**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)**

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

<https://standards.iteh.ai/catalog/standards/iec/6d73d3e2-fe08-4094-87e7-010a43618936/iec-62977-2-7-2024>

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTRONIC DISPLAYS –****Part 2-7: Measurements of optical characteristics – Tiled displays**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62977-2-7 has been prepared by IEC technical committee 110: Electronic displays. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
110/1614/FDIS	110/1631/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts in the IEC 62977 series, published under the general title *Electronic displays*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Tiled displays are widely used in a variety of places and in a variety of forms. Demand for tiled displays is expected to increase in the future. IEC TC 110 has already standardized various measurement methods to evaluate performance of electronic displays. However, in order to evaluate the performance of a tiled display, additional definitions of terms and new evaluation methods will be developed.

The tiled display has repeatable elements that exist at various levels whose subsystems enable a highly configurable display system. In terms used in LED industries, for example the display system (first level of assembly) includes all subcomponents. It can come in any shape or size, curved, disconnected, etc. The cabinet (second level of assembly) typically includes a mechanical support structure with mechanical interconnects. The cabinet is also called a panel, chassis, or shell. The module (third level of assembly) typically includes optical elements (lowest level of assembly) with electrical interconnects, but will probably not have module-to-module mechanical interconnects. The module is also called a tile. As described above, the tiled display consists of a combination of subsystems of each level as illustrated in Figure 1. In this combination process, problems that did not appear on a single panel display can occur. Therefore, the optical properties caused by this problem will be checked at each level.

a) Display system

b) Cabinet

c) Module

[IEC 62977-2-7:2024](https://standards.iteh.ai/catalog/standards/iec/62977-2-7:2024)

IEC

<https://standards.iteh.ai/catalog/standards/iec/6d73d3e2-fe08-4094-87e7-010a43618936/iec-62977-2-7-2024>

**Figure 1 – Example of tiled display system**

Depending on the final installation location, the methods presented in this document will probably not be applicable, and the result can vary depending on the calibration process reflecting the final installation environment.

This document deals with a tiled display performance evaluation method based on the existing TC 110 measurement method.

## ELECTRONIC DISPLAYS –

### Part 2-7: Measurements of optical characteristics – Tiled displays

#### 1 Scope

This part of IEC 62977 specifies standard measuring conditions and measurement methods for determining the optical characteristics of tiled displays which consist of multiple display modules in order to form one screen. These methods apply to emissive and transmissive direct view flat displays that render real 2D images with all modules lying in the same plane. The methods are applicable in environments where the measuring conditions can be controlled, such as laboratory and production testing.

NOTE The measurement results are not specific values for the products. They can vary according to the measurement method and light measuring device (LMD) used in the calibration.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62977-2-1:2021, *Electronic displays – Part 2-1: Measurements of optical characteristics – Fundamental measurements*

IEC 62977-2-2:2020, *Electronic displays – Part 2-2: Measurements of optical characteristics – Ambient performance*

<https://standards.iteh.ai/catalog/standards/iec/6d73d3e2-fe08-4094-87e7-010a43618936/iec-62977-2-7-2024>

IEC 62341-6-2:2015, *Organic light emitting diode (OLED) displays – Part 6-2: Measuring methods of visual quality and ambient performance*

#### 3 Terms, definitions, and abbreviated terms

##### 3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

##### 3.1.1

##### **tiled display**

display which consists of multiple display modules in order to form one screen

**3.1.2****seam**

space or gap between the adjacent display device modules

Note 1 to entry: Seam can result from the gaps between adjacent pixels on adjacent devices, and from any components (e.g., interconnects, adhesives, seals, mechanical alignment components, etc.) of a frame outside the device, making the display image discontinuous.

Note 2 to entry: In the case of some tiled display products, additional lens, narrow pitch, and overlapping technologies are used to produce a seamless display with a seam that is not perceptible to the user. Such a seam is called an invisible seam.

**3.1.3****tiled display element**

single device element of the tiled display that can be driven independently and capable of providing an independent visual representation

Note 1 to entry: Among the assembly levels exemplified in the introduction, cabinets and modules would belong to tiled display elements. However, the case of the module, which cannot be operated independently, is excluded.

**3.1.4****pixel ratio**

number of pixels of the output image of the LMD per pixel interval of the image of the display input, when the display screen is captured by the LMD at a specific magnification

**3.2 Abbreviated terms**

CIE Commission Internationale de l'Éclairage (International Commission on Illumination)

CPX camera pixel

DUT device under test

ILMD imaging light measuring device

LMD light measuring device

MWA moving-window average

**4 Standard measuring equipment****4.1 Light measuring devices**

For the requirements of light measuring devices, refer to those specified in IEC 62977-2-1. The system configurations, operating conditions, or both, of the measuring equipment shall comply with the structure specified in each item. In particular, 6.2 and 6.3 shall follow the conditions of IEC 62977-2-1:2021, 5.3.4.

For 2D ILMDs which are not covered by 62977-2-1, the following requirements apply to the light measuring equipment, as follows.

2D ILMD: The ILMD shall capture a displayed image at a certain exposure time. The ILMD shall be used within its linear range for the incoming light. If a 2D ILMD is used, the effect of moiré, LMD field of view, flat field correction, background subtraction, etc., shall be taken into account. The measurement method in this document only measures a small area of the display, not the entire display, so moiré is not likely to occur, but should be checked before measurement. One display pixel should be covered by 30 or more camera pixels to avoid it. Refer to [1]<sup>1</sup>, Chapter 7, Appendix A9, for more information.

<sup>1</sup> Numbers in square brackets refer to the Bibliography.
