

Designation: A920/A920M – 14 (Reapproved 2019)

Standard Specification for Steel Bars, Microalloy, Hot-Wrought, Special Quality, Mechanical Properties¹

This standard is issued under the fixed designation A920/A920M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers hot-wrought, special quality microalloyed carbon steel bars intended for use in applications where as-rolled mechanical properties are desired. A typical end use is hydraulic cylinder shafts.

1.2 The bars shall be furnished to chemical composition and mechanical properties as provided herein. Chemical composition is based on standard carbon steel grades modified to include microalloying elements such as columbium (niobium), vanadium, or molybdenum. Three strength classes are available, designated 75 [520], 80 [550], and 100 [690], corresponding to the minimum yield strength in ksi.

1.3 Sections and sizes of bar steels available are covered in Specification [A29/A29M](#).

1.4 Supplementary Requirements S1 to S5 are provided for use when additional controls or requirements are desired. These shall apply only when specified on the purchase order.

1.5 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system are not necessarily exact equivalents; therefore, to ensure conformance with the standard, each system shall be used independently of the other, and values from the two systems shall not be combined.

1.6 Unless the order specifies the applicable “M” specification designation, the material shall be furnished to the inch-pound units.

1.7 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

¹ This specification is under the jurisdiction of ASTM Committee A01 on Steel, Stainless Steel and Related Alloys and is the direct responsibility of Subcommittee A01.15 on Bars.

Current edition approved Sept. 1, 2019. Published September 2019. Originally approved in 1993. Last previous edition approved in 2014 as A920/A920M–14. DOI: 10.1520/A0920_A0920M–14R19.

3. Terminology

3.1 *Definitions of Terms Specific to This Standard*:

3.1.1 *microalloyed steels, n*—carbon steels to which small quantities of certain elements are added in order to enhance mechanical properties.

3.1.1.1 *Discussion*—This enhancement of mechanical properties results from control of the temperature and cooling rate during the hot-rolling process.

4. Ordering Information

4.1 Orders for material supplied to this specification should include the following, as required, to describe adequately the desired material:

4.1.1 Quantity (weight or number of bars);

4.1.2 Name of material (hot-rolled microalloyed steel bars);

4.1.3 Dimensions;

4.1.4 ASTM specification number and date of issue;

4.1.5 Grade designation or chemical composition limits (see Section 7);

4.1.6 Class;

4.1.7 Additions to the specification and Supplementary Requirements, if required; and,

4.1.8 End use.
