

Designation: D7518 – 20

Standard Specification for 1,3 Propanediol (PDO) Base Engine Coolant for Automobile and Light-Duty Service¹

This standard is issued under the fixed designation D7518; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This specification covers the requirements for 1,3 propanediol base engine coolants used in automobiles or other light-duty service cooling systems. When concentrates are used at 40 % to 70 % concentration by volume in water, or when prediluted glycol base engine coolants (50 volume % minimum) are used without further dilution, they will function effectively to provide protection against freezing, boiling, and corrosion.

1.2 The coolants governed by this specification are categorized as follows:

Coolant Type	Description
I	1,3 Propanediol base concentrate
II	1,3 Propanediol predilute (50 vol %)

NOTE 1—This specification is based on the knowledge of the performance of engine coolants prepared from new or virgin ingredients.

NOTE 2—This specification applies to automobiles and light-duty service. A specification for heavy-duty engine service is under development.

1.3 The values stated in SI units are to be regarded as standard. The values given in parentheses after SI units are provided for information only and are not considered standard.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.5 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

¹ This specification is under the jurisdiction of ASTM Committee D15 on Engine Coolants and Related Fluids and is the direct responsibility of Subcommittee D15.07 on Specifications.

Current edition approved April 1, 2020. Published April 2020. Originally approved in 2009. Last previous edition approved in 2015 as D7518–10(2015)^ε. DOI: 10.1520/D7518–20.

3. Terminology

3.1 Definitions:

3.1.1 PDO base engine coolant, *n*—an engine coolant in which the freeze point depressant is 1,3 propylene, with inhibitors to minimize foaming and corrosion.

3.1.2 For definitions of other terms used in this specification, refer to Terminology D4725.

4. General Requirements

4.1 Engine coolant concentrates or prediluted PDO base engine coolants shall be formulated with 1,3 propanediol meeting Specification D7388, water, and suitable corrosion inhibitors, dye, and a foam suppressor.

4.2 PDO base engine coolant concentrates (Type I) and prediluted (Type II) may not contain ethylene glycol, diethylene glycol, triethylene glycol, or tetraethylene glycol, or combinations thereof, in amounts exceeding the limits set in Specification D7388.

4.3 All engine coolant concentrates or prediluted PDO base engine coolants shall conform to the general requirements given in Table 1.

4.4 Prediluted PDO (Type II) base engine coolants shall be formulated using water that meets the following requirements:

Property	Specific Values	ASTM Test Method
Chlorides, µg/g (ppm)	25 max	D512, D4327, D5827
Sulfate, µg/g (ppm)	50 max	D516, D4327, D5827
Hardness, as CaCO ₃ , µg/g (ppm)	20 max	D1126, D6130
pH	5.5 to 8.5	D1287, D1293
Iron, µg/g (ppm)	1.0 max	D6130, E394

TABLE 1 General Requirements

Property	Specific Values	ASTM Test Method
Color	Distinctive	...
Effect on nonmetals	No adverse effect	under consideration

NOTE 3—Prediluted coolants are intended for direct addition to an engine-cooling system with no further dilution. However, if circumstances require addition and prediluted aqueous engine coolant is not available, use the appropriate engine-coolant concentrate (Type I) diluted to 50 volume % with water of at least the quality outlined in Table X1.1.

4.5 When diluting engine-coolant concentrates for actual service, the water should be of such quality that it does not contain excessive solids, hardness salts, or chlorides. In the absence of specific recommendations from the engine or vehicle manufacturers, see Appendix X1, or Table X1.1. If such water is not available, use deionized (demineralized) or distilled water. This procedure will minimize the formation of hard-water scale and avoid the introduction of mineral components, such as chlorides and sulfates, which can increase the corrosion rate of aluminum and iron.

4.6 When installed in accordance with the vehicle manufacturer’s recommendations and those on the product label, engine coolant concentrates or prediluted glycol-base engine coolants shall be suitable for use in a properly maintained cooling system (X1.1) in normal light-duty service for a minimum of one year without adversely affecting fluid flow and heat transfer.

5. Detailed Requirements

5.1 Glycol-base coolant concentrates and prediluted coolants shall conform to the physical and chemical requirements prescribed in Table 2 depending on coolant type (see 1.2).

5.2 The requirements listed in Table 2 for prediluted coolant (Type II) are prescribed for the coolant as packaged, without further dilution or adjustment.

5.3 All coolant concentrates and prediluted coolants shall conform to the performance requirements listed in Table 3.

5.4 Coolant concentrates shall be diluted for performance testing as described in the individual ASTM test methods.

5.5 If necessary, the freezing point of prediluted coolants shall be adjusted with deionized water before proceeding with performance testing. The freezing point of prediluted PDO base coolants (Type II) shall be –27.8 °C (–18.0 °F).

5.6 Adjusted, prediluted engine-coolant performance test solutions shall be prepared as described in Table 3, Footnotes B through F.

6. Keywords

6.1 1,3-propanediol; engine coolant; engine coolant concentrate; light-duty engine coolant; PDO; prediluted engine coolant
