

Designation: D8060 – 21

Standard Specification for 2-Bromo-3,3,3-Trifluoro-1-Propene (CF₃CBr=CH₂)¹

This standard is issued under the fixed designation D8060; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers requirements for 2-Bromo-3,3,3-Trifluoro-1-Propene (“2-BTP”) as a fire-fighting medium.

1.2 This specification does not address the fire-fighting equipment or hardware that employs 2-BTP or the conditions of employing such equipment (for example, handhelds, fixed installations, etc.).

1.3 This specification does not address the storage or transportation of 2-BTP. Storage, handling, and transportation issues are addressed in Practice D8061.

1.4 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.5 The following safety hazards caveat pertains only to the test methods portion, Section 6, of this specification:

1.5.1 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.* Specific hazards statements are given in Section 4.

1.6 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

2.1 *ASTM Standards:*²

49 CFR Part 172.101 Purpose and Use of Hazardous Materials Table

2.3 *AHRI Standard:*⁴

2008 Appendix C for Analytical Procedures for AHRI Standard 700-2014

2.4 *ASHRAE Standard:*⁵

ASHRAE Standard 34 Designation and Safety Classification of Refrigerants

3. Terminology

3.1 *Definitions of Terms Specific to This Standard:*

3.1.1 2-BTP, *n*—2-Bromo-3,3,3-Trifluoro-1-Propene (CF₃CBr=CH₂); a compound used to inert, extinguish, or suppress a fire or explosion hazard.

3.1.1.1 *Discussion*—The terminology system for fluorine-containing compounds (described in detail in ASHRAE Standard 34) provides a convenient means to reference the structure of individual compounds. By definition for unsaturated compounds, the first digit of the numbering system represents the number of unsaturated bonds; the second digit represents one less than the number of carbon atoms in the compound molecule; the third digit, one more than the number of hydrogen atoms in the compound molecule; and the fourth digit, the number of fluorine atoms in the compound molecule. Unaccounted for valence requirements are assumed to be chlorine atoms. In those instances where bromine (Br) is present in place of part or all of the chlorine, an uppercase letter B is added after the designation for the parent compound.

¹ This specification is under the jurisdiction of ASTM Committee D26 on Halogenated Organic Solvents and Fire Extinguishing Agents and is the direct responsibility of Subcommittee D26.09 on Fire Extinguishing Agents.

Current edition approved June 1, 2021. Published June 2021. Originally approved in 2016. Last previous edition approved in 2017 as D8060-17. DOI: 10.1520/D8060-21.

³ Code of Federal Regulations (CFR) documents are available from U.S. Government Publishing Office (GPO), 732 N. Capitol St., NW, Washington, DC 20401-0001, <http://www.gpo.gov>.

⁴ Available from Air-Conditioning, Heating, and Refrigeration Institute, 2311 Wilson Blvd., Suite 400, Arlington, VA 22201, <https://www.ahrinet.org>.

⁵ Available from American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc. (ASHRAE), 1791 Tullie Circle, NE, Atlanta, GA 30329, <http://www.ashrae.org>.

The number following the letter B represents the number of bromine atoms present. For example, the designation R-1233B1 indicates a compound with one unsaturated bond (1), three carbon atoms (2 + 1), two hydrogen atoms (3 - 1), three fluorine atoms (3), and one bromine atom (B1). Since the number of atoms required based on valence requirements are met, there is no chlorine present. Example: CF₃CBr=CH₂ is equivalent to R-1233B1.

4. Material Requirements

4.1 “2-BTP” shall conform to the requirements prescribed in Table 1 when tested by the appropriate test methods listed in Section 6.

4.1.1 When a material analysis is required, by agreement between the purchaser and the supplier, the total pressure in the 2-BTP container, the fill density of 2-BTP within the container and the maximum safe storage temperature shall be part of the material analysis (certification). The pressure shall be reported in pound-force per square inch gauge (preferred) or bar. The fill density shall be reported in pounds per cubic foot at 70 °F (preferred) or kilograms per cubic meter at 21 °C. The maximum safe storage temperature of the 2-BTP container shall be reported in degrees Fahrenheit (preferred) or in degrees Celsius and shall conform to applicable regulations for the 2-BTP container design and use.

4.2 By agreement between the purchaser and the supplier, analysis may be required and limits established for elements or compounds not specified in Table 1.

4.3 Prolonged exposure to concentrations of 2-BTP in excess of 1 % by volume in air during periods of elevated adrenaline could produce cardiac arrhythmia in some personnel.

5. Sampling

5.1 Samples of 2-BTP shall be taken from the liquid phase in a closed system as described in 2008 Appendix C to AHRI Standard 700-2014, Part 7.

5.2 The 2-BTP selected in accordance with 5.1 shall be tested for quality conformance in accordance with Table 1. The presence of one or more defects shall be cause for rejection.

6. Test Methods

6.1 *Purity*—Conduct the analysis in accordance with Practice D6806, or in accordance with 2008 Appendix C to AHRI Standard 700-2014, Part 7.

6.2 *Acidity*—Conduct the analysis in accordance with the method specified in 2008 Appendix C to AHRI Standard 700-2014, Part 1.

6.3 *Water Content*—Conduct the analysis in accordance with the method specified in 2008 Appendix C to AHRI Standard 700-2014, Part 2.

6.4 *Nonvolatile Residue*—Conduct the analysis in accordance with the method specified in 2008 Appendix C to AHRI Standard 700-2014, Part 3.

6.5 *Suspended Matter or Sediment*—While performing the nonvolatile residue analysis, examine visually for any suspended matter or sediment. Observation of any suspended matter or sediment shall constitute failure of the test.

6.6 *Stabilizers*—This compound requires stabilizing additives. The original manufacturer should be consulted.

7. Container, Packaging, and Package Marking

7.1 This material is not regulated as a hazardous material by Department of Transportation (DOT).

7.2 Containers should be marked with the following information as a minimum:

7.2.1 Supplier’s name and address,

7.2.2 “2-Bromo-3,3,3-Trifluoro-1-Propene,” and

7.2.3 Statement that material conforms to Specification D8060.

8. Keywords

8.1 2-bromo-3,3,3-trifluoro-1-propene; 2-bromo-3,3,3-trifluoropropene; 2-BTP; bromotrifluoropropene; BTP; CF₃CBr=CH₂; fire extinguishant; fire suppressant; Halotron⁶ BrX; HBFO-1233xBr; R-1233B1

⁶ Halotron is a trademark of American Pacific Corporation.

TABLE 1 Requirements

Property	Requirement
2-BTP Purity	99.0 %, vol/mol, min
Acidity	3.0 ppm by mass, as HCl, max
Water content	20 ppm by mass, max
Nonvolatile residue	0.45 % by weight, max
Suspended matter or sediment	none visible
Stabilizers	present

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
