This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

Designation: E2161 - 15 E2161 - 15 (Reapproved 2019)

## Standard Terminology Relating to Performance Validation in Thermal Analysis and Rheology<sup>1</sup>

This standard is issued under the fixed designation E2161; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope

1.1 Validation of methods and apparatus is requested or required for quality initiatives or where results may be used for legal purposes.

1.2 This standard provides terminology relating to validating performance of thermal analysis and rheology methods and instrumentation. Terms that are generally understood or defined adequately in other readily available sources are not included.

1.3 The terminology described in this standard is that of the validation process and may differ from that traditionally encountered in ASTM standards.

1.4 A definition is a single sentence with additional information included in a Discussion.

1.5 Terminology commonly used in the study of precision and bias, in thermal analysis, rheology, and thermophysical properties may be found in Terminologies E177, E473, and E1142. Additional information on method validation may be found in the U.S. Pharmacopeia and National Formulary.<sup>2</sup>

<u>1.6 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.</u>

## 3. Terminology

<u>ASTM E2161-15(2019)</u>

accuracy—accuracy, *n*—the agreement between an experimentally determined value and the accepted reference value.

DISCUSSION-

Accuracy is also known as bias in ASTM practice.

**analyte**<u>analyte</u>, <u>n</u><u>the</u> specific component measured in an analysis.

baseline-baseline, n-the resultant analytical trace when no test specimen is present.

blank—blank, *n*—the measured value obtained when a specific component is not present during the measurement.

**bow**—**bow**, *n*—the maximum deviation between an actual instrument reading and the reading predicted by a straight line drawn between upper and lower calibration points, expressed as a percent of full scale.

calibration—calibration, v—to check, adjust, or systematically standardize the gradations of a quantitative measuring signal.

<sup>&</sup>lt;sup>1</sup> This terminology is under the jurisdiction of ASTM Committee E37 on Thermal Measurements and is the direct responsibility of Subcommittee E37.03 on Nomenclature and Definitions.

Current edition approved Sept. 1, 2015 Nov. 1, 2019. Published September 2015 December 2019. Originally approved in 2001. Last previous edition approved in  $\frac{2013}{2015}$  as  $\frac{E2161 - 13}{E2161 - 15}$ . DOI:  $\frac{10.1520}{E2161 - 15.10}$ . DOI:  $\frac{10.1520}{E2161 - 15}$ . DOI:  $\frac{1$
