

Designation: D8270 – 20

Standard Terminology Relating to Cannabis¹

This standard is issued under the fixed designation D8270; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This terminology is a compilation of definitions of technical terms used in the cannabis industry. Terms that are generally understood or adequately defined in other readily available sources are not included.

1.2 When a term is used in an ASTM document for which Committee D37 is responsible it is included only when judged, after review by Subcommittee D37.91, to be a generally usable term.

1.3 Definitions that are identical to those published by other ASTM committees or other standards organizations are identified with the committee number (for example, D20) or with the abbreviation of the name of the organization (for example, IUPAC, International Union of Pure and Applied Chemistry).

1.4 A definition is a single sentence with additional information included in discussions.

1.5 Definitions are followed by the committee responsible for the standard(s) (for example, [D37.01]) and standard designator(s) in which they are used (for example, D8219).

1.6 Abbreviated Terminology:

1.6.1 Abbreviated terminology is intended to provide uniform contractions of terms relating to cannabis that have evolved through widespread common usage. The compilation in this standard has been prepared to avoid the occurrence of more than one abbreviated term for a given cannabis term and to avoid multiple meanings for abbreviated terms.

1.6.2 The abbreviated terminology and descriptions in this standard are intended to be consistent with usage in the cannabis industry and the standards under D37 jurisdiction. Other ASTM committees may assign a different word-phrase description to the same abbreviated terminology. In such cases, the abbreviated terms in this standard shall apply to usage in D37 standards, or if widespread misunderstanding could result from conflicting abbreviated terminology descriptions, the abbreviated terminology for the word-phrase shall not be used in D37 standards.

¹ This terminology is under the jurisdiction of ASTM Committee D37 on Cannabis and is the direct responsibility of Subcommittee D37.91 on Terminology. Current edition approved Feb. 15, 2020. Published March 2020. DOI: 10.1520/D8270-20.

1.6.3 *Acronyms and Initialisms*—A word formed from the letters or parts of words of a longer word-phrase, usually from the initial letters or parts of the words. An acronym is pronounced as a word (for example, radar for radio detection and ranging). An initialism is pronounced as a series of letters (for example, DOT for Department of Transportation).

1.6.4 The acronym or initialism description is the origin word-phrase for the acronym or initialism, not a definition.

1.7 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.8 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

2.1 ASTM Standards:²

- D7338 Guide for Assessment Of Fungal Growth in Buildings
- E2614 Guide for Evaluation of Cleanroom Disinfectants
- F3127 Guide for Validating Cleaning Processes Used During the Manufacture of Medical Devices

3. Terminology

batch, *n*—a defined quantity of product accumulated under conditions considered uniform for sampling purposes.

batch number, *n*—a group of letters, numbers, or symbols, or any combination thereof, from which the history of the manufacturing, packaging, labeling, or holding of a product or derived product can be determined.

DISCUSSION—The terms batch number, lot number, or control number refer to the manufactured/produced unit identified.

bioactive, *adj*—having an effect upon a living organism, tissue, or cell.

² For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

biosecurity, *n*—preventative measures designed to protect crops and property from the entry and spread of pests and diseases.

cannabinoid(s), *n*—a class of chemical compounds produced by the cannabis plant.

DISCUSSION—Cannabinoids are synonymous with “phytocannabinoids” when referring to the cannabinoids produced by the cannabis plant. “Endocannabinoids” refer to those cannabinoids produced by normal human/animal physiological functions.

cannabis, *n*—a genus of flowering plants within the Cannabaceae family identified by their distinctive glandular trichomes, divided serrated leaves and tough bast fibers.

DISCUSSION—Cannabis is derived from the homogeneous cultivars of the plant *Cannabis sativa* L. (Family Cannabaceae) and its subspecies, varieties, and chemotypes.

cannabis, medical, *n*—cannabis and cannabinoid materials that are produced and used for medicinal purposes in accordance with applicable regulatory standards.

cannabis, oil, *n*—concentrated liquid extracts from the cannabis plant.

DISCUSSION—The term Cannabis oil or CBD “oil” is commonly used to refer to a product or ingredient that actually consists of a concentrated extract of cannabis material (liquid or otherwise) dissolved in some type of fixed oil, such as olive or coconut. There are two types of traditional Cannabis oil; fixed oil pressed from the seed and volatile or essential oil from the glandular trichomes.

cleaning, *v*—physical removal of dirt, debris, and other potential contaminants to the extent necessary for further processing or intended use.

component, *n*—a substance or item intended for use in the manufacture of a product including ingredients, additives, fillers, other ingredients, and processing aids.

composition, *n*—the aggregate mixture which results from the manufacture of a product according to the formula and process defined in the product’s manufacturing protocol.

contact surface, *n*—any boundary region that directly touches cannabis, components, or cannabis-derived product, and any boundary region from which drainage onto cannabis, components, or cannabis-derived product, or onto other regions that touch cannabis, components, or cannabis-derived product, which may occur during the normal course of operations.

contact time, *n*—predetermined time that a test microorganism is exposed to the activity of a test material.

contaminant, *n*—any material that potentially has adverse impacts on the functioning of, and/or shows an undesirable interaction.

F3127

DISCUSSION—A contaminant may be a single component or any combination of components. Examples of possible types of contaminants includes biological or non-biological in nature; living or dead; particles or thin films; solid, liquid, or gas; organic or inorganic.

controlled access area, *n*—an area in the physical plant, dispensary, or location, designed to prevent entry by anyone except authorized personnel.

cultivar, *n*—a plant variety that has been produced in cultivation by selective breeding.

cultivar, commercial (cannabis), *n*—*cannabis* that is grown for the purposes of fiber, textiles, biofuels, bio/phytoremediation or any other purposes not intended for human and/or animal consumption.

cultivar, multi-purpose (cannabis), *n*—*cannabis* that is grown for multiple end uses whether that be for a combination of drug, nutritional and/or commercial purposes.

cultivar, nutritional (cannabis), *n*—*cannabis* that is grown for the purposes of seed production or any other purposes intended for human and/or animal consumption except for the purposes of collecting, isolating or extracting the essential oils, resins, saps, glandular trichomes, and flower(s).

cultivar, resin (cannabis), *n*—*cannabis* that is grown for the purposes of collecting, isolating or extracting the essential oils, resins, saps, glandular trichomes, or flower(s) intended for human and/or animal use.

cultivate, *v*—to grow, harvest, dry, and cure agricultural products.

cultivation operation, *n*—a facility where agricultural products are grown.

cultivator, *n*—a person, group of persons, non-profit entity, or business entity that grows drug, nutritional and/or commercial products.

decontamination, *n*—the use of physical or chemical means to remove, inactivate or destroy microorganisms on a surface or item so there are no infectious organisms and the surface or item is rendered safe for handling, use or disposal.

disinfectant, *n*—a physical or chemical agent or process that destroys pathogenic or potentially pathogenic microorganisms on inanimate surfaces or objects.

dispense, *v*—to provide cannabis or cannabis-derived product to compliant individuals and/or entities.

dispensing operation, *n*—a person, group of persons, non-profit entity, or business entity that provides cannabis or cannabis-derived product to individuals or other entities.

DISCUSSION—A dispensing operation may include delivery services, direct-from-garden operations, growing co-ops, and storefront operations.

disposition, *n*—review and approval or rejection of a batch, lot, or other item by quality control personnel.

drug, *n*—(A) articles recognized in the official United States Pharmacopoeia, official Homoeopathic Pharmacopoeia of the United States, or official National Formulary, or any supplement to any of them; and (B) articles intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease in man or other animals; and (C) articles (other than food) intended to affect the structure or any function of the body of man or other animals; and (D) articles intended for use as a component of any article specified in clause (A), (B), or (C).
