About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

<https://standards.iteh.ai/catalog/standards/2021/06/06/0688-2021>

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC online collection - oc.iec.ch

Discover our powerful search engine and read freely all the publications reviews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC - webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Également appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Service Clients - webstore.iec.ch/csc

CONTENTS

FOREWORD.....	9
INTRODUCTION.....	11
1 Scope.....	12
2 Normative references.....	13
3 Terms and definitions	13
3.1 General terms	13
3.2 Terms describing transducers according to the measurand	15
3.3 Terms describing transducers according to their output load	17
3.4 Nominal values	17
3.5 Terms describing transducers with provisions to be adjusted by users.....	18
3.6 Influence quantities and reference conditions.....	18
3.7 Errors and variations	19
3.8 Accuracy, accuracy class, class index	19
4 General	19
4.1 Transducer general architecture	19
4.2 Classification of transducers (TRD)	20
5 Requirements for TRD1	20
5.1 Safety requirements: clearances and creepage distances	20
5.2 EMC requirements	20
5.2.1 Immunity	20
5.2.2 Emission	IEC 60688-2021..... 21
5.3 Class index requirements https://www.iteh.ai/catalog/standards/ist/72ca1d98-d659-40d8-9dab-9d559382334f/iec-60688-2021	21
5.3.1 Class index	9d559382334f/iec-60688-2021..... 21
5.3.2 Class index for transducer used with sensors	21
5.3.3 Intrinsic error	21
5.4 Conditions for the determination of intrinsic error	21
5.5 Auxiliary supply.....	23
5.5.1 General	23
5.5.2 DC supply.....	23
5.5.3 AC supply	23
5.6 Input values	24
5.6.1 General	24
5.6.2 Adjustment ranges	24
5.6.3 Preferred nominal values.....	24
5.7 Analogue output signals	24
5.7.1 General	24
5.7.2 Output current.....	24
5.7.3 Compliance voltage.....	24
5.7.4 Maximum output voltage	24
5.7.5 Interference risk of output current.....	24
5.7.6 Output voltage	25
5.8 Output transfer function.....	25
5.9 Digital output signals.....	27
5.10 Ripple (for analogue outputs)	27
5.11 Response time	28
5.12 Variation due to over-range of the measurand.....	28

5.13	Limiting value of the output signal.....	28
5.14	Limiting conditions of operation	28
5.15	Limits of the measuring range.....	28
5.16	Limiting conditions for storage and transport.....	28

iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC 60688:2021](#)

<https://standards.iteh.ai/catalog/standards/sist/72ca1d98-d659-40d8-9deb-9d559382334f/iec-60688-2021>

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTRICAL MEASURING TRANSDUCERS FOR CONVERTING AC AND DC
ELECTRICAL QUANTITIES TO ANALOGUE OR DIGITAL SIGNALS****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication:
<https://standards.itec.ai/catalog/standards/jct/72ca1498-d659-40d8-9deb-9d59382334f/iec-60688-2021>
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60688 has been prepared by IEC technical committee 85: Measuring equipment for electrical and electromagnetic quantities. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2012. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) updating normative references;
- b) additional requirements for specific transducers used for LV monitoring applications;
- c) creation of interface coding to ease selection by the end-user.

The text of this International Standard is based on the following documents:

CDV	Report on voting
85/748/CDV	85/781/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

In this document, the following print types are used:

- requirements and definitions: in roman type;
- NOTES: in smaller roman type;
- *compliance*: in italic type.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

**reconfirmed,
withdrawn,
replaced by a revised edition, or
amended.**

[IEC 60688:2021](http://www.iec.ch/standardsdev/publications)

<https://standards.iteh.ai/catalog/standards/sist/72ca1d98-d659-40d8-9deb-9d559382334f/iec-60688-2021>

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

New transducers can now be equipped with microprocessors that utilise digital data processing, communication methods and auxiliary sensors. This makes them more complex than conventional analogue transducers and gives them considerable added value.

The class index system of classification used in this document is based upon IEC 60051 (all parts). Under this system, the permitted variations of the output signal due to varying influence quantities – ambient temperature, voltage, frequency, etc. – are implicit in the classification.

For those unfamiliar with the class index system, a word of warning is necessary. If, for example, a transducer is classified as class 1, it does not mean that the error under practical conditions of use will be within $\pm 1\%$ of the actual value of the output or $\pm 1\%$ of the full output value. It means that the error should not exceed $\pm 1\%$ of the fiducial value under closely specified conditions. If the influence quantities are varied between the limits specified by the nominal ranges of use, a variation of amount comparable with the value of the class index may be incurred for each influence quantity.

The permissible error of a transducer under working conditions is the sum of the permissible intrinsic error and of the permissible variations due to each of the influence quantities. However, the actual error is likely to be much smaller because not all of the influence quantities are likely to be simultaneously at their most unfavourable values and some of the variations may cancel one another. It is important that these facts be taken into consideration when specifying transducers for a particular purpose.

iTech STANDARD PREVIEW

Furthermore, some of the terms used in this document are different from those used in IEC 60051 (all parts) due to the fundamental differences between indicating instruments and measuring transducers.

[IEC 60688:2021](#)

All statements of performance are related to the output which is governed by two basic terms:
<https://standards.iteh.ai/catalog/standards/sist/72ca1d98-d659-40d8-9dcb-9d559382334/iec-60688-2021>

- "the nominal value", which may have a positive or a negative sign or both;
- "the span", which is the range of values of the output signal from maximum positive to maximum negative, if appropriate.

ELECTRICAL MEASURING TRANSDUCERS FOR CONVERTING AC AND DC ELECTRICAL QUANTITIES TO ANALOGUE OR DIGITAL SIGNALS

1 Scope

This document applies to transducers with electrical inputs and outputs for making measurements of AC or DC electrical quantities. The output signal can be in the form of an analogue direct current, an analog direct voltage or in digital form.

This document applies to measuring transducers used for converting electrical quantities such as

- current,
- voltage,
- active power,
- reactive power,
- power factor,
- phase angle,
- frequency,
- harmonics or total harmonic distortion, and
- apparent power

[IEC 60688:2021](#)

<https://standards.iteh.ai/catalog/standards/sist/72ca1d98-d659-40d8-9deb-9d559382334f/iec-60688-2021>

This document is not applicable for

- instrument transformers that comply with IEC 61869 (all parts),
- transmitters for use in industrial process application that comply with IEC 60770 (all parts), and
- performance measuring and monitoring devices (PMD) that comply with IEC 61557-12:2018.

Within the measuring range, the output signal is a function of the measurand. An auxiliary supply can be needed.

This document applies

- a) if the nominal frequency of the input(s) lies between 0 Hz and 1 500 Hz,
- b) to the electrical measuring transducer if it is part of a system for the measurement of a non-electrical quantity, and if it otherwise falls within the scope of this document, and
- c) to transducers for use in a variety of applications such as telemetry and process control and in one of a number of defined environments.

This document is intended:

- to specify the terminology and definitions relating to transducers whose main application is in industry,
- to unify the test methods used in evaluating transducer performance, and
- to specify accuracy limits and output values for transducers.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purpose of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1 General terms

3.1.1 electrical measuring transducer transducer TRD

device for converting an AC or DC measurand to a direct or alternating current, a direct or alternating voltage or a digital signal for measurement purposes
