , one or more portions which (1) are taken from material of separately identifiable units and (2) can be identified after sampling separate or composited units.	that does not [D13.58]	
<b>bulk shrinkage,</b> <i>n</i> —a measure of potential stretch and power of stretch yarns or a measure of bulk of ASTM D123-19	of textured-se [D13.58]	•
<b>bunch</b> , $n$ —a defect in a yarn characterized by a segment not over 6 mm ( $\frac{1}{4}$ in.) in length that shows an abrup caused by more fibers matted in this particular place. (See <b>slug</b> , <b>slub</b> .)	ot increase in o [D13.58]	
<b>buried pile yarn</b> , <i>n</i> —for coated pile yarn floor covering, that portion of the pile tuft elements which remains have been removed by shearing.	ains after the [D13.21]	-
burlap, n-a coarse, heavy, plain weave fabric of yarns, such as bast or cotton fiber yarn.	[D13.59]	D4850
<b>burn time</b> , <i>n</i> —the time elapsed from ignition until the stop thread is severed as measured by the timing r apparatus.	nechanism of [ <b>D13.92</b>	
burning behavior, <i>n</i> —all the changes that take place when materials or products are exposed to a spec	tified ignition [D13.92]	
<b>burr-wool waste</b> , <i>n</i> —waste removed by the burr guard of cards or burr pickers having a very short fiber and	full of burrs of <b>[D13.13]</b>	
<b>bursting strength,</b> <i>n</i> —the force or pressure required to rupture a textile by distending it with a force, app the plane of the fabric, under specified conditions.	lied at right a [ <b>D13.59</b> ]	-
<b>bursting strength,</b> <i>n</i> —the force or pressure required to rupture a fabric by distending it with a force, applied plane of the fabric, under specified conditions.	l at right angl [ <b>D13.59</b> ]	
<b>bust girth</b> , <i>n</i> — <i>in body measurements</i> , the circumference of the body over the fullest part of the breasts and (Compare <b>chest girth</b> .)	d parallel to t [ <b>D13.55</b> ]	
<b>bust point to bust point,</b> <i>n</i> — <i>in body measurements</i> , the distance across the front from the apex of one bre other.	east to the ape [D13.55]	

- bust point to bust point (halter), *n*—the horizontal distance from bust apex around the back of the neck to bust apex, taken with the arms down. [D13.55] D5219
- button, *n*—a knob, disc, or similar object which when forced through a narrow opening or buttonhole, fastens one part of a garment or other flexible substrate to another.[D13.54] D2050
- buttonhole stitch, *n—in home sewing*, a complex machine stitch pattern made by coordinated motions of needle and feed, appearing as very close stitches forming a narrow rectangle of stitching that is usually composed of four stitch segments, one on each side and on each of the two ends of the rectangle.
   [D13.54] D5646
- cable twist, *n*—the construction of cabled yarn, cord, or rope in which each successive twist is in the opposite direction to the preceding twist; an S/Z/S or Z/S/Z construction.
   [D13.58] D4849
- calf girth, *n*—*in body measurements*, the maximum circumference around the leg between the knee and ankle, parallel to the floor. [D13.55] D4849
- calibrate, v—to determine and record the relationship between a set of standard units of measure and the output of an instrument or test procedure. [D13.58] D4849
- calibration cotton standards, *n*—bales of cotton with established values of micronaire, length, uniformity index and breaking tenacity (strength) for the purpose of calibrating cotton classification instruments for length, uniformity index and breaking tenacity (strength).
   [D13.11] D7139
- **cam lock slider,** n—a slider that incorporates a curled projection or projections on the pull that extends through a window or windows to effect a locking action by pressing against the interlocking elements when the cam lock slider is in the locked position. [D13.54] D2050
- camisole, *n*—waist-length, straight-cup top with shoulder straps worn under outerwear. [D13.61] D7022
- camping tentage, *n*—any portable temporary shelter or structure designed to protect persons from the elements, all or a portion of the covering which is made of fabric or other pliable materials. [D13.52] D123
- candidate bale, *n*—bale of saw ginned cotton selected for potential use as a calibration cotton standard. [D13.11] D7139
- capacity, *n*—for tensile testing machines, the maximum force for which the machine is designed. [D13.58] D4849
- **carbonized and neutralized wool,** *n*—a term descriptive of scoured wool processed to destroy cellulosic impurities by treating with a mineral acid or an acid salt, drying and baking, crushing, and dusting out the embrittled cellulosic matter followed by neutralization of the acidified wool. [D13.13] D4845
- carded wool, *n*—scoured wool which has been processed through a carding machine. [D13.13] D4845
- carded yarn, *n*—an organized, continuous strand of staple fibers produced by carding, drawing, roving formation, and spinning. (Compare with combed yarn.) [D13.58] D3888
- carding, v—a mechanical preparation, utilized by staple fiber spinning systems, that cleans, straightens, and aligns fibers using wire-covered rolls (or cylinders) that converts fibers into a sliver. [D13.58] D3888

care instructions, n—in textiles, a series of directions that describes practices which should refurbish a product without adverse effects and warn against any part of the directions which one could reasonably be expected to use that my harm the item. [D13.62] D3136

- care label, *n*—*in textiles*, a label or other affixed instructions that report how a product should be refurbished [D13.62] D3136
- care procedure, *n*—*in textiles*, one or more refurbishing methods to which products may be subjected for soil and stain removal and aesthetic improvement such as appearance restoration or hand. [D13.62] D3136
- care symbol, *n*—a pictorial symbol that gives directions for refurbishing a consumer textile product. [D13.62] D3136

career apparel, *n*—garments, the styling and performance of which are designed for various end uses so as to be suitable for on-the-job wear in a variety of businesses and professions. (See also dress career apparel and vocational career apparel.)
 [D13.61] D7022

career apparel, *n*—garments which are manufactured for a variety of end uses and for which performance requirements vary. [D13.61] D7022

career apparel, dress, *n*—a category of tailored uniform in which abusive wear is not common and in which appearance is much more important than durability (see also career apparel, career apparel, vocational).[D13.61] D7022

<b>career apparel, vocational,</b> <i>n</i> —a type of garment worn as a uniform in which abusive wear is common and du more important than appearance (see also <b>career apparel, dress, career apparel</b> ).	rability is g [ <b>D13.61</b> ]	5
carpet, <i>n</i> —all textile floor coverings not designated as rugs.	[D13.21]	D5684
carpet module, <i>n</i> —textile floor covering sections usually having dimensions of less than $1 \text{ m}^2$ .	[D13.21]	D5684
carpet sweep, v-remove loose soil particles and lint from the textile floor covering surface using	*	weeper. D5253
<b>carpet sweeper,</b> <i>n</i> —a manually powered machine which has rotary brushes and which is used for light surface and rugs.	cleaning of <b>[D13.62]</b>	-
<b>carrier</b> , <i>n</i> — <i>in braiding machinery</i> , that part of a braiding machine that holds the package of yarn, thread, or or yarn when the machine is operated.	cord, and car [ <b>D13.18</b> ]	
case, <i>n</i> — <i>in textiles</i> , a shipping unit, usually a carton, box, bale, or other container holding a number	of yarn pa [ <b>D13.58</b> ]	
<b>cashmere</b> , <i>n</i> — <i>in roving, yarn, or fabrics</i> , cashmere hair or products made therewith having a cashmere coarecceeding a specified maximum percentage by length.	rse-hair con [D13.13]	
cashmere coarse-hair, n-those coarse fibers in cashmere hair having widths greater than 30 µm.	[D13.13]	D4845
<b>cashmere coarse-hair content</b> , <i>n</i> —the total length of the cashmere coarse-hair fibers that are present, express of the total length of all the cashmere hair fibers; that is, the percentage by length of cashmere coarse-ha		
cashmere down, <i>n</i> —those fibers in cashmere hair widths of 30 µm or less.	[D13.13]	D4845
cashmere hair, <i>n</i> —the fibers produced by a form of goat ( <i>Capra hircus</i> ) indigenous to Asia and known as	the cashme [D13.13]	-
<b>catenary length</b> , $n$ —the difference between the length of the shortest and the longest component in a plied after twisting.		les cord <b>D6477</b>
center back waist length, n-in body measurements, the vertical distance along the spine from the cerv	vicale to the <b>[D13.55]</b>	
<b>center front waist length</b> , <i>n—in body measurements</i> , the vertical distance from the neck baseline at the center level.	er front to tl [D13.55]	he waist D5219
cervicale, <i>n</i> — <i>in anatomy</i> , the prominent point of the seventh or lowest neck vertebra at the back of the body	. [D13.55]	D5219
cervicale height, <i>n</i> —the vertical distance from the cervicale to the floor, taken with subject standing a	and without [ <b>D13.55</b> ]	
<b>cervicale height (infant special case),</b> $n$ —the straight distance from the cervicale to the soles of the feet, take down flat with legs extended and foot positioned at 1.57 rad (90°) to the leg.	n with subje [ <b>D13.55</b> ]	
<b>cervicale to bust point</b> , <i>n</i> — <i>in body measurements</i> , the distance from the cervicale around the base of the ne bust point.	ck and dow [D13.55]	
<b>cervicale to knee height</b> , <i>n</i> —the vertical distance from the cervicale to a point level with the midpoint of the (or crease).	ne back of t [ <b>D13.55</b> ]	
<b>cervicale to knee height (infant special case),</b> <i>n</i> —the straight distance from the cervicale to a point level we the back of the knee (or crease), taken with subject lying down flat with legs extended.	ith the mid [ <b>D13.55</b> ]	1
<b>cervical to wrist</b> , <i>n</i> — <i>in body measurements</i> , with the arm bent, the distance from the cervical to the should outside of the arm, over the elbow to the greater prominence on the outside of the wrist.	ler joints, al [D13.55]	
<b>cervical to wrist length,</b> $n$ —the distance from the cervicale over the top of the shoulder joint, along the outsit the elbow to the prominent wrist bone, taken with the arm bent 1.57 rad (90°) and the hand placed on the hip		
<b>chafer fabric</b> , <i>n</i> — <i>in tire fabrics</i> , a woven fabric, usually coated with unvulcanized rubber, which is laid aroun before vulcanization.	nd the bead [D13.19]	
<b>chain</b> , <i>n</i> —the portion of a slide fastener, without its components (top stops, bottom stops, slider, separating formed by alternately interlocking the elements of one stringer with the elements of an opposing stringer.		

### ∰ D123 – 19

- chain front, n—a general reference of the slide fastener when viewed from the element side on a continuous element fastener (CEF). For slide fastener designs where the chain is bilaterally symmetrical (such as an IEF for example) the front is generally referenced by the location of the slider tab, on a single tab slider, when opening or closing the chain. [D13.54] D2050
- chain thickness, *n*—the measurement from front to back of the chain. On a continuous element fastener (CEF) the measurement includes the tape and sewing threads on a sewn type fastener or the tape and yarns for securing the element to the tape on a woven type of fastener if these parts extend beyond the element. [D13.54] D2050
- chain width, *n*—the measurement between the shoulders of the interlocked elements or between the outermost edges of the bead if the bead extends beyond the elements.[D13.54] D2050
- change in surface appearance, *n*—for pile yarn floor coverings, the physical affect of changing the use-surface by mechanical means or foot traffic. [D13.21] D5684
- charring, *n*—the formation of carbonaceous residue as the result of pyrolysis or incomplete combustion. [D13.92] D4391
- chemical wash, *n*—*in rug cleaning*, a specialized professional process used on oriental rugs. [D13.62] D5253
- **chest-bust girth,** n— the horizontal circumference around the torso, taken under the arms and across the fullest part of the chest/bust apex including the lower portion of the shoulder blades. [D13.55] D5219
- chest girth, n—in body measurements, the circumference of the body over the shoulder blades, under the arms and across the upper chest. (Compare bust girth.)
  [D13.55] D5219
- chlorine bleach, *n*—a bleach that releases the hypochlorite ion in solution, for example, sodium hypochlorite. [D13.62] D3136
- chopped strand, *n*—*in glass textiles*, a strand made from short predetermined lengths of cut continuous filament and used as a reinforcing material. (See also strand.)
  [D13.18] D7018
- chord modulus, *n*—in a *stress-strain curve*, the ratio of the change in stress to the change in strain between two specified points on the curve. [D13.58] D4848
- circular bend, *n*—simultaneous, multidirectional deformation of a fabric in which one face of a flat specimen becomes concave and the other becomes convex. [D13.59] D4850
- clamp, *n*—that part of a testing machine used to grip the specimen by means of suitable jaws. [D13.58] D4849
- **clean-finish seam-finish**, n—in home sewing, a seam finish in which the cut edge is folded under and the fold line is edge stitched. <u>ASTM D123-19</u> [D13.54] D2050
- clean wool fiber present, *n*—*in raw wool*, the mass of wool base present in the raw wool, adjusted to a moisture content of 12 %, an alcohol-extractable content of 1.5 %, and a mineral matter content of 0.5 %. [D13.13] D4845
- cleaning agent, *n*—a chemical compound or formulation of several compounds which loosens, disperses, dissolves, or emulsifies soil to facilitate removal by mechanical action.[D13.63] D7023
- clip mark, *n*—a visible deformation near the edge of a fabric parallel with the lengthwise direction caused by pressure exerted by a clasping device on a clip tenter frame. (See also pin mark.) [D13.59] D3990
- **clo**, *n*—unit of thermal resistance equal to  $0.155 \text{ Km}^2/\text{W}$ . [D13.51] D4920
- **closed-face fabric**, n—a face or shell fabric of closed construction so that no open-face areas appear. [D13.61] D7022
- coarse end, *n*—a larger than normal diameter warp end. (Compare fine end.) [D13.59] D3990
- coarse pick, *n*—*in woven fabrics*, one or more picks of larger diameter than the normal filling yarn in the fabric. [D13.59] D3990
- coat, n—an outer garment which covers at least the upper half of the body, has sleeves and a front opening, and is usually worn over another garment, such as a shirt or dress.[D13.61] D7022
- coated fabric, *n*—a flexible material composed of a fabric and any adherent polymeric material applied to one or both surfaces. (See also laminated fabric.) [D13.59] D4850
- coating slub, *n*—for coated inflatable restraint fabrics, an irregularly shaped lump of coating material on the surface of the coated layer resembling a yarn slub. [D13.20] D6799
- coating streak, *n*—for coated inflatable restraint fabrics, minor variation in the color or opacity of the coated layer. [D13.20] D6799

🕀 D123 – 19

coating transfer, *n*—for coated inflatable restraint fabrics, the presence of coating material on the uncoated side, covering one or more yarns. [D13.20] D6799 cockles, *n*—in yarns, irregular, thick, uneven lumps. [D13.58] D4849 coefficient of friction, n—the ratio of the tangential force that is needed to maintain uniform relative motion between two contacting surfaces to the perpendicular force holding them in contact. [D13.58] D4849 [D13.11] D7139 **coefficient of length variation**, *n*—a measure of fiber length distribution. coefficient of variation, CV, n-a measure of the dispersion of observed values equal to the standard deviation for the values divided by the average of the values; may be expressed as a percentage of the average (%CV). [D13.58] D4849 coefficient of variation unevenness, *n*—*in textiles*, the standard deviation of the linear densities over which unevenness is measured expressed as a percentage of the average linear density for the total length within which unevenness is measured. (See also unevenness and mean deviation unevenness.) [D13.58] D4849 cohesive force, *n*—*in a textile strand*, the force required to overcome fiber cohesion as the strand is being reduced in linear density. [D13.58] D4849 collecting surface, *n*—*in the rotor of an open-end spinning machine*, that portion of the internal surface of the rotor, often in the form of a groove, in which the fibers are condensed for assembly into yarn. [D13.58] D3888 color bleeding, *n*—the loss of color from a dyed fabric when immersed in water, drycleaning solvent, or similar liquid medium, with consequent coloring of the liquid medium. (Compare color staining, crocking.) [D13.59] D3990 [D13.59] D4850 color contrast, *n*—*in textiles*, a general term for a visible color difference between two adjacent areas. color grading, *n*—the act of identifying a specimen by a color grade or color score that is specific to the color and the material graded. [D13.11] D7139 color lamp, *n*—in color determination of cotton with a Color Meter, a lamp with a specific energy output function used in conjunction with special tristimulus filters to obtain a desired response function. [D13.11] D7139 color meter, n-an instrument which measures the fiber sample color as presented in the viewing window, in terms of the tristimulus values Y and Z and transmits these values to the IC/TC for further processing. [D13.11] D7139 color space, *n*—specific to this standard, the daylight color of opaque specimens are represented by points in a space in terms of three color scales: reflectance,  $R_d$ , and the chromaticity coordinates for redness or greenness,  $\pm a$ , and yellowness or blueness,  $\pm b$ . [D13.11] D7139 color stability, *n*—*in coated glass textiles*, the ability of the applied coating to resist fading from exposure to sunlight and water. [D13.18] D7018 color staining, n—the undesired pickup of color by a fabric: (1) when immersed in water, drycleaning solvent, or similar liquid medium, that contains dyestuffs or coloring material not intended for coloring the fabric, or (2) by direct contact with other dyed material from which color is transferred by bleeding or sublimation. (Compare crocking and color bleeding.) [D13.59] D3990 colored fiber, *n*—*in wool top*, any fiber the color or shade of which differs from the normal color or shade of the fiber mass of the sample. [D13.13] D4845 colorfastness, n—the resistance of a material to change in any of its color characteristics, to transfer its colorant(s) to adjacent materials, or both, as the result of exposure of the material to any real or simulated environment that might be encountered during processing, storage, use or testing of the material. [D13.58] D4849 combed yarn, *n*—an organized, continuous strand of staple fibers produced by carding, roving, drawing, formation, combing, and spinning. (Compare with carded yarn.) [D13.58] D3888 comber/brusher, *n*—an instrument which prepares the test beard of fibers for length, length uniformity, strength, and elongation measurements by combing the test specimen to remove loose or unclamped fibers and paralleling the individually clamped fibers, and by brushing the clamped fibers to remove fiber crimp and smooth the test beard of cotton. [D13.11] D7139 combing, v—an optional mechanical preparation process undertaken to remove additional trash particles, neps, and short fibers (typically fibers less than 12.5 mm or 0.5 in.) from carded sliver to further align the remaining fibers. [D13.58] D3888

combing, v—in flax, the processing of tow so as to produce tops or sliver which have the staple length and width suitable for use in the worsted spinning system.
[D13.17] D6798

combing wool, *n*—wool that is strong and strictly of combing length, that is, 2 in. (50 mm) or more. [D13.13] D4845

- combustible textile, n—a textile that will ignite and burn or that will give off vapors that will ignite and burn when subjected to external sources of ignition. (See noncombustible textile.)[D13.92] D4391
- **combustion**, n—a chemical process of oxidation that occurs at a rate fast enough to produce heat and usually light either as glow or flames. [D13.92] D4391
- comforter, n—a bedcovering assembly, consisting of an insulating filler secured between two layers of fabric, used primarily to reduce heat loss.
  [D13.63] D7023
- command, *n*—a two letter sequence, always written in capital letters, that governs interpretation of formatted data. Also known as a syntax command. [D13.66] D6963
- commercial allowance, n—an arbitrary value equal to the commercial moisture regain plus a specified allowance for finish, used with the mass of scoured, oven-dried yarn, to compute (1) yarn linear density, (2) the commercial or legal mass of a shipment or delivery of any specific textile material (see also commercial moisture regain) or (3) the mass of a specific component in the analysis of fiber blends.
- commercial composition, *n*—*in wool*, the percentages by weight of wool base, moisture, and other non-wool base components in wool to which a specific commercial designation is applied. [D13.13] D4845
- commercial designation, *n*—*in wool*, a term applied to a lot of wool in a stated form, and having a specified commercial composition. [D13.13] D4845
- commercial laundering—a process by which textile products or specimens may be washed, bleached, rinsed, dried, and pressed typically at higher temperatures, higher pH and longer times than used for home laundering.
   [D13.62] D3136
- commercial mass, *n*—billed mass as determined by a generally accepted method or as agreed upon between the purchaser and supplier. [D13.51] D4920
- commercial moisture content, *n*—for wool, the moisture calculated as a percentage of the weight of the wool, top, noils, yarn, fabric, etc., in the "as-is" condition; that is, containing whatever moisture, oil, grease, or other extraneous matter that may be present.

   [D13.13]
   D4845
- commercial moisture regain, *n*—a formally adopted arbitrary value, to be used with the oven-dried mass of textile fibers, when calculating the commercial mass of a shipment or delivery. [D13.51] D4920
- **commercial weight**, n—billed weight as determined by a generally accepted method or as agreed to by the purchaser and the seller. ASTM D123-19 [D13.13] D4845
- compact spinning, n—a modified ring-spinning process that alters the geometry of the spinning twist triangle to produce a more uniform structure by binding fibers into the body of the yarn.
   [D13.58] D3888
- complex machine stitch pattern, *n*—*in home sewing*, a machine stitch pattern formed when two or more simple machine stitch patterns are combined in one repeating unit. (Compare simple machine stitch pattern.) [D13.54] D5646
- complex seam, *n*—*in home sewing*, a seam made in two or more steps. (Ant. plain seam.) [D13.54] D5646
- component, *n*—as used with textile fiber polymers, a polymer with distinguishable properties. [D13.58] D4849
- components, *n*—for pile yarn floor covering, the individual yarn or fabric elements into which a pile yarn floor covering can be separated. [D13.21] D5684
- compression, *n*—the act, process, or result of compacting, condensing, or concentrating. [D13.58] D4848
- compression molded button, n—a button or button blank which is produced by compression molding thermoset-molding compounds such as urea-formaldehyde, melamine-formaldehyde, styrene-modified polyester or any combination thereof. This method using styrene modified polyester resin, and having in its formulation pearlescent pigments which are oriented in the molding process, form a button or button blank which resembles natural shell.
   [D13.54] D2050
- compression molding, *n*—the method of molding a material already in a confined cavity by applying pressure and usually heat. [D13.54] D2050

compression recovery, <i>n</i> —the degree to which a material returns to its original dimension(s) after removal of	a compressiv	e force
	[D13.58]	D4848
compression resistance, <i>n</i> —the ability of a material to oppose deformation under a compressive force.	[D13.58]	D4848
<b>compressive force</b> , <i>n</i> —the perpendicular force applied to surfaces(s) of a material in compaction.	[D13.58]	D4848

**condition,** v—to bring a material to moisture equilibrium with a specified atmosphere.

[D13.51] D4920

- cone, n—in textiles,(1) a yarn holder or bobbin of conical shape used as a core for a yarn package of conical form, also called a cone core. (2) the yarn package obtained when yarn is wound upon a cone core. [D13.58] D4849
- connecting ring, *n*—a device used to secure a pull, having more than one component in its design, to the bail of the slider. This connecting ring may be of various shapes. [D13.54] D2050
- constant-rate-of-extension tensile testing machine (*CRE*), *n*—a testing machine in which the rate of increase of the specimen length is uniform with time. [D13.59] D4850
- constant-rate-of-extension type tensile testing machine (*CRE*), *n*—*in tensile testing*, an apparatus in which the pulling clamp moves at a uniform rate, and the force-measuring mechanism moves a negligible distance with increasing force, less than 0.13 mm (0.005 in.).
   [D13.13,D13.58] D4845,D4849
- constant-rate-of-load tensile testing machine (*CRL*), *n*—*in tensile testing*, an apparatus in which the rate of increase of the force is uniform with time after the first 3 s and the specimen is free to elongate, this elongation dependent on the extension characteristics of the specimen at any applied force. [D13.58] D4849
- constant-rate-of-load (CRL) tensile testing machine, n—a testing machine in which the rate of increase of the load being applied to the specimen is uniform with time after the first 3 s.[D13.59] D4850
- constant-rate-of-loading (CRL) type tensile testing machine, n—in tensile testing, an apparatus in which the rate of increase of the force is uniform with time after the first 3 s and the specimen is free to elongate, this elongation being dependent on the extension characteristics of the specimen at any applied force. [D13.13] D4845
- constant-rate-of-traverse (CRT) tensile testing machine, n—a testing machine in which the pulling clamp moves at a uniform rate and the load is applied through the other clamp which moves appreciably to actuate a weighing mechanism, so that the rate of increase of force or elongation is dependent upon the extension characteristics of the specimen. [D13.59] D4850
- constant-rate-of-traverse tensile testing machine (*CRT*), *n*—*in tensile testing*, an apparatus in which the pulling clamp moves at a uniform rate and the force is applied through the other clamp which moves appreciably to actuate a weighing mechanism, so that the rate of increase of force or extension that is usually not constant and is dependent upon the extension characteristics of the specimen. [D13.58] D4849
- constant-rate-of-traverse (CRT) type tensile testing machine (), n—in tensile testing, an apparatus in which the pulling clamp moves at a uniform rate and the force is applied through the other clamp which moves appreciably to actuate a force-measuring mechanism, producing a rate of increase of force or extension that is usually not constant and is dependent on the extension characteristics of the specimen.
   [D13.13] D4845
- constructional units, *n*—*in pile floor covering*, the needles, pitch, rows, shot, etc. into which the warp and filling yarns are commonly grouped. [D13.21] D5684
- consumer care, *n—of consumer textile products*, cleaning and maintenance procedures as customarily undertaken by the ultimate user. [D13.62] D3136
- consumer textile product, n—a textile product intended to satisfy human wants and needs.[D13.62]D3136container, n—a receptacle designed to hold a material, or to give integrity to the material.[D13.58]D4849
- contamination, *n*—for coated inflatable restraint fabrics, the presence of non-coating material in the coated layer. [D13.20] D6799
- continuous element, n—a configured element formed continuously along a length of monofilament into the shape of a spiral (or coil), serpentine or other configuration. The continuous element contains heads formed along its length at the crimp for the purpose of interlocking. The side of the continuous element opposite the crimp is the shoulder and bears the slider flanges during opening and closing of the elements. (Compare separate element.) [D13.54] D2050
- continuous element slide fastener, *n*—CEF. can be a sewn type or a woven type slide fastener. The sewn type CEF is a slide fastener consisting of two continuously formed elements, each attached to one of the opposing edges of two tapes, which are engaged and disengaged by the movement of a slider. The continuous elements of the sewn type CEF are formed separately from the tapes and later joined by sewing. The CEF woven type slide fastener consists of two continuous elements formed integrally with the tape, which are engaged and disengaged by movement of the slider. (Compare individual element slide fastener.) [D13.54] D2050
- continuous filament yarn, *n*—a yarn made of filaments that extend substantially throughout the length of the yarn. [D13.18] D7018
