

Designation: E2767 – 21

## Standard Practice for Digital Imaging and Communication in Nondestructive Evaluation (DICONDE) for X-ray Computed Tomography (CT) Test Methods<sup>1</sup>

This standard is issued under the fixed designation E2767; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

#### 1. Scope

1.1 This practice facilitates the interoperability of X-ray computed tomography (CT) imaging equipment by specifying image data transfer and archival storage methods in commonly accepted terms. This document is intended to be used in conjunction with Practice E2339 on Digital Imaging and Communication in Nondestructive Evaluation (DICONDE). Practice E2339 defines an industrial adaptation of the NEMA Standards Publication titled Digital Imaging and Communications in Medicine (DICOM, see http://medical.nema.org), an international standard for image data acquisition, review, storage and archival storage. The goal of Practice E2339, commonly referred to as DICONDE, is to provide a standard that facilitates the display and analysis of NDE test results on any system conforming to the DICONDE standard. Toward that end, Practice E2339 provides a data dictionary and a set of information modules that are applicable to all NDE modalities. This practice supplements Practice E2339 by providing information object definitions, information modules and a data dictionary that are specific to X-ray CT test methods.

1.2 This practice has been developed to overcome the issues that arise when analyzing or archiving data from tomographic test equipment using proprietary data transfer and storage methods. As digital technologies evolve, data must remain decipherable through the use of open, industry-wide methods for data transfer and archival storage. This practice defines a method where all the X-ray CT technique parameters and test results are communicated and stored in a standard manner regardless of changes in digital technology.

1.3 This practice does not specify:

1.3.1 A testing or validation procedure to assess an implementation's conformance to the standard.

1.3.2 The implementation details of any features of the standard on a device claiming conformance.

1.3.3 The overall set of features and functions to be expected from a system implemented by integrating a group of devices each claiming DICONDE conformance.

1.4 Units—Although this practice contains no values that require units, it does describe methods to store and communicate data that do require units to be properly interpreted. The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.5 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.

1.6 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

#### 3. Terminology

3.1 Definitions:

3.1.1 Nondestructive evaluation terms used in this practice can be found in Standard Terminology for Nondestructive Examinations, E1316.

3.1.2 Computed Tomography terms used in this practice can be found in Standard Guide for Computed Tomography (CT) Imaging, E1441.

3.1.3 DICONDE terms used in this practice are defined in Practice E2339.

#### 4. Summary of Practice

4.1 A fundamental principle of DICONDE is the use of standard definitions and attribute formats for data communication and storage. This means all systems that are DICONDE compliant use a common data dictionary and common communication protocols. To further standardization, the elements in the data dictionary are organized into common groups referred to as information modules. The data dictionary and information modules common to all NDE modalities are defined in Practice E2339.

4.2 The data dictionary and information modules specified in Practice E2339 do not cover the information storage requirements for each individual modality (CT, DR, CR, UT, etc.). Additions to the data dictionary and information modules are required to support the individual modalities. This practice contains the additions to the DICONDE data dictionary and information modules necessary for X-ray CT inspection.

4.3 The highest organizational level in the DICONDE information model is the information object definition (IOD). An information object definition is a collection of the information modules necessary to represent a set of test results from a specific modality. This practice contains information object definitions for X-ray CT inspection.

#### 5. Significance and Use

5.1 Personnel that are responsible for the creation, transfer, and storage of X-ray tomographic NDE data will use this standard. This practice defines a set of information modules that along with Practice E2339 and the DICOM standard provide a standard means to organize X-ray tomography test parameters and results. The X-ray CT test results may be displayed and analyzed on any device that conforms to this standard. Personnel wishing to view any tomographic inspection data stored according to Practice E2339 may use this document to help them decode and display the data contained in the DICONDE-compliant inspection record.

#### 6. Information Object Definitions

#### 6.1 X-ray CT Image IOD Description:

6.1.1 The X-ray CT Image Information Object Definition specifies an image that has been created by an X-ray CT imaging device for NDE purposes. To avoid duplication of relevant material from the DICOM standard, the IOD definition will follow that for CT Images found in Part 3, Section A.3 of the DICOM standard except as noted below in Table 1. Table 1 is not stand-alone and must be used in conjunction with

Part 3, Section A.3 of the DICOM standard to have a complete definition of the DICONDE CT information object. In addition to the DICONDE information modules specified in Practice E2339 and this standard, the DICONDE CT IOD utilizes additional DICOM standard information modules as noted in Table 1.

6.1.2 This IOD will use the Service-Object Pair (SOP) Classes for the CT IOD as defined in Part 4, Section B.5 of the DICOM standard.

#### 6.2 X-ray CT Multi-Frame Image IOD Description:

6.2.1 The X-ray CT Multi-Frame (CT-MF) Image Information Object Definition specifies a multi-frame image that has been created by an X-ray CT imaging device for NDE purposes. To avoid duplication of relevant material from the DICOM standard, the IOD definition will follow that for Enhanced CT Images found in Part 3, Section A.38 of the DICOM standard except as noted below in Table 2. Table 2 is not stand-alone and must be used in conjunction with Part 3, Section A.38 of the DICOM standard to have a complete definition of the DICONDE CT-MF information object.

6.2.2 This IOD will use the Service-Object Pair (SOP) Classes for the Enhanced CT IOD as defined in Part 4, Section B.5of the DICOM standard.

#### 7. Information Modules

7.1 NDE CT Image Module:

7.1.1 Table 3 specifies the Attributes that describe the NDE X-ray CT image module.

7.2 NDE X-ray CT Detector Module:

7.2.1 Table 4 specifies the Attributes that describe NDE X-ray CT Detectors.

7.2.1.1 For X-ray CT Detector module, Detector Type (0018,7004) is specified to use the following defined terms:

#### DIRECT SCINTILLATOR

7.2.1.2 For X-ray CT Detector module, Detector Configuration (0018,7005) is specified to use the following defined terms:

#### AREA

LINEAR

7.3 NDE X-ray CT Calibration Data Module:

7.3.1 Table 5 specifies the Attributes that describe NDE X-ray CT calibration data.

7.4 NDE Multi-Frame Functional Group Attributes:

7.4.1 Table 6 specifies the Attributes that describe the NDE Multi-Frame Functional Group Elements which are described in DICOM 7.4, DICOM, Part 3, Sections C.8.15.3.2-C8.15.3.13.

7.5 Table 7 specifies the attributes that describe the NDE Enhanced Multi-energy CT Acquisition Data Module which is described in DICOM, Part 3, Section C.8.15.4.

7.6 NDE CT Multi-Frame Image Module:

7.6.1 Table 8 specifies the attributes that describe the NDE CT Multi-Frame Image Module.

#### TABLE 4 NDE X-ray CT Detector Module Attributes

Attribute Name	Тад	VR	VM	ТуреА	Description
Detector Type	(0018,7004)	CS	1	2	The type of detector used to acquire projection data.
Detector Configuration	(0018,7005)	CS	1	3	The physical configuration of the detector.
Detector Description	(0018,7006)	LT	1	3	Free-text description of the detector.
Detector Mode	(0018,700A)	LT	1	3	Text description of the operating mode of the detector.
Detector ID	(0018,7008)	SH	1	3	The ID or serial number of the detector used to acquire projection data.
Date of Last Detector Calibration	(0018,700C)	DA	1-n	3	Date of the last calibration for the detector.
Time of Last Detector	(0018,700E)	ТМ	1-n	3	Time of the last calibration for the equipment used to pulse the
Calibration Detector Active Time	(0018,7014)	DS	1	3	transducer. Time in msec that the detector is active during acquisition of this
Detector Activation Offset from Exposure	(0018,7016)	DS	1	3	data. Offset time in msec that the detector becomes active after the X-ray beam is turned on during the acquisition of this data. May be
Detector Binning	(0018,701A)	DS	2	3	negative. Number of active detectors used to generate a single pixel. Specified as the number of row detectors per pixel followed by the
Internal Detector Frame Time	(0014,3011)	DS	1	3	number of column detectors. The time in msec that the detector is acquiring an image.
Number of Frames	(0014,3012)	DS	1	3	The number of frames to form an image.
Detector Manufacturer's Name	(0018,702A)	LO	1	3	Name of the manufacturer of the detector component of the acquisition system.
Detector Manufacturer's Model Number	(0018,702B)	LO	1	3	Model number of the detector component of the acquisition system.
Detector Conditions Nominal Flag	(0018,7000)	CS	1	3	A flag that indicates whether or not the detector is operating within normal tolerances during data acquisition. This flag is intended to indicate whether there has been some compromise of the diagnostic quality of the data due to some operating condition (for
Sensitivity	(0018,6000)	DS		<b>4</b> -3-0	example, overheating).  Detector sensitivity in manufacturer specific units. <sup>B</sup>
Field of View Shape	(0018,1147)	CS			Shape of the Field of View, that is, the image pixels.
Field of View	(0018,1149)	IS	1-2	3	Dimensions in mm of the Field of View.
Dimension(s)					
Field of View Origin	(0018,7030)	DS	// 2Ual	10	Left Hand Corner (TLHC) of a rectangle circumscribing the Field of View before rotation or flipping, from the TLHC of the physical
					detector area measured in physical detector pixels as a row offset followed by a column offset.
Field of View Rotation	(0018,7032)	DS	1	1C	Required if the Field of View has been rotated Clockwise rotation in degrees of the Field of View relative to the physical detector.
Field of View Horizontal	(0018,7034)	CS	<u>1ASTN</u>	/I E1C/67-	2 Required if the Field of View has been rotated Whether or not a
Flip https://standard	s.iteh.ai/cata				horizontal flip has been applied to the Field of View after rotation relative to the physical detector as described in the Field of View Rotation.
Imager Pixel Spacing	(0018,1164)	DS	2	1	Physical distance measured at the front plane of the detector housing between the center of each image pixel specified by a numeric pair – row spacing value followed by a column spacing
Detector Element Physical Size	(0018,7020)	DS	2	3	value in mm. Physical dimensions of each detector element in mm that comprises the detector matrix. Expressed as the row dimension followed by the column dimension.
Detector Element Spacing	(0018,7022)	DS	2	3	Physical distance between the center of each detector element, specified by a numeric pair – row spacing value in mm followed by column spacing value in mm.
Detector Active Shape	(0018,7024)	CS	1	3	Shape of the active area.
Detector Active	(0018,7026)	DS	1-2	3	Dimension(s) in mm of the active area.
Dimension(s)	, , , , ,	-		-	
Detector Active Origin	(0018,7028)	DS	2	3	Offset of the TLHC of a rectangle circumscribing the active detector area from the TLHC of a rectangle circumscribing the physical detector area, measures in physical detector pixels as a row offset followed by a column offset.
Detector Temperature Sequence	(0014,3020)	SQ	1	3	Sequence that contains detector temperature information.
> Sensor Name	(0014,3022)	ST	1	3	The name of the sensor.
> Horizontal Offset	(0014,3022)	DS	1	3	The horizontal offset in mm from the left position of the detector.
> Vertical Offset	(0014,3024)	DS	1	3	The horizontal offset in mm from the top position of the detector.
> Temperature	(0014,3028)	DS	1	3	Temperature in Celsius of the sensor.
	(0014,0020)	00	I	5	ויניוויטימנעוב ווי טבוטעט טו גווב שלווטטו.

<sup>A</sup> Definition of type codes can be found in Part 5, Section 7.4 of the DICOM standard. <sup>B</sup> This value is intended to provide a single location where the manufacturer specific information can be found for annotation on a display or film that has meaning to a knowledgeable observer.
