About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications, symboles graphiques et le glossaire. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 500 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 25 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**FIBRE OPTIC INTERCONNECTING DEVICES AND
PASSIVE COMPONENTS – BASIC TEST AND
MEASUREMENT PROCEDURES –****Part 2-44: Tests – Flexing of the strain relief
of fibre optic devices and components**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61300-2-44 has been prepared by subcommittee SC86B: Fibre optic interconnecting devices and passive components, of IEC technical committee 86: Fibre optics. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2013. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) replaced active monitoring with transient loss for measurements during test;
- b) harmonized recommended severities according to IEC 61753-1.

The text of this International Standard is based on the following documents:

Draft	Report on voting
86B/4847/FDIS	86B/4870/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts of IEC 61300 series, published under the general title *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

<https://standards.iteh.ai/catalog/standards/iec/ff391e36-b551-401c-8eeb-a556b2615050/iec-61300-2-44-2024>

FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS – BASIC TEST AND MEASUREMENT PROCEDURES –

Part 2-44: Tests – Flexing of the strain relief of fibre optic devices and components

1 Scope

This part of IEC 61300 specifies a test to determine the influence of flexing under tensile load of the strain relief of fibre optic interconnecting devices or components. The intention is to simulate the number of flexing cycles which would typically be experienced during service life. This test is applied to both single fibre cable and multiple fibre cable.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61300-1, *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures – Part 1: General and guidance*

IEC 61300-3-1, *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures – Part 3-1: Examinations and measurements – Visual examination*

<https://www.intelstandards.com/standards/iec-61300-2-44-2024>
IEC 61300-3-28, *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures – Part 3-28: Examinations and measurements – Transient loss*

IEC 61753 (all parts), *Fibre optic interconnecting devices and passive components – Performance standard*

IEC 62005 (all parts), *Fibre optic interconnecting devices and passive components – Reliability*

3 Terms, definitions, and abbreviated terms

3.1 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.2 Abbreviated terms

DUT device under test

4 General description

During the test, the DUT is rotated $\pm 90^\circ$ in the plane of the cable about an axis perpendicular to the axis of the attached cable. In the case of non-circular cable (ribbon, duplex, etc.), the loads shall not be doubled and the rotation is parallel to the width of the minor axis of the cable as shown in Figure 1. This causes flexing of the strain relief and cable close to the DUT. During the flexing, a tensile force, but no torque, is applied.

Key

- 1 tensile load
- 2 duplex cordage
- 3 rotation axis of the mounting fixture in the apparatus

Figure 1 – Application of the load in the case of non-circular cable, example of duplex cordage

5 Apparatus

5.1 General

The apparatus for testing and the flexing patterns involved are presented in Figure 2.

[IEC 61300-2-44:2024](https://standards.iteh.ai/catalog/standards/iec/ff391e36-b551-401c-8eeb-a556b2615050/iec-61300-2-44-2024)

<https://standards.iteh.ai/catalog/standards/iec/ff391e36-b551-401c-8eeb-a556b2615050/iec-61300-2-44-2024>

**Key**

- 1 DUT
- 2 mounting fixture
- 3 optical source
- 4 detector
- 5 tensile load

L length from the point of flexing to the point of application of the tensile load

NOTE 1 Optical source and detector can be exchanged.

NOTE 2 The rotational orientation of the connector is shown with its key (black rectangle) toward the viewer and perpendicular to the direction of the load.

Figure 2 – Apparatus for testing

5.2 Optical source

The source shall be in accordance with IEC 61300-3-28.

5.3 Detector

The detector shall be in accordance with IEC 61300-3-28.

5.4 Mounting fixture

The mounting fixture rigidly holds the DUT in correct alignment during the test. If the device is a fibre optic connector, an adaptor or a receptacle may be used as a mounting fixture. The fixture shall not distort the DUT. The fixture shall allow the DUT to be connected to monitoring equipment. The fixture shall be capable of rotating the DUT $\pm 90^\circ$ either manually or by using a machine.

5.5 Tensile load

Tensile load to be applied on the DUT is specified in the relevant IEC 61753 series performance standard or IEC 62005 series reliability document. Required tensile load may be created by weights or another suitable mechanism. Values of recommended loads are given in Table 1.

6 Procedure

6.1 Preparation of DUT

Prepare and clean the DUT in accordance with the manufacturer's instructions.

Visually check that the attachment of the cable to the fibre optic device is not damaged in accordance with IEC 61300-3-1.

6.2 Preconditioning

Pre-condition the DUT and all equipment for at least 2 h at the standard atmospheric conditions as defined in IEC 61300-1.

6.3 Mounting the DUT

Mount the DUT on the apparatus. If the DUT is a fibre optic connector, the rotational orientation of the connector around the longitudinal axis (position of the key) in the fixture shall be reported. In the case of non-symmetrical connectors with circular cables, the DUT shall be tested in both rotational orientations.

6.4 Measuring of initial optical properties

The flexing arm shall be put in a vertical position.

Measure the optical properties specified in the relevant IEC 61753 series performance standard or IEC 62005 series reliability document.

The initial loss shall be recorded and used as a reference for the evaluation of transient loss during and after test.

6.5 Conditioning

Apply the specified tensile load and apply the specified number of flexing cycles (see Clause 7).

The cable length from the point of flexing to the point of application of the weight shall be $25 \text{ cm} \pm 5 \text{ cm}$ (see " L " in Figure 2).

A flexing cycle contains a movement from position 0° to $+90^\circ$, a movement from position $+90^\circ$ to 0° , a movement from position 0° to -90° and a movement from position -90° to 0° .

Measure the transient loss during test in accordance with IEC 61300-3-28.

Stop the flexing with the flexing arm in vertical position. Remove the tensile load.
