

Designation: A732/A732M - 14 A732/A732M - 20

Standard Specification for Castings, Investment, Carbon and Low Alloy Low-Alloy Steel for General Application, and Cobalt Alloy for High Strength at Elevated Temperatures¹

This standard is issued under the fixed designation A732/A732M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope*

- 1.1 This specification covers carbon and low-alloy steel and cobalt alloy castings made by the investment casting process.
- 1.2 Fifteen grades of steel and two cobalt alloy grades are covered.
- 1.3 Supplementary requirements of an optional nature are provided for use at the option of the purchaser. The supplementary requirements shall apply only when specified individually by the purchaser in the purchase order or contract.
- 1.4 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.
- 1.5 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

2.1 ASTM Standards:²

A941 Terminology Relating to Steel, Stainless Steel, Related Alloys, and Ferroalloys

A957/A957M Specification for Investment Castings, Steel and Alloy, Common Requirements, for General Industrial Use

A997 Practice for Investment Castings, Surface Acceptance Standards, Visual Examination

E21 Test Methods for Elevated Temperature Tension Tests of Metallic Materials

E139 Test Methods for Conducting Creep, Creep-Rupture, and Stress-Rupture Tests of Metallic Materials

3. Ordering Information

- 3.1 Orders for castings under this specification should include the following information:
- 3.1.1 Quantity,
- 3.1.2 ASTM designation and issue date,
- 3.1.3 Grade designation (Tables 1 and 2), and
- 3.1.4 Description of casting by part, pattern, or drawing number. (Dimensional tolerances and machined surfaces shall be indicated on the casting drawing.) drawing.)
 - 3.2 The purchaser should specify any of the following information to describe adequately describe the desired material:
 - 3.2.1 Heat-treat condition (see 5.1 and 5.2),
 - 3.2.2 Repair welding (see Section 8 and Specification A957/A957M),
 - 3.2.3 Source inspection, if any (see Specification A957/A957M), and
 - 3.2.4 Supplementary requirements required (marking, certification, mechanical properties, NDT, and the like).

¹ This specification is under the jurisdiction of ASTM committee A01 on Steel, Stainless Steel and Related Alloys and is the direct responsibility of Subcommittee A01.18 on Castings.

Current edition approved March 1, 2014May 1, 2020. Published March 2014May 2020. Originally approved in 1976. Last previous edition approved in $\frac{20092014}{2014}$ as $\frac{2014}{2014}$ as $\frac{2014}{2014}$ as $\frac{2014}{2014}$ and $\frac{2014}{2014}$ as $\frac{2014}{2014}$

| Boron | 0.007 max | 0.005-0.015 |

4. General Requirements

4.1 Material furnished to this specification shall conform to the requirements of Specification A957/A957M, including any supplementary requirements that are indicated on the purchase order. Failure to comply with the requirements of Specification

^A Investment Casting (IC) numbers are to be used only for nomenclature comparison.

A957/A957M constitutes nonconformance with this specification. In case of conflict of this specification and Specification A957/A957M, this specification shall prevail.

5. Heat Treatment

- 5.1 Steel castings shall be heat treated either by full annealing, normalizing, normalizing and tempering, or quenching and tempering to obtain the specified properties or other properties that have been agreed upon within each grade. In this latter instance, Supplementary Requirement S53 shall be used.
 - 5.1.1 Heat treatment shall be performed after the castings have been allowed to cool below the transformation range.
 - 5.2 Cobalt alloy castings shall be supplied in the as-cast condition unless otherwise agreed upon by supplier and purchaser.
 - 5.3 Definitions of terms relating to heat treatment shall be in accordance with Terminology A941.

6. Chemical Composition

6.1 The castings shall conform to the requirements for chemical composition specified in Table 1 and 2-and Table 2.

7. Quality

- 7.1 The surface of the casting shall be examined visually to meet the requirements of Practice A997. Acceptance criteria to be mutually agreed upon between supplier and purchaser.
 - 7.2 The castings shall not be peened or plugged or impregnated.

8. Repair by Welding

- 8.1 Welding shall be accomplished with a filler metal that produces a weld deposit with a chemical composition similar to the casting. Castings ordered in the annealed condition or for subsequent hardening shall be annealed after weld repairs. Castings ordered heat treated shall be post weld post-weld heat treated in accordance with the qualified welding procedure after weld repairs, with the exception of Grades 1A and 2A, where post weld post-weld heat treatment is optional.
 - 8.2 Welds shall be subject to the same quality standards as used to inspect the castings.

9. Keywords

9.1 alloy steel; carbon steel; cobalt alloys; investment castings; steel castings

SUPPLEMENTARY REQUIREMENTS

The following supplementary requirements shall not apply unless specified in the purchase order. A list of standardized supplementary requirements for use at the option of the purchaser is included in Specification A957/A957M. Those ordinarily considered suitable for use with this specification are given below, together with additional supplementary requirements that are applicable only to this specification. Other supplementary requirements enumerated in Specification A957/A957M may be used with this specification upon agreement between supplier and purchaser.

- S1. Magnetic Particle Inspection
- S2. Radiographic Inspection
- S3. Liquid Penetrant Inspection
- S6. Certification
- S7. Prior Approval of Major Weld Repairs
- S8. Marking
- S10. Hardness Test
- S13. Unspecified Elements
- S16. Weld Repair Charts
- S18. Hot Isostatic Pressing (HIPing)
- S22. Decarburization

S53. Mechanical Properties

S53.1 Mechanical properties other than those specified in Table S54.1 may be ordered for each of the grades. The properties shall be agreed upon between the supplier and the purchaser.

TABLE S54.1 Tensile Requirements

| Grade — | Tensile strength, min | | Yield strength, min | | Elongation, in 2-in. [50-mm] 2 in. | Heat |

| 15A ₽ | | | | · | | A |
| 15A ^D | <u></u> | <u></u> | <u></u> | <u></u> | <u></u> | <u>A</u> |

^A Annealed.

^B Quenched and tempered.

C Normalized Normalized and tempered.
D Hardness Rockwell B, 100 max.

S54. Tension Test (Castings Heat Treated by Supplier)

S54.1 Tensile properties shall be determined from cast material representing each master heat or <u>sub heat. sub-heat.</u> The results shall conform to the requirements specified in Table S54.1, or to properties agreed upon, and shall be reported to the purchaser or his representative. See Specification A957/A957M for detailed testing requirements of master heats and <u>sub heats.sub-heats.</u>

S55. Tension Test (Castings Heat Treated by Purchaser)

S55.1 The supplier shall heat treat a tension specimen of cast material from the same master heat or <u>sub heat sub-heat</u> to determine whether the castings are capable of being heat treated to the specified properties. The results shall conform to the requirements specified in <u>Table S54.1</u>, or to properties agreed upon, and shall be reported to the purchaser or his representative. See Specification <u>A957/A957M</u> for detailed testing requirements of master heats and <u>sub heats.sub-heats</u>.

S56. High Temperature High-Temperature Tension Test

S56.1 High-temperature tension tests of cast material from the same master heat or <u>sub-heat sub-heat</u> shall be required when specified in the inquiry, contract, or order. When so specified, the properties obtained shall be reported to the purchaser or his representative and shall conform to the requirements prescribed in <u>Table S56.1</u>. The tension test shall be performed in accordance with Test Methods E21. See Specification A957/A957M for detailed testing requirements of master heats and <u>sub-heats.</u> <u>sub-heats.</u>

S57. Stress Rupture Test

S57.1 Stress rupture tests of cast material from the same master heat or <u>sub heat sub-heat</u> shall be required when specified in the inquiry, contract, or order. When so specified, the properties obtained shall be reported to the purchaser or his representative and shall conform to the requirements prescribed in Table S57.1. The stress rupture test shall be performed in accordance with <u>Practice Test Methods E139</u>. See Specification A957/A957M for detailed testing requirements of master heats and sub heats.sub-heats.
