

Designation: **B131–17** **B131 – 22**

Standard Specification for Copper Alloy Bullet Jacket Cups ¹

This standard is issued under the fixed designation B131; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This specification establishes the requirements for bullet jacket preform cups produced of Copper Alloy UNS No. C22000 for processing into bullet jackets of the following types and classes:

1.1.1 *Type I*—Caliber 0.30.

1.1.2 *Type II*—Caliber 0.45.

1.1.3 *Type III*—Caliber 0.50.

1.1.4 *Type IV*—As specified in the contract or order.

1.1.5 *Class I*—Not annealed.

1.1.6 *Class II*—Annealed.

1.2 *Units*—The values stated in inch-pound units are to be regarded as standard, except for grain size, which is given in SI units. The values given in parentheses are mathematical conversions to SI units, which units that are provided for information only and are not considered standard.

1.3 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

*A Summary of Changes section appears at the end of this standard

E478 Test Methods for Chemical Analysis of Copper Alloys

3. Terminology

3.1 For definitions of terms related to copper and copper alloys, see refer to Terminology B846.

3.2 *Definitions of Terms Specific to This Standard:*

3.2.1 *cup (cupping), n*—a shallow cylindrical shell closed at one end, normally intended for further fabrication, formed from a blank.

4. Ordering Information

4.1 Include the following specified choices when placing orders for product under this specification, as applicable:

4.1.1 ASTM designation and year of ~~issue~~issue,

4.1.2 Type and class (Section 1),

4.1.3 Grain size (Section 8),

4.1.4 Dimensions and tolerances (~~see~~Subsection 9.1),

4.1.5 Drawing number to which order applies (~~see~~Subsection 9.1),

4.1.6 Work test requirements, if required (Section 12), and

4.1.7 If product is purchased for agencies of the U.S. Government (see the Supplementary Requirements section of this specification for additional requirements, if specified).

5. Materials and Manufacture

5.1 *Materials:*

5.1.1 The material of manufacture shall be annealed plate, sheet, strip, or disks of wrought Copper Alloy UNS No. C22000 processed to produce even-topped cups.

5.2 *Manufacture:*

5.2.1 The product shall be manufactured by such blanking and cupping to meet the cup dimensions specified, and subsequently annealed, if required. The annealed cups shall be cleaned to provide a surface suitable for subsequent redrawing into bullet jackets.

6. Chemical Composition

6.1 The product shall conform to the chemical composition requirements ~~prescribed in~~ **Table 1**.

6.2 These composition limits do not preclude the presence of other elements. By agreement between the manufacturer and purchaser, limits may be established and analysis required for unnamed elements.

TABLE 1 Chemical Requirements

Element	Composition, %
Copper	89.0–91.0
Lead, max	0.05
Iron, max	0.05
Bismuth, max	0.006
Zinc	remainder

6.3 Because zinc is listed as “remainder,” either copper or zinc may be taken as the difference between the sum of results of all other elements determined and 100 %. When all elements in [Table 1](#) are determined, the sum of the results shall be 99.8 % min.

7. Temper

7.1 The standard tempers for products described in this specification are given in [Table 2](#).

7.1.1 Annealed tempers OS025 and OS040.

8. Grain Size for Annealed Tempers

8.1 Grain size shall be the standard requirement for all product in the annealed tempers.

8.1.1 Unless there is a prior agreement between the purchaser and supplier, the grain size of class II cups shall be produced to the grain size requirements specified in [Table 2](#).

8.1.2 Grain size ranges other than those specified in [Table 2](#) shall be established by agreement between the manufacturer and purchaser.

8.1.3 Grain size ranges for other cups shall be established by agreement between the manufacturer and purchaser.

8.1.4 Acceptance or rejection based upon grain size shall depend only on the average grain size of a test specimen taken from each of two sample portions, and each specimen shall be within the limits prescribed in [Table 2](#) when determined in accordance with Test Methods [E112](#).

9. Dimensions, Mass, and Permissible Variation

9.1 All dimensions and tolerances of cups shall be as indicated on the drawings furnished with the purchase order or contract.

10. Workmanship, Finish, and Appearance

10.1 The cups shall be uniform in quality and shall be free of conditions which would interfere with the purpose for which the cups are intended.

11. Sampling

11.1 The lot size, portion size, and selection of pieces shall be as follows:

11.1.1 *Lot Size*—40 000 lb (18 144 kg) or fraction thereof.

11.1.2 *Portion Size*:

11.1.2.1 For chemical analysis—5 cups. In accordance with Practice [E255](#), drillings, millings, etc., shall be taken in approximately equal weight from each of the sample cups selected and combined into one composite sample. The minimum weight of the composite sample that is divided into three equal parts shall be 150 g. Each of the three equal parts shall be placed in a package and sealed: one for the seller, one for the purchaser, and one for an umpire.

11.1.2.2 For grain size—20 cups.

11.1.2.3 For determination of dimensions—200 cups.

TABLE 2 Grain Size Requirements

Standard Temper Designation (B601)	Grain Size, mm		
	Nominal	Min	Max
OS025	0.025	0.015	0.035
OS040	0.040	0.025	0.050

11.1.2.4 For the visual inspection—2000 cups.

11.1.2.5 For work tests—500 cups or 5000 cups, when and as required.

12. Number of Tests and Retests

12.1 Test:

12.1.1 *Chemical Analysis*—See 11.1.2.1.

12.2 Other Tests:

12.2.1 *Visual Inspection*—Each cup in the sample shall be visually inspected.

12.2.1.1 *Major Defects*—Not more than 0.25 % of the cups in the sample shall contain the following major defects—scaly metal, deep scratches, laminations, slivers, laps, cracks, and wrinkles.

12.2.1.2 *Minor Defects*—Not more than 2 % of the cups in the sample shall contain the following minor defects—oily cup, greasy cup, dirty or gritty cup, oxidized cup, dented or bent edges, and scratches.

12.2.2 *Grain Size*—Each cup in the sample shall be tested.

12.2.3 *Work Test*—If required by the purchase order or contract, one of the following work tests may be performed by the purchaser before approval of a lot for shipment:

12.2.3.1 Five hundred cups or more shall be subjected to a working test by processing them through the first drawing operation. The cups shall draw satisfactorily without showing defects that will cause them to be unsuitable for the purpose intended.

12.2.3.2 Five thousand cups shall be subjected to a working test by processing them satisfactorily into bullet jackets.

12.3 Retest:

12.3.1 When requested by the manufacturer or supplier, a retest shall be permitted when results of tests obtained by the purchaser fail to conform to the requirements of the product specification.

12.3.2 If the material fails to pass the visual inspection examination or a work test, or if more than one specimen fails the grain size test, a retest shall be permitted on a sample double that of the original sample. The result of the retest or retests shall meet the specified requirements.

12.3.3 *Chemical Analysis*—An additional sample in accordance with 11.1.2.1 is permitted to be made and tested.

13. Specimen Preparation

13.1 For grain size measurements, either tangential grinding and polishing, or cutting, mounting, and polishing methods may be used to reach the zone (Fig. 1).

13.1.1 The test specimen shall be prepared in accordance with Guide E3.

13.2 Specimens for chemical analysis shall be prepared in accordance with Practice E255.

14. Test Methods

14.1 Chemical Analyses:

14.1.1 In cases of disagreement, test methods for chemical analysis shall be subject to agreement between the manufacturer or

FIG. 1 Location of Areas to Be Examined for Grain Size in Bullet Jacket Cups

supplier and the purchaser. The following table is a list of published methods, some of which may no longer be viable, which along with others not listed, may be used subject to agreement.

Test	Method
Copper	E478
Lead	E478 (AA)
Iron	E478
Zinc	E478 (Titrimetric)

14.1.2 The test method(s) to be followed for the determination of element(s) resulting from contractual or purchase order agreement shall be as agreed upon between the manufacturer or supplier and purchaser.

14.1.2.1 Since no recognized test method is known to be published, the determination of bismuth shall be subject to agreement between the manufacturer and the purchaser.

14.2 Other Tests:

14.2.1 The product furnished shall conform to specified requirements when subjected to test in accordance with the following table:

Test	Method
Grain Size	E3, E112

14.2.2 Grain size measurements shall be made in a zone that is the approximate mid-point of the side-wall length and thickness of the cups as shown in Fig. 1. At least three measurements shall be made, averaged, and recorded for each grain size determination.

15. Significance of Numerical Limits

15.1 For the purpose of determining compliance with the specified limits for requirements of the properties listed in the following table, table and for dimensional tolerances, an observed value, value or a calculated value, value shall be rounded as indicated in accordance with the rounding method of Practice E29.
