**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)**

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

## Ethernet-APL port profile specification

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 63444 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
65C/1250/DTS	65C/1275/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

## INTRODUCTION

IEEE Std 802.3™-2022, Clause 146 specifies the Ethernet Physical Layer 10BASE-T1L, suitable to be used for full-duplex communication over a single balanced pair of conductors.

This physical layer is specifically designed for industrial applications, supporting the main requirements for advanced, robust process control and monitoring in safe or hazardous areas.

The primary physical layer solution focuses on four requirements:

- support of single pair cables providing both communication and optional power;
- increased data bandwidth, 10 Mbit/s;
- support of extended Ethernet cable length of up to 1 km;
- support of intrinsically safe protection for use in hazardous areas.

IEEE Std 802.3-2022, Clause 146 only specifies the digital communication method and its electrical characteristics. To assure interoperability between the various interconnected components at different parts of the network, applying this new physical layer for industrial applications requires a further set of specifications and classifications. The "Ethernet Advanced Physical Layer" (Ethernet-APL or APL) references and standardizes industrial automation extensions.

This document specifies port profiles for use in non-hazardous and hazardous areas, with and without power. Ethernet-APL intrinsically safe profiles facilitate the examination of the interconnection of different Ethernet-APL ports. Most common industrial rated connectors for use in process industries are part of this document. A multi-length cable category system maintains communication integrity, while permitting cable constructions optimized for specific applications or environmental ratings.

Ethernet-APL impacts the various physical layers in IEC 61158-2 and its associated Types. This document provides a neutral approach for the new advanced physical layer which can be then transferred to the next editions of different IEC intrinsically safe fieldbus documents. The following documents are representative of potentially affected next editions: IEC 61158-2, IEC 61784-1 series, IEC 61784-2 series, IEC 61918, IEC 61784-5 series.

This document is not intended to assure interoperability at the product level but only at the port level. No reference is made to any Ethernet-based communication protocol above the physical layer.

## INDUSTRIAL NETWORKS –

### Ethernet-APL port profile specification

#### 1 Scope

This document is applicable to process automation equipment using a 10BASE-T1L compliant (see IEEE Std 802.3-2022, Clause 146) Physical Layer (PHY). Ethernet-APL intrinsically safe profiles with different predefined entity or limitation parameters (for example voltage, current, power, capacitance, inductance, cable length) simplify the examination of the interconnection of different Ethernet-APL ports.

The following technical features are part of this document:

- topology with trunk/spur installation capability;
- 2-wire technology (full-duplex communication data rate of 10 Mbit/s);
- long distance (refers to cable lengths of several hundred meters, with spans up to 1 000 m);
- intrinsic safety (installation of Ethernet-capable field devices in hazardous areas);
- power supply to field devices over the same 2-wire cable used for data communication.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

### 3 Terms, definitions, abbreviated terms and acronyms

#### 3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

##### 3.1.1

#### Advanced Physical Layer

##### APL

physical layer based on 10BASE-T1L according to IEEE Std 802.3-2022 with additional optional features like intrinsic safety, power over 2 wires

Note 1 to entry: Additional requirements for use in process industries are specified in this document.

##### 3.1.2

#### APL segment

segment that consists of two APL ports, each containing a 10BASE-T1L compatible PHY, connected at each end of a two-wire, shielded cable

Note 1 to entry: An APL segment can optionally be equipped with a maximum of two auxiliary devices and can contain up to 10 inline terminal connections. An auxiliary device corresponds to one inline connection; for example, having two auxiliary device connected to one APL segment will reduce the number of inline connections by two.

Note 2 to entry: An APL segment is either a trunk or a spur.

##### 3.1.3

#### APL switch

Ethernet switch including at least one APL compliant port

##### 3.1.4

#### APL port

electrical and mechanical interface of a device to an APL segment

##### 3.1.5

#### auxiliary device

device, which is connected within an APL segment and does not include a 10BASE-T1L PHY

Note 1 to entry: Auxiliary devices are defined in Annex B.

Note 2 to entry: An auxiliary device can comprise a power load or introduce communication signal insertion losses.

EXAMPLE A surge protector is an example of an auxiliary device.

##### 3.1.6

#### cable stub

unterminated branch of the segment cable

**3.1.7****cascade port**

APL port used in powered daisy chain networks

Note 1 to entry: If the cascade port is used in a powered ring network it shall be either a power source port or a power load port depending on the status of the ring.

**3.1.8****inline connection**

mated device or combination of devices, including terminations used to connect cables or cable elements to other cables or application specific equipment

**3.1.9****current event**

change of load current during power-up sequence with a specific characteristic

Note 1 to entry: A current event could be either a current step or a current spike.

**3.1.10****field switch**

APL switch having at least one port to which a spur can be connected

**3.1.11****port**

interface between a device and an APL segment

**3.1.12****port class**

port powering characteristics

**3.1.13****power switch**

APL switch including at least one port feeding power into a trunk

**3.1.14****PHY**

physical layer circuitry required to implement physical layer functions

**3.1.15****overcurrent condition**

condition when a power load port draws more than the minimum continuously provided current  $I_{PS(min)}$  of the power source port

**3.1.16****spur**

<APL> segment which connects a field device to a field switch

**3.1.17****segment**

point-to-point connection between two APL ports

**3.1.18****surge protective device****SPD**

electrical device that is used to protect electronic equipment against electrical surges and voltage spikes

Note 1 to entry: A SPD is an auxiliary device.

**3.1.19****trunk**

<APL> segment which connects a power switch to a field switch or a field switch to a field switch

**3.1.20****2-WISE**

2-Wire intrinsically safe Ethernet concept based on APL with standardized limits for intrinsic safety parameters, designed to simplify the examination process for components and cable parameters within APL segments

[SOURCE: IEC TS 60079-47:2021, 3.3, modified – a new term has been assigned.]

**3.1.21****2.4  $V_{pp}$  operating mode**

10BASE-T1L compliant operating mode with a signal amplitude of  $2,4 V_{pp}$

Note 1 to entry: This mode is used on APL trunk segments.

**3.1.22****1.0  $V_{pp}$  operating mode**

10BASE-T1L operating mode with a signal amplitude of  $1,0 V_{pp}$

Note 1 to entry: This mode is used on APL spur segments.

**3.2 Abbreviated terms, symbols and acronyms**

$C_{in}$	unlimited input capacitance of a load port
$E_{in}$	initial inrush energy of a load port or cascade port during power-up, caused by charging-up its input capacitance
EMC	electromagnetic compatibility
Ex	indicates that the electrical equipment corresponds to one or more of the types of protection which are subject of the standards IEC 60079-0 or IEC 60079-11
$I_{CSp(max)}$	maximum current during a current spike event of a load port during start-up
$I_{PS(min)}$	minimum continuously provided current at the power source terminals except during inrush or an overcurrent condition
$I_{PL(min)}$	minimum consumed current at the power load terminals except during inrush or an overcurrent condition
$I_{PL(max)}$	maximum consumed current at the power load terminals during an under voltage condition
$I_{PL(reverse)}$	reverse current for polarity sensitive power load ports
$P_{PL(min)}$	minimum available power at the power load terminals
$P_{PS(min)}$	minimum available output power at the power source terminals
PSANEXT	power sum alien near end crosstalk loss
PSAFEXT	power sum alien far end crosstalk loss
$Q_{CSp}$	electric charge during a current spike event for a load port during power-up
$R_{out}$	internal resistance of a power source port
$U_{PS(max)}$	maximum allowed voltage at the power source terminals over the full range of operating conditions
$U_{PS(min)}$	minimum available output voltage at the power source terminals over the full range of operation conditions
