About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

INTERNATIONAL ELECTROTECHNICAL COMMISSION

COMBINED FLEXIBLE MATERIALS FOR ELECTRICAL INSULATION –**Part 1: Definitions and general requirements**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60626-1 has been prepared by IEC technical committee 15: Solid electrical insulating materials. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2009. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) the materials available for use within this series of standards have been updated;
- b) a framework has been created to allow test methods beyond those used for quality control specifications to allow for testing for qualification purposes.

The text of this International Standard is based on the following documents:

Draft	Report on voting
15/1009/FDIS	15/1016/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 60626 series, published under the general title *Combined flexible materials for electrical insulation*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

[IEC 60626-1:2023](https://standards.iteh.ai/catalog/standards/sist/6213269a-eafe-470f-96cf-d033ffd9c786/iec-60626-1-2023)

<https://standards.iteh.ai/catalog/standards/sist/6213269a-eafe-470f-96cf-d033ffd9c786/iec-60626-1-2023>

INTRODUCTION

This document is one of a series which deals with combined flexible materials consisting of two or more different insulating materials laminated together. The components of the combined materials are plastic films and/or fibrous materials such as papers, woven or non-woven fabrics, impregnated or not impregnated. This document does not include mica papers used as primary component, which are covered by the IEC 60371 series, but insulation materials based on mica can be used as component of a combined flexible material.

This series consist of three parts describing:

Part 1: Definitions and general requirements (IEC 60626-1);

Part 2: Methods of test (IEC 60626-2);

Part 3: Specifications for individual materials (IEC 60626-3).

COMBINED FLEXIBLE MATERIALS FOR ELECTRICAL INSULATION –

Part 1: Definitions and general requirements

1 Scope

This part of IEC 60626 contains the definitions related to and the general requirements to be fulfilled by combined flexible materials for electrical insulation. This document does not include mica papers used as a primary component, which are covered by the IEC 60371 series, but insulation materials based on mica paper can be used as component of a combined flexible material. Materials which conform to this specification meet established levels of performance. However, the selection of material by a user for a specific application is based on the actual requirements necessary for adequate performance in that application and not based on this specification alone.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60371-3-2, *Insulating materials based on mica – Part 3: Specifications for individual materials – Sheet 2: Mica paper*

IEC 60371-3-4, *Specification for insulating materials based on mica – Part 3: Specifications for individual materials – Sheet 4: Polyester film-backed mica paper with B-stage epoxy resin binder*

IEC 60371-3-5, *Insulating materials based on mica – Part 3: Specifications for individual materials – Sheet 5: Glass-backed mica paper with and epoxy resin binder for post-impregnation (VPI)*

IEC 60371-3-6, *Specification for insulating materials based on mica – Part 3: Specifications for individual materials – Sheet 6: Glass-backed mica paper with B-stage epoxy resin binder*

IEC 60554-3-1, *Specification for cellulosic papers for electrical purposes – Part 3-1: Specifications for individual materials – General purpose electrical paper*

IEC 60626-3, *Combined flexible materials for electrical insulation – Part 3: Specifications for individual materials*

IEC 60641-3-2:2007, *Pressboard and presspaper for electrical purposes – Part 3: Specifications for individual materials – Sheet 2: Requirements for presspaper types P.2.1, P4.1, P4.2, P4.3 and P6.1*

IEC 60674-3-2, *Specification for plastic films for electrical purposes – Part 3: Specifications for individual materials – Sheet 2: Requirements for balanced biaxially oriented Polyethylene Terephthalate (PET) films used for electrical insulation*

IEC 60674-3-4, *Plastic films for electrical purposes – Part 3: Specifications for individual materials – Sheets 4: Polyimide films used for electrical insulation*

IEC 60674-3-8, *Plastic films for electrical purposes – Part 3: Specifications for individual materials – Sheet 8: Balanced biaxially oriented polyethylene naphthalate (PEN) films used for electrical insulation*

IEC 60819-3-1, *Non-cellulosic papers for electrical purposes – Part 3: Specifications for individual materials – Sheet 1: Filled glass paper*

IEC 60819-3-2, *Non-cellulosic papers for electrical purposes – Part 3: Specifications for individual materials – Sheet 2: Hybrid inorganic- organic paper*

IEC 60819-3-3, *Non-cellulosic papers for electrical purposes – Part 3: Specifications for individual materials – Sheet 3: Unfilled aramid (aromatic polyamide) papers*

IEC 60819-3-4:2011, *Non-cellulosic papers for electrical purposes – Part 3: Specifications for individual materials – Sheet 4: Aramid fibre paper containing not more than 50 % of mica particles*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1

full width material

material of production width, for example about 1 m, as ordered

3.2

slit material

tape

material cut from full width material

3.3

duplex material

laminate consisting of two layers of insulating materials

3.4

triplex material

laminate consisting of three layers of insulating materials

3.5

quadruplex material

laminate consisting of four layers of insulating materials

4 Designations

4.1 Designation – Product

Particular types of combined flexible insulating materials can be designated by using the relevant combinations of code letters for the form and nature of the main components, separated by a hyphen.

EXAMPLES: F - PI,
C - G.

The more commonly used materials are listed in Table 1, with their corresponding specifications that shall be used when available. Other combinations of combined flexible materials for use as electrical insulation are possible.

Specific characteristics of a particular combined material (duplex, triplex or quadraplex), particular characteristics of the basic material, impregnating material, bonding agent, etc.) are described by additional data following the designation in Table 1.

Example for designation:

P-C/F-PET, is a layer of paper consisting of cellulose, laminated with a film consisting of polyethylene terephthalate.

In some cases, the identification of specific characteristics such as the following can be useful:

- | | |
|-----------------------|-----------------------|
| – Absorbent - porous | Calendered type |
| – Lengthwise oriented | Lengthwise reinforced |
| – Creped | Embossed |
| – Varnished | Impregnated |

NOTE This list is for guidance only and is not limiting. Code designations are in accordance with ISO standards such as ISO 1043-1.

Detailed specifics regarding commonly used combined flexible materials are provided in IEC 60626-3. For these constructions, the following nomenclature shall be used:

IEC 60626-3, sheet number, layer descriptions, total thickness

For example, from Sheet 112, the following is a description of one such product:

IEC 60626-3, Sheet 112, P-C/F-PET/P-C, 0,15 mm

For constructions for which there is no detail provided in IEC 60626-3, the following nomenclature shall be used:

IEC 60626-1, layer descriptions, thickness (micrometers) or grammage (g/m^2) of each layer. For simplicity, the micrometers will be represented by μ and the g/m^2 will be represented by g.

For example, for a combined flexible material using aramid paper and polyethylene naphthalate film in a triplex construction would be listed as:

IEC 60626-1, P-PAa/F-PEN/P-PAa, 50 μ /80 μ /50 μ

For constructions with added functional coatings, the following nomenclature shall be used:

IEC 60626-1, layer descriptions including coatings, thickness (micrometers) or grammage (g/m^2) of each layer. For simplicity, the micrometers will be represented by μ and the g/m^2 will be represented by g.

IEC 60626-1, FC-B-UP/P-PET/F-PET/P-PET/FC-B-UP, 10g/50 μ /80 μ /50 μ /10g

In this example, there is a material sheet 502 in IEC 60626-3 for the uncoated combined flexible material, but since this construction is more detailed, this naming nomenclature shall be used.

Table 1 – Commonly used flexible materials

Form of component	Code designation	Nature of the component	Code designation	IEC normative reference
Film	F	Polyethylene terephthalate	PET	60674-3-2
		Polyethylene naphthalate	PEN	60674-3-8
		Polyimide	PI	60674-3-4
		Polyether Ether Ketone	PEEK	n. a.
		Polyphenylene Sulfide	PPS	n. a.
Paper and non-woven fabric and mats	P	Cellulose paper	C	60554-3; 60641-3-2
		Aramid paper (Aromatic Polyamide)	PAa	60819-3-3
		Aramid fibre/mica paper	PAa-Mi	60819-3-4
		Polyethylene terephthalate non woven	PET	n. a.
		Filled glass paper	FG	60819-3-1
		Hybrid inorganic/organic paper	H	60819-3-2
		Mica paper, reinforced mica paper	Mi	60371-3-2
		Materials based on mica and epoxy	MIEP	60371-3-4; 60371-3-5; 60371-3-6
Woven fabrics	C	Cellulose	C	n. a.
		Glass	G	n. a.
		Polyethylene terephthalate	PET	n. a.
Adhesive	A	Thermoplastic	Tp	n. a.
		Thermosetting	Ts	n. a.
Coating	FC	B-Staged epoxy	B-EP	n. a.
		B-Staged unsaturated polyester	B-UP	n. a.
		C-Staged functional coatings	C- ^a	n. a.
The list of normative references is extensive because, in order to obtain a combination of two or more materials for electrical insulation, it is necessary that those base materials (paper, film, etc) shall conform to the requirements set forth, in the appropriate specification of the base material alone, for that purpose. This rule shall be applied also in the development of new possible combinations; to this end, specifications of materials not actually used, but referenced, can be eligible for future developments.				
NOTE n. a. = not available				
^a These coatings can be any polymer such as epoxy, unsaturated polyester, silicone, fluoropolymer, etc. Designations for these coatings are provided in ISO 1043-1.
