**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)**

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**FIBRE OPTIC INTERCONNECTING DEVICES  
AND PASSIVE COMPONENTS –****Part 01: Fibre optic connector cleaning methods**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TR 62627-01 has been prepared by subcommittee 86B: Fibre optic interconnecting devices and passive components, of IEC technical committee 86: Fibre optics. It is a Technical Report.

This third edition cancels and replaces the second edition published in 2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) addition of cleaning tools for adhesive pad type and adhesive pen type in terms and definitions (Clause 3), in information (7.5 and 7.6), in fibre optic connectors and their applicable cleaning tools (Table 1 and Clause 8) and procedures (9.5, 9.6 and 9.7);
- b) addition of classification of cleaning tools and machines (Figure 1).

The text of this Technical Report is based on the following documents:

Draft	Report on voting
86B/4625/DTR	86B/4647/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts in the IEC 62627 series, published under the general title *Fibre optic interconnecting devices and passive components*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

# FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS –

## Part 01: Fibre optic connector cleaning methods

### 1 Scope

This part of IEC 62627, which is a Technical Report, details cleaning methods for fibre optic connectors. It includes typical cleaning tools and machines, and cleaning procedures. Other cleaning methods exist. The impact of contamination and the reasons for connector visual inspection and cleaning are described in Annex B. This document does not address the visual inspection procedures, which are covered in IEC 61300-3-35.

Optical fibre patch cords are handled by the operators and maintenance staff of optical network systems. This document is useful as a guideline to prepare instruction manuals for those involved in optical system maintenance and operation.

This document covers fibre optic connector plugs, optical adaptors, optical receptacles (excluding optical transceivers) and dust caps. Guidelines for fibre optic connector end-face cleaning methods for receptacle style optical transceivers are covered in IEC TR 62572-4.

### 2 Normative references

There are no normative references in this document.

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

#### 3.1 Cleaners

##### 3.1.1

##### **adhesive backed stick type cleaner**

cleaning tool for end-faces of fibre optic connector plugs, fibre optic connector receptacles and fibre optic connector adaptors using a soft adhesive backing at the end of a stick

##### 3.1.2

##### **adhesive pad type cleaner**

cleaning tool for end-faces of fibre optic connector plugs using a pad style with soft adhesive surface

##### 3.1.3

##### **adhesive pen type cleaner**

cleaning tool for end-faces of fibre optic connector plugs, fibre optic connector receptacles and fibre optic connector adaptors using a pen style with a soft adhesive tape at the top of the tool

**3.1.4****air duster****canned air**

cleaning tool where compressed air is blown from a nozzle of a can

**3.1.5****gas and vacuum type cleaning machine**

fibre optic connector end-face cleaning machine in which volatile liquid solvent (gas) is injected and extracted from a nozzle

**3.1.6****pen type cleaner**

probe type cleaner

cleaning tool for fibre optic connector end-faces, receptacles and fibre optic connector adaptors where a tape cleaning cloth at the top of the tool moves and cleans

**3.1.7****reel type cleaner**

cassette type cleaner

fibre optic connector plug end-face cleaning tool, in which a cleaning cloth roll is packed in a cassette box, with a small window for cleaning

**3.1.8****stick type cleaner**

swab type cleaner

fibre optic connector receptacle and fibre optic connector adaptor end-face cleaning tool in which a cleaning cloth is attached to the top of a stick

**3.2 Fibre optic connector parts****3.2.1****bulkhead adaptor**

adaptor mounted in a panel

Note 1 to entry: A bulkhead adaptor has one or more alignment sleeves in which two or more ferrules are aligned.

**3.2.2****dust cap**

cover or cap which is attached to a fibre optic connector plug, a fibre optic connector adaptor or an optical receptacle when the fibre optic connector is not connected to protect it from contamination

**3.2.3****exposed plug end-face****EPE**

fibre optic plug without any fixed optical end-face protection that can be held in the hand

EXAMPLE End of a patch cord.

Note 1 to entry: The ferrule is exposed to the air and is not confined within an alignment sleeve of a bulkhead adaptor or device port. The end-face of the plug is easy to access and can be brought into contact with cleaning material.

**3.2.4****port**

open fibre optic alignment sleeve which contains a fibre optic plug end-face to which a fibre optic plug can be mated

Note 1 to entry: In the case of a bulkhead adaptor, it is the open side of the adaptor after a fibre optic plug has been inserted into one side. In the case of an optical device, it is the opening into which a user of the device will plug

a patch cord. The mating side of a port can only be accessed through the alignment sleeve. Therefore, the cleaning material is brought to the end-face through the alignment sleeve.

### 3.2.5

#### **power blocking shuttered adaptor**

optical adaptor that has a shutter to block optical power emitted from a fibre optic connector plug

Note 1 to entry: An optical adaptor with shutter is a structure that, when two fibre optic connector plugs are interfaced and the fibre optic connector plug is removed at the shuttered side, the shutter automatically moves to block emitted optical power. There are two types of optical adaptors with shutter that have already been commercialized: one focuses on blocking the optical power and the other focuses on dust-proofness. Generally, power blocking shuttered adaptors that focus on blocking power often have a metal shutter within the optical adaptor.

Note 2 to entry: Refer IEC TR 62627-08.

## 4 Application of fibre optic connectors

### 4.1 General

Fibre optic connectors consist of several parts: connector plugs, receptacles, adaptors, dust caps, etc.

Optical communication network equipment generally has optical adaptors on the front panel or the back-plane to interface with other equipment or transmission lines. An optical patch cord, which has fibre optic connector plugs on both ends of an optical fibre cord, is generally used for optical connection between equipment.

### 4.2 Influence of contamination of fibre optic connector end-faces

Optical network equipment is located in the central offices, data centres, computer rooms, etc. The environment of these locations is not necessarily clean, and it is possible that dust or condensation is introduced onto the fibre optic connector end-faces, which can affect their optical performances (see Annex B).

## 5 Guidelines for handling fibre optic connectors

### 5.1 Guidelines for careful handling fibre optic connectors

Clause 5 describes guidelines for handling fibre optic connectors.

### 5.2 Storage of fibre optic connectors

Unused ports on optical network equipment, and unused fibre optic connector plugs on optical patch cords are covered or capped by clean dust caps. It is advisable a dust cap does not enter into contact with a fibre end-face when fitted. Optical patch cords are stored in clean closed and sealed boxes or bags. Used dust caps are cleaned before storage. Dust caps are stored in clean closed and sealed boxes or bags. Storage boxes or bags are ESD (electric static discharged) processed.

### 5.3 Connection of fibre optic connector plugs to ports on optical network equipment

For safety reasons, before connection, optical power is off. Dust caps are removed just before the optical connection is made. Before the optical connection, both the fibre optic connector end-faces to be mated are inspected, and cleaned if necessary, unless otherwise recommended by the manufacturer. Annex C shows an example of fibre optic connector end-face visual inspection equipment. It is advisable the applicable cleaning tools and machines are appropriate for fibre optic connector plugs and optical adaptors.

Clean fibre optic connector plugs are inserted in ports and mated securely.

#### **5.4 Disconnection of fibre optic connector plugs to ports**

Before disconnection, optical power is off.

Immediately after the disconnection, clean dust caps are fitted to fibre optic connector plugs and ports.

### **6 Dust caps**

Many shapes and materials of dust caps are available in the market. Appropriate dust caps are fitted. For fibre optic connector plugs, there are typically two types of dust caps: covering the top of the ferrule, or covering part of the plug housing. It is advisable dust caps have a structure so that their inner surfaces do not come into contact with the ferrule end-face when dust caps are fitted. Dust caps are processed to prevent the creation of a static electric charge. Dust caps are cleaned using an air duster.

### **7 Cleaning tools and machines**

#### **7.1 General**

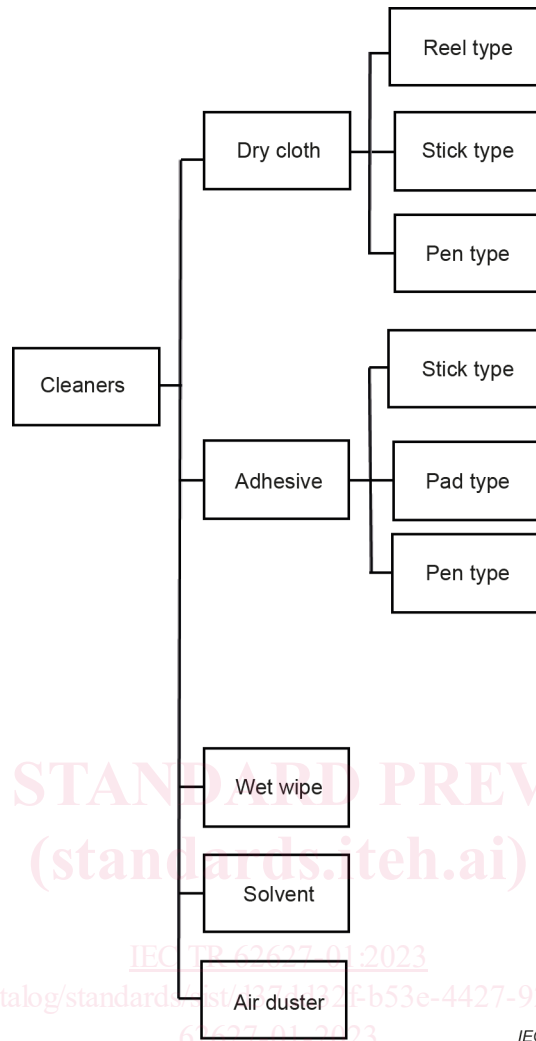

Clause 7 describes cleaning tools and machines for fibre optic connectors.

Cleaning tools and machines are classified as shown in Figure 1.

IEC STANDARD PREVIEW  
(standards.iteh.ai)

[IEC TR 62627-01:2023](https://standards.iteh.ai/catalog/standards/sist/d37dd32f-b53e-4427-9224-ad8723b58619/iec-tr-62627-01-2023)

<https://standards.iteh.ai/catalog/standards/sist/d37dd32f-b53e-4427-9224-ad8723b58619/iec-tr-62627-01-2023>

**Figure 1 – Classification of cleaning tools and machines**

Fibre optic connector cleaning tools or machines should be used.

Fibre optic connector plugs are easier to clean than optical receptacles or optical adaptors. A typical cleaning method for fibre optic connector plugs is to wipe the ferrule end-face with a cloth. As rubbing is possible to produce a static electric charge, which can attract contamination, it is advisable to use a fibre optic connector cleaner with cloth that has been processed so that it will not create a static electric charge. Lint-free cloths are also usually used.

Other than a cloth type, adhesive cleaning tools are available. Adhesive cleaning tools do not produce a static electric charge.

NOTE An ionizer can be useful to neutralize the electrostatic charge which can develop from the cleaning process.

Typical cleaning tools and machines are described in 7.2 to 7.10. This list is not exhaustive.

### 7.2 Reel type cleaner

A reel type cleaner is used for cleaning fibre optic connector plug end-faces, but is not suited for cleaning optical receptacles. The cleaning cloth in the reel type cleaner is rolled and packed in a cassette which has a small window into which the plug end-face is inserted for cleaning. Figure 2 shows an example of a reel type cleaner. The cleaning process of connector end-faces with reel type cleaner can result in an electrostatic charge (ESC) effect. Therefore, the cleaning cloth is processed to prevent the creation of a static electric charge. The fibre optic connector
