About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTROACOUSTICS – SIMULATORS OF HUMAN HEAD AND EAR –

Part 7: Head and torso simulator for the measurement of sound sources close to the ear

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60318-7 has been prepared by IEC technical committee 29: Electroacoustics. It is an International Standard.

This publication contains attached files in the form of 3D PDF files. These files are intended to be used as a complement and do not form an integral part of the publication.

This edition cancels and replaces IEC TS 60318-7:2017. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to IEC TS 60318-7:2017:

- a) changing the title;
- b) extending the scope to sound sources close to the ear.

The text of this International Standard is based on the following documents:

Draft	Report on voting
29/1118/FDIS	29/1121/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 60318 series, published under the general title *Electroacoustics – Simulators of human head and ear*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

ELECTROACOUSTICS – SIMULATORS OF HUMAN HEAD AND EAR –

Part 7: Head and torso simulator for the measurement of sound sources close to the ear

1 Scope

This part of IEC 60318 describes a head and torso simulator, or manikin, intended for the measurement of sound sources placed close to the ear in the frequency range from 100 Hz to 16 000 Hz.

The manikin described in this document is intended for airborne acoustic measurements only. It is not suitable for measurements which depend upon vibration transmission paths such as bone conduction, or for measurements requiring the simulation of bone or tissue.

This document specifies the manikin in terms of both its geometrical dimensions and its acoustical properties. Only manikins compliant with both sets of specifications are in conformance with this document.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies: <http://standards.iteh.ai/catalog/standards/sist/516c8222-77d0-4df2-982b-43ff51f2a144/iec-60318-7-2022>

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

manikin

head and torso simulator

simulator of a median adult human head and part of the torso extending in total from the top of the head to the waist and designed to simulate the sound pick-up characteristics and acoustic diffraction

Note 1 to entry: The head and torso simulator includes two pinna simulators, and at least one occluded-ear simulator.

3.2

manikin type

designation of the manikin as either anatomical or geometrical in shape

3.3

pinna simulator

device which has the approximate shape and dimensions of a median adult human pinna

3.4

ear simulator

device for measuring the acoustic output of sound sources where the sound pressure is measured by a calibrated microphone coupled to the source so that the overall acoustic impedance of the device approximates that of the normal human ear at a given location and in a given frequency band

Note 1 to entry: In this document, an ear simulator comprises an ear canal extension and an occluded-ear simulator (see 4.2.4).

3.5

occluded-ear simulator

ear simulator which approximates the acoustic transfer impedance of the inner part of the ear canal, from the tip of an ear insert to the eardrum

Note 1 to entry: An occluded-ear simulator is standardised in IEC 60318-4.

3.6

ear canal extension

device that provides a connection between the occluded-ear simulator and the aperture of the device simulating the concha

3.7

reference plane of the occluded-ear simulator

plane perpendicular to the axis of the cavity of the simulator, chosen to pass through the position normally occupied by the tip of an ear mould in a human ear canal

3.8

reference point of the manikin

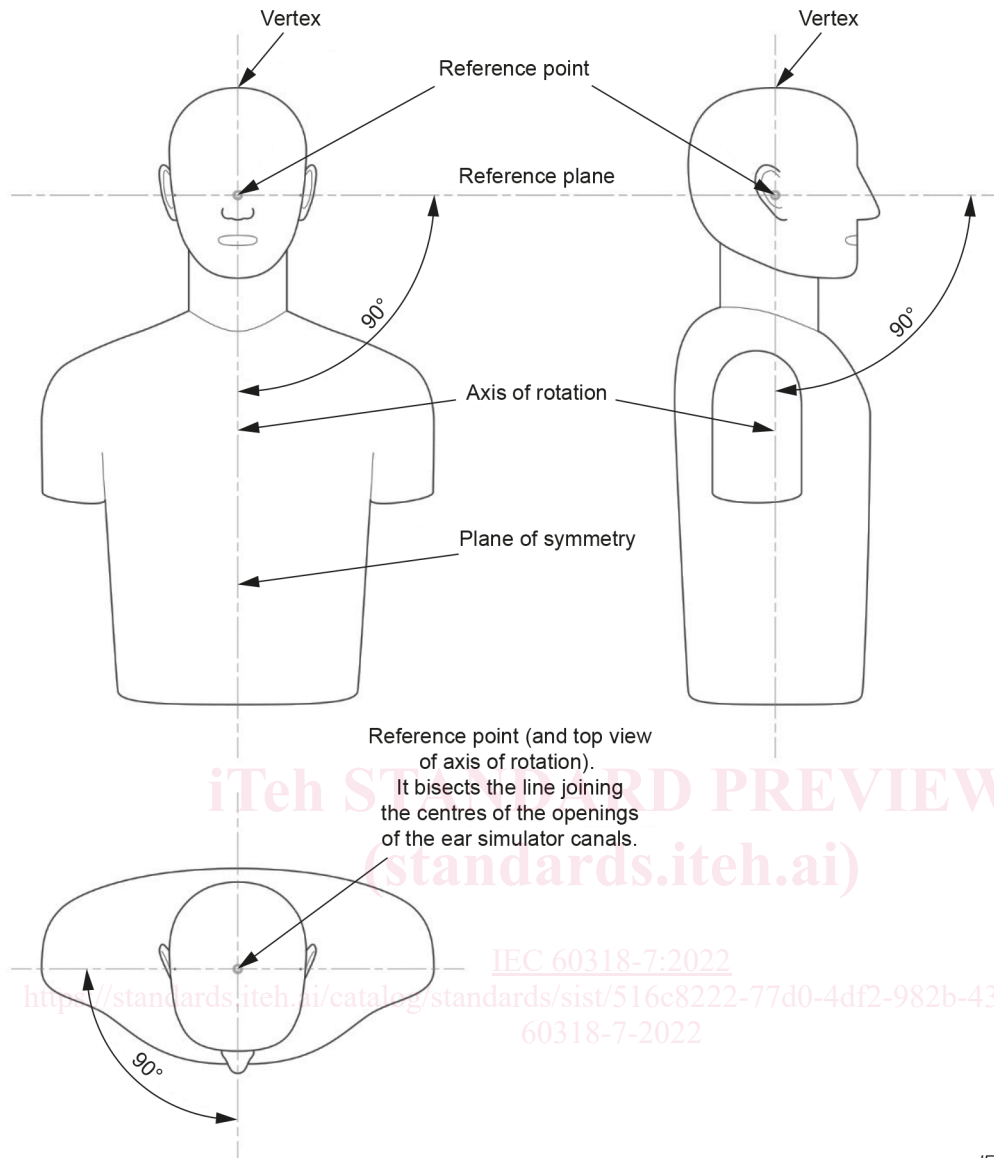

point bisecting the line joining the right and left ear canal entrance points (EEP, 3.17)

3.9

plane of symmetry of the manikin

plane passing through the reference point of the manikin that divides the left and right portions of the manikin into symmetrical halves, within the allowed tolerances, where left and right is interpreted as for the human torso

Note 1 to entry: See Figure 1.

NOTE The reference point of the manikin is situated within the head.

Figure 1 – Manikin geometrical references

3.10

axis of rotation of the manikin

straight line about which the manikin can be rotated, passing through the reference point of the manikin, lying in the plane of symmetry of the manikin, and having a direction that would be vertical if the manikin were mounted in a position corresponding to that of a standing person

SEE: Figure 1.

3.11

reference plane of the manikin

plane perpendicular to the axis of rotation that contains the reference point of the manikin

SEE: Figure 1.

3.12 test point

reproducible position in the test space at which the sound pressure level is measured with the manikin absent and at which the reference point of the manikin is to be located for test purposes

Note 1 to entry: See Figure 2.

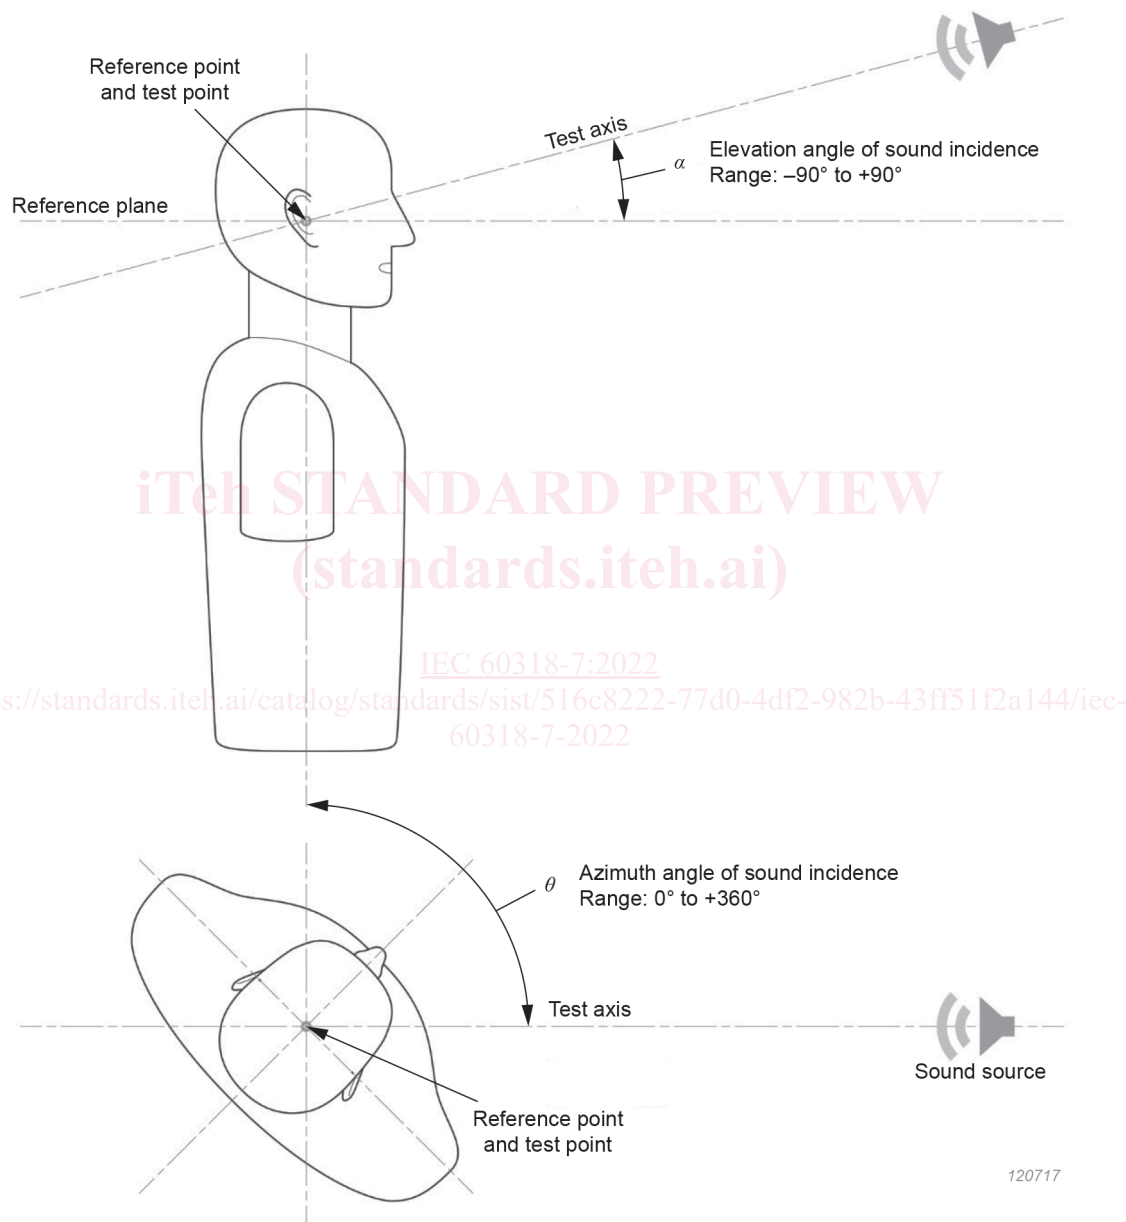

Figure 2 – Coordinate scheme for azimuth and elevation angles

3.13 test axis

line joining the test point and the acoustic centre of the sound source

SEE: Figure 2.

3.14**test plane**

plane perpendicular to the test axis and containing the test point

3.15**azimuth angle of sound incidence**

angle between the plane of symmetry of the manikin and the plane defined by the axis of rotation of the manikin and the test axis

Note 1 to entry: When the manikin faces the sound source, the azimuth angle of sound incidence is defined as 0° . When the right ear of the manikin faces the sound source, the angle is defined as $+90^\circ$. When the left ear of the manikin faces the sound source, the angle is defined as $+270^\circ$.

SEE: Figure 2.

3.16**elevation angle of sound incidence**

angle between the reference plane of the manikin and the test axis

Note 1 to entry: When the vertex points towards the sound source, the elevation angle is defined as $+90^\circ$. When the test axis lies in the reference plane of the manikin, the elevation angle is defined as 0° .

SEE: Figure 2.

3.17**ear canal entrance point****EEP**

point located at the centre of the manikin ear canal at the junction between concha and ear canal extension

3.18**transverse plane of the manikin**

plane perpendicular to the plane of symmetry of the manikin and containing the axis of rotation

3.19**reference position of the manikin**

position of the manikin in the test space where the reference point of the manikin coincides with the test point, and the azimuth and elevation angles are both equal to zero

3.20**manikin free-field frequency response**

difference, as a function of frequency, between the sound pressure level at the ear simulator microphone with the reference point of the manikin at the test point within a free-field measurement environment and the sound pressure level at the test point with the manikin absent

3.21**manikin diffuse-field frequency response**

difference, as a function of frequency, between the sound pressure level at the ear simulator microphone with the reference point of the manikin at the test point within a diffuse-field measurement environment and the sound pressure level at the test point with the manikin absent

4 Construction

4.1 General

The simulator consists of a head mounted on a torso that extends to the waist. The head is equipped with simulated pinnae and one or two occluded-ear simulators formed of cavities having acoustic impedance terminations corresponding to that of a median human adult, and microphones located at positions corresponding to the eardrums. It has been designed to provide acoustic diffraction similar to that encountered around the median human head and torso. Measurement results obtained with a manikin can differ substantially from similar measurements made on an individual person, due to anatomical variations. Measurement results for a given hearing aid obtained with different models of manikin conforming to this document can also differ, depending on the type and the method of fitting the hearing aid. The same holds for measurement results obtained with the same manikin model but with different models of pinna simulators.

NOTE 1 Above 10 kHz, an occluded-ear simulator conforming to IEC 60318-4 does not simulate the acoustic impedance of the human ear and can only be used as an acoustic coupler in this frequency range.

The realization of the manikin conforming to this document can be either anatomically shaped (see Annex A) or geometrically shaped (see Annex B) and can have different anatomically shaped pinna simulators. The realization of the ear canal entrance, together with the additional ear canal extension, can be either cylindrical or tapered in shape. This enables measurements of all types of insert devices, for example behind-the-ear (BTE) and in-the-ear (ITE) hearing aid designs.

NOTE 2 Nevertheless, some specific ITE hearing aid models might not be compatible.

This document covers both the geometrical dimensions of the manikin's head, torso, pinnae and ear canals and the manikin's acoustical characteristics. As a minimum, the manikin shall be specified with cylindrical ear canal extensions and comply with the appropriate acoustical characteristics. Optionally, tapered ear canal extensions may also be specified. The model and type of the manikin used (see 3.2) and the model of the pinna simulator used shall be stated when giving results of measurements made with the manikin.

4.2 Geometrical dimensions of the manikin

4.2.1 Head and torso

The geometrical dimensions of the head and the torso are illustrated in Figure 3, and listed in Table 1. The realization of the head (excluding the pinnae) and of the torso can be either anatomically shaped or geometrically shaped. Anatomically shaped manikins are not necessarily completely symmetrical and may be described as "quasi-symmetrical", when staying within the allowable differences from the completely symmetrical manikin. Both anatomically and geometrically shaped manikins shall conform to the specified ranges of geometrical dimensions and acoustical characteristics specified in this document.

The acceptance interval of the quasi-symmetrical left and right portion of the manikin shall be ± 2 mm for the head and ± 3 mm for the torso with respect to the plane of symmetry.

NOTE For measurements that include both head and torso dimensions, for example EEP to shoulder, the acceptance interval sums up to ± 5 mm.

NOTE For position of ear canal entrance point (EEP), see Figure 4.

Figure 3 – Illustration of manikin head and torso dimensions

IEC 60318-7:2022

<https://standards.iteh.ai/catalog/standards/sist/516c8222-77d0-4df2-982b-43ff51f2a144/iec-60318-7-2022>

Table 1 – Manikin head and torso dimensions

Linear dimension of	Nominal	Minimum	Maximum	Average human data [1] ¹
	mm	mm	mm	mm
Head breadth	151	148	153	151
Head length	195	190	204	188
EEP to vertex	130	128	135	130
EEP to EEP distance	132	130	134	132
EEP to occipital wall	95	93	99	95
Chin-to-vertex length	220	217	225	222
EEP to shoulder ^c	175	169	181	176
Neck diameter	113	111	115	112
Shoulder breadth	432	399	456	427
Chest breadth	282	280	284	291
Chest depth	219	180	241	–
Shoulder depth ^d	110	108	161	–
Shoulder location ^{b, e}	6	–4	20	–
Shoulder position ^{a, f}	78	76	80	–
Manikin height	–	600	–	–

NOTE To be independent of the type of pinna simulator used, this document uses the ear canal entrance point (EEP) rather than the trignon as a reference point. The differences between both sets of values are chosen in conformity with [2] to be 5 mm for EEP to vertex, –11 mm for left EEP to right EEP, –3 mm for EEP to occipital wall and –5 mm for EEP to shoulder.

^a For anatomically shaped manikin only.

^b For geometrically shaped manikin only.

^c Measured from the shoulder surface, 175 mm sideways from the plane of symmetry, to the reference plane of the manikin.

^d Measured between front and back shoulder points, 175 mm sideward from the plane of symmetry of the manikin.

^e Measured from the point of the shoulder section, 175 mm sideward from the plane of symmetry, to the transverse plane of the manikin (positive behind transverse plane).

^f Measured between front shoulder point, 175 mm sideward from the plane of symmetry of the manikin to the front-most point on the torso.

4.2.2 Pinna simulators for hearing aid measurements

The right and left pinna simulators shall be anatomically shaped.

NOTE 1 3D representations of example pinna simulators are shown in Annex D.

For each type of manikin, only one pair of pinna simulators with cylindrical ear canal extensions and optionally only one pair of pinna simulators with the tapered ear canal extensions shall be specified. Their principal dimensions and orientation are illustrated in Figure 4 a), b) and c), and listed in Table 2 and Table 3.

The acceptance intervals of the quasi-symmetrical left and right pinna simulator of the manikin shall be ± 2 mm.

¹ Numbers in square brackets refer to the Bibliography.
