Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 4762 was prepared by Technical Committee ISO/TC 2, *Fasteners*.

This second edition cancels and replaces the first edition (ISO 4762 : 1977), of which it constitutes a technical revision.

Hexagon socket head cap screws — Product grade A

iTeh STANDARD PREVIEW (standards.iteh.ai)

1 Scope

This International Standard specifies the characteristics of hexagon socket head cap screws with metric dimensions and nominal thread diameters, d , from 1,6 mm up to and including 36 mm, of product grade A.

If, in special cases, specifications other than those listed in this International Standard are required, they shall be selected from existing International Standards, for example ISO 261, ISO 888, ISO 898-1, ISO 965-2, ISO 3506 and ISO 4759-1.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 225 : 1983, *Fasteners — Bolts, screws and nuts — Symbols and designations of dimensions.*

ISO 261 : 1973, *ISO general purpose metric screw threads — General plan.*

ISO 888 : 1976, *Bolts, screw and studs — Nominal lengths, and thread lengths for general purpose bolts and screws.*

ISO 898-1 : 1988, *Mechanical properties of fasteners — Part 1: Bolts, screws and studs.*

ISO 965-2 : 1980, *ISO general purpose metric screw threads — Tolerances — Part 2: Limits of sizes for general purpose bolt and nut threads — Medium quality.*

ISO 3269 : 1984, *Fasteners — Acceptance inspection.*

ISO 3506 : 1979, *Corrosion-resistant stainless steel fasteners — Specifications.*

ISO 4042 : 1989, *Threaded components — Electroplated coatings.*

ISO 4753 : 1983, *Fasteners — Ends of parts with external metric ISO thread.*

ISO 4759-1 : 1978, *Tolerances for fasteners — Part 1: Bolts, screws and nuts with thread diameters between 1,6 (inclusive) and 150 mm (inclusive) and product grades A, B and C.*

ISO 6157-1 : 1988, *Fasteners — Surface discontinuities — Part 1: Bolts, screws and studs for general requirements.*

ISO 6157-3 : 1988, *Fasteners — Surface discontinuities — Part 3: Bolts, screws and studs for special requirements.*

ISO 8839 : 1986, *Mechanical properties of fasteners — Bolts, screws, studs and nuts made of non-ferrous metals.*

ISO 8992 : 1986, *Fasteners — General requirements for bolts, screws and nuts.*

3 Dimensions

NOTE — Symbols and designation of dimensions are specified in ISO 225.

Bottom edge of head may be radiused or chamfered to d_w but in every case must be deburred

Top edge of head may be radiused or chamfered as shown at the option of the manufacturer

Maximum underhead fillet

$$l_{fmax} = 1,7 r_{max}$$

$$r_{max} = \frac{d_{amax} - d_{smax}}{2}$$

r_{min} , see table 1

1) d_s applies to positive values of l_s .
 2) Incomplete thread $u < 2 P$

1) P = pitch of the thread.

2) For lengths below the thick dashed line.

3) For plain heads.

4) For knurled heads.

5) $e_{\min} = 1,14 s_{\min}$

6) For property class 12.9.

7) For all other property classes.

8) The range of commercial lengths is between the continuous thick lines. Lengths above the thick dashed line are threaded to the head within $3P$. Lengths below the thick dashed line have values of l_g and l_s in accordance with the following formulae:

$$l_{g\max} = l_{\text{nom}} - b$$

$$l_{s\min} = l_{g\max} - 5P$$
