About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications, symboles graphiques et le glossaire. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 500 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 25 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

DATA CONTAINER FORMAT FOR WEARABLE SENSOR

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 63430 has been prepared by Technical Area 18: Multimedia home systems and applications for end-user networks, of IEC Technical Committee 100: Audio, video and multimedia systems and equipment. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
100/4141/CDV	100/4178/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

INTRODUCTION

The target audience for this document includes the following stakeholders who have an interest in the systems and services using wearable devices:

- Consumer electronics (CE) and Information Communications Technology (ICT) device manufacturers.
- System integrators who want to utilize wearable device and technologies.
- Service operators who are interested in the IoT and multimedia systems and services.
- Stakeholders who want to understand the technologies and requirements for wireless connectivity between wearable sensor nodes and hub coordinator.

DATA CONTAINER FORMAT FOR WEARABLE SENSOR

1 Scope

This International Standard specifies a Container format for sensing data and its system requirements. This document applies to edge computing devices such as smartphones, home gateways, multimedia coordinators, etc., and cloud systems.

This document describes the following technical specifications:

- Container format for wearable sensor data,
- Schema Repository that defines the parameters and syntax of sensor data,
- Communication and system requirements between the edge computing device and Schema Repository.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1

Container

data structure that encapsulates one or multiple numbers of digital data

Note 1 to entry: Each piece of digital data consists of various kinds of data such as sensor signals, audio signals, video signals, metadata, programs, etc.

3.2

Schema Information

structural information that represents the data structure of a Container payload

3.3

Schema Repository

server that stores Schema Information

4 Abbreviated terms

BAN	Body area network
CRC	Cyclic redundancy check
DoS	Denial of Service
FEC	Forward error correction
GTIN	Global trade item number
IANA	Internet assigned numbers authority
ID	Identifier
IoT	Internet of Things
MAC	Medium access control
RS	Reed Solomon
UUID	Universal unique identifier

5 System structure

5.1 System overview

Sensing data detected by wearable sensors (e.g. vital sensors, environmental sensors, etc.) is transmitted from wearable sensors to edge computing devices (e.g. wearable signal aggregators, smartphones, etc.) through BAN (e.g. SmartBAN [1]¹,[2]), Bluetooth®² [3] and other short range communications. Figure 1 shows a diagram in which (1) SmartBAN hub and (2) Bluetooth® client are installed in one (3) edge computing device for convenience. In reality, either (1) SmartBAN or (2) Bluetooth® client may be installed. The sensing data collected by either wireless method is encapsulated into a Container as a function of the (3) edge computing device. Then, the Container is transferred to an (4) IoT platform located in a cloud. When formatting the data collected by (1) SmartBAN hub or (2) Bluetooth® client into a Container in (3) edge computing device, the edge computing device can obtain the header configuration and payload information on how to encapsulate the sensing data into the Container from (5) Schema Repository if the edge computing device does not have any pre-set header configuration nor payload information for the above-mentioned wearable sensors.

¹ Unless otherwise specified in the text of this document, the numbers in square brackets refer to the Bibliography.

² Bluetooth is the trademark of a product supplied by Bluetooth SIG, Inc. This information is given for the convenience of users of this document and does not constitute an endorsement by IEC of the product named. Equivalent products may be used if they can be shown to lead to the same results.

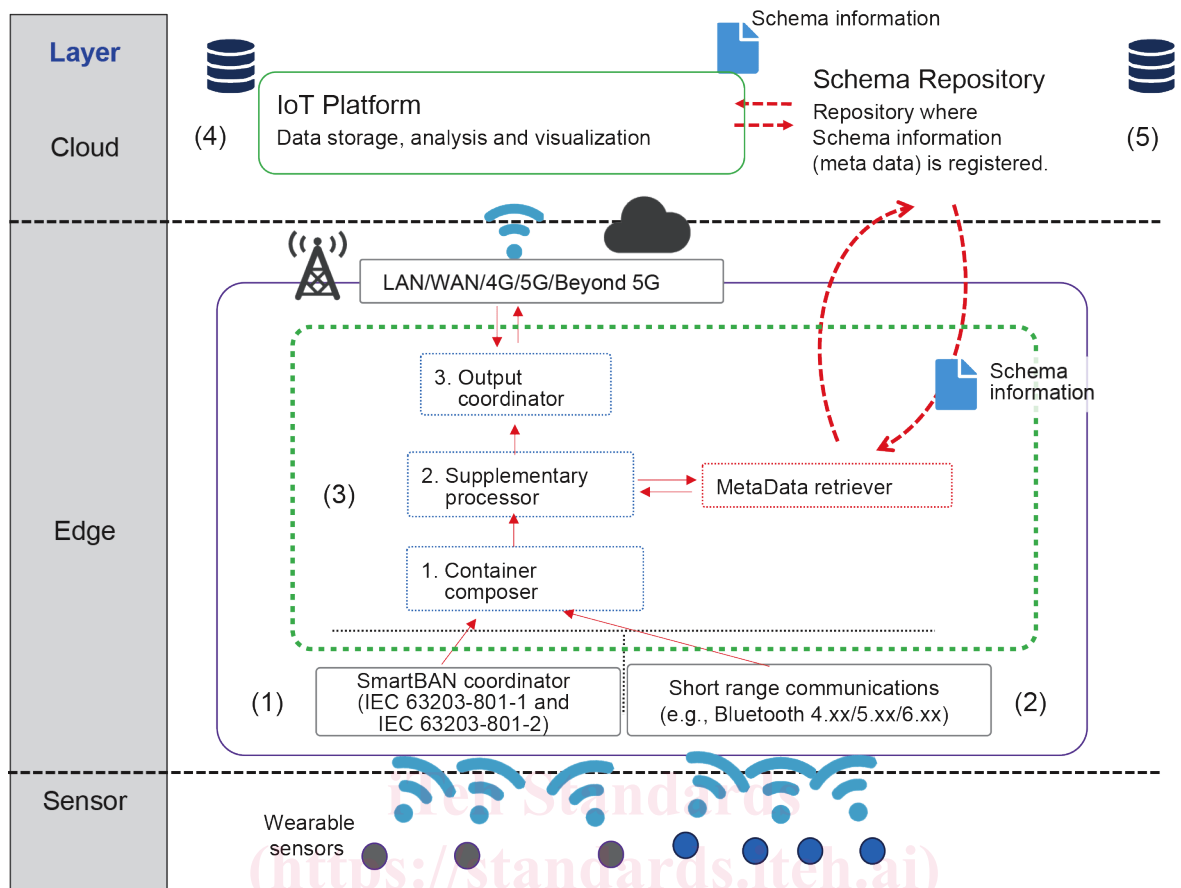

Figure 1 – System overview

5.2 Composition of Container format in edge computing device

5.2.1 General description

Figure 2 illustrates the composition of the Container format in an edge computing device.

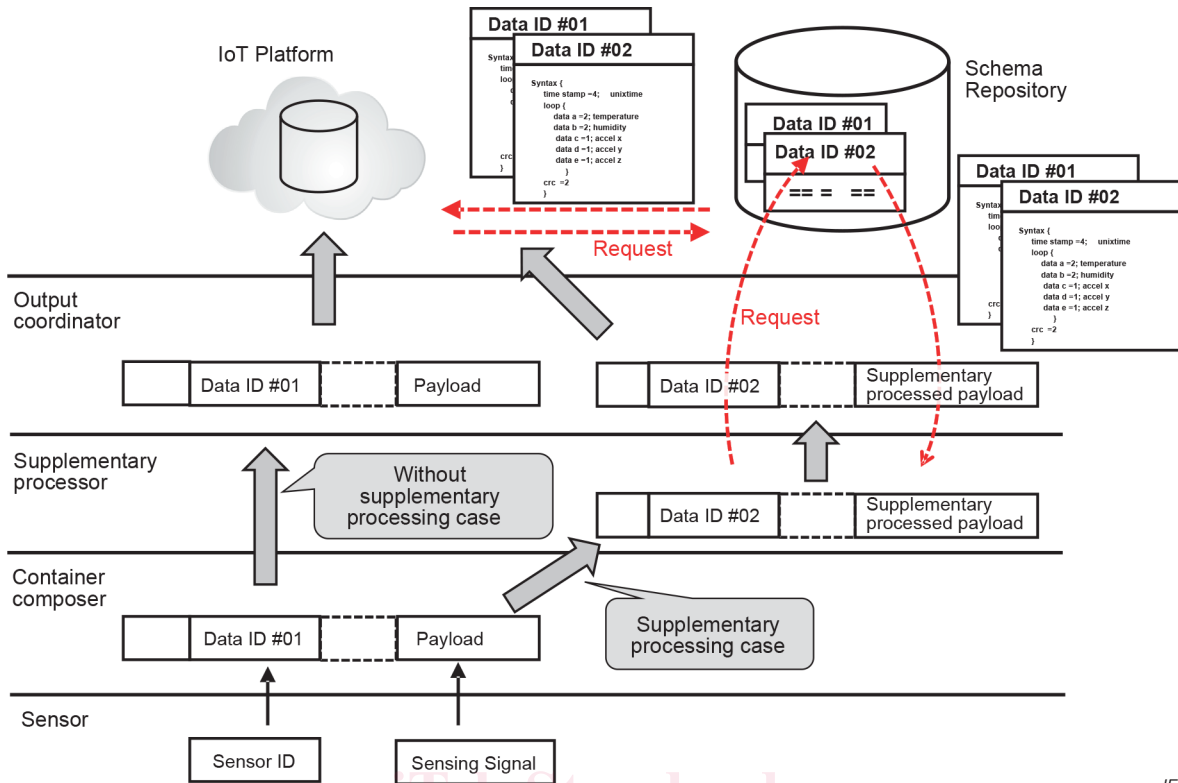

Figure 2 – Composition of Container format

5.2.2 Container composer

The Container composer encapsulates the sensor data received from the sensor device into a Container as a payload and outputs it. When the Container composer receives the sensor data, the Container composer adds the attribute information to the received sensor data to form a Container.

5.2.3 Supplementary processor

The Supplementary processor performs calculations and processing on the Container output from the Container composer. For example, the Supplementary processor can take a Container as an input and can output the result of performing an operation on the header and payload included in the Container as a new Container. Another example is that the Supplementary processor may calculate an average value or a maximum value of sensor data to respond to query operations. Further, the Supplementary processor may apply a window function or a filter based on the time or the number of data to the sensor data, and periodically aggregate the sensor data.

The Schema Repository stores and provides information necessary for interpreting Container data. The Schema Repository stores several units of Schema Information containing an attribute type for the header parameter and data type and sequence order described in the payload. The Schema Information is stored in a local file or in a location on the network that can be referenced by the Supplementary processor.

Upon receiving the input of the Container, the Supplementary processor divides the input Container data into a header area and a payload area. Subsequently, the Supplementary processor retrieves the Schema Information from the Schema Repository and applies the example given in this Subclause 5.2.3 on the supplementary processing on the Attribute Value stored in the header area and the value stored in the payload area.

5.2.4 Output coordinator

The Output coordinator receives the Container generated by Container composer or the Container to which the operation by Supplementary processor is applied. The Output coordinator stores the received Container and encapsulates it into a communication format suitable for the output destination (e.g. TCP), and then outputs it to the subsequent computational resources.

6 Container format

6.1 General description

The Container shall be formed by concatenation of a Container Header and a Container Payload as shown in Figure 3. The Container shall consist of a L_{hd} Byte header and L_{pl} Byte payload. The Length of payload shall be longer than or equal to zero Byte. In this Clause 6, big endian is applied for describing data.

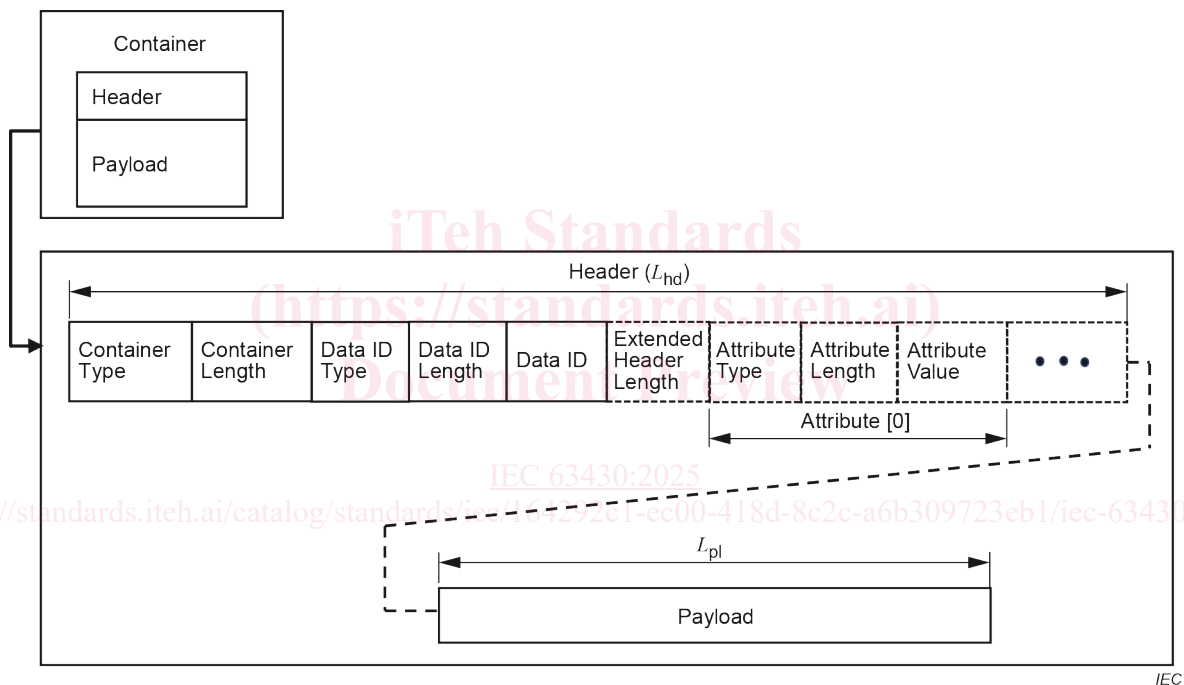

Figure 3 – Container structure

6.2 Header format

6.2.1 Structure of Header format

Figure 4 illustrates the Header format for a Container. The common part of Container Header shall consist of:

- a Container Type field,
- a Container Length field,
- a Data ID Type field,
- a Data ID Length field and
- a Data ID field.

The extended part of Container Header shall consist of:

- an Extended Header Length field and
- one or many numbers of Attribute Type fields, Attribute Length fields and Attribute Value fields.

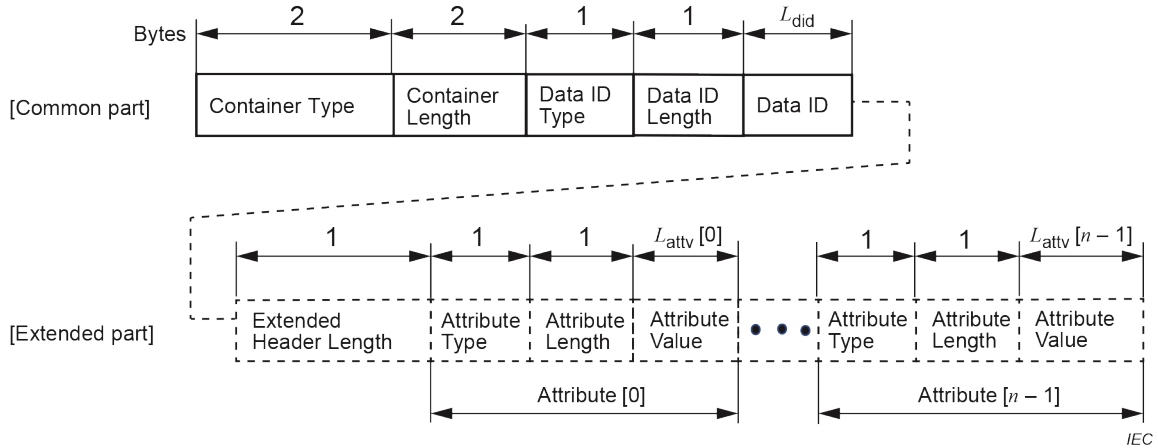

Figure 4 – Header format for bit stream type of Container

6.2.2 Container Type

The 2 Byte Container Type field shall set one of the values in Table 1.

The Container Type field shall be set at one of the following: '0101010101010101', '0011001100110011', '0110011001100110' or '0000111100001111' when the Container is composed for streaming process. The Container Type field shall be set at one of the following: '1010101010101010', '1100110011001100', '1001100110011001' or '1111000011110000' when the Container is composed for non-streaming process, including storage.

<https://standards.iteh.ai/catalog/standards/iec/164292c1-ec00-418d-8c2c-a6b309723eb1/iec-63430-2025>

Table 1 – Container Type

Streaming/Non-streaming	Extended Attributes (Yes/None)	Unfragmented payload / End of fragmented payload	First / Middle of fragmented payload
Streaming process	None	0101010101010101	0011001100110011
	Yes	0110011001100110	0000111100001111
Non-streaming process	None	1010101010101010	1100110011001100
	Yes	1001100110011001	1111000011110000

6.2.3 Container Length

The 2 Byte Container Length field shall indicate the Length of the entire Container from the beginning of Container Type to the end of payload in bytes.
