

Designation: B103/B103M - 19 B103/B103M - 23

Standard Specification for Phosphor Bronze Plate, Sheet, Strip, and Rolled Bar¹

This standard is issued under the fixed designation B103/B103M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope*

1.1 This specification <u>establishes_covers</u> the requirements for copper-tin alloy (phosphor bronze), copper-tin-lead alloy (leaded phosphor bronze), and copper-tin-lead-zinc alloy (bearing bronze), plate, sheet, strip, and rolled <u>bar. bar for general application produced from Copper Alloy UNS Nos. C51000, C51100, C51180, C51900, C52100, C52180, C52400, C53400, and C54400. The phosphor bronzes commonly are used for deep drawing into bellows and stamping and forming into spring devices and into terminals and connectors for electrical apparatus because they combine high strength with high elongation. The leaded phosphor bronzes are used where strength, corrosion resistance, and machinability are required. The bearing bronze is used in bushings, bearings, and load-bearing thrust washers. The following alloys are covered:</u>

Copper Alloy		Nominal Cor		Previously Used

^A SAE Specification CA 521 conforms to the requirements of UNS No. C52100.

Note 1—All of the above alloys contain small amounts of phosphorus, used as a deoxidant in melting, and to enhance the mechanical properties.

- 1.2 <u>Units</u>—The values stated in either inch-pound units or SI units are to be regarded separately as standard. Within the text, SI units are shown in brackets. The values stated in each system are not necessarily exact equivalents; therefore, to ensure conformance with the standard, each system shall be used independently of the other, and other. Combining values from the two systems shall not be combined may result in non-conformance with the standard.
- 1.3 The following safety hazard caveat pertains only to the test method(s) described in this specification.

¹ This specification is under the jurisdiction of ASTM Committee B05 on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.01 on Plate, Sheet, and Strip.

Current edition approved Oct. 1, 2019Oct. 1, 2023. Published October 2019October 2023. Originally approved in 1936. Last previous edition approved in 20152019 as B103/B103/B103M - 19.—15. DOI: 10.1520/B0103_B0103M—19.10.1520/B0103_B0103M—23.

- 1.3.1 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.
- 1.3 The following safety hazard caveat pertains only to the test method(s) described in this specification. This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.
- 1.4 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

³ The last approved version of this historical standard is referenced on www.astm.org.

- 3.1.12 Test Reports; Reports
- 3.1.13 Packaging and Package Marking; and Marking
- 3.1.14 Supplementary Requirements. Requirements
- 3.2 In addition, when a section with a title identical to that referenced in 5.13.1, above, appears in this specification, it contains additional requirements, which supplement those appearing in Specifications B248 and B248M

4. Terminology

4.1 Definitions—For definitions of terms used in this specification, related to copper and copper alloys, refer to Terminology B846.

5. Ordering Information

- 5.1 Include the following specified choices when placing orders for product under this specification, as applicable:
- 5.1.1 ASTM designation and year of issue (for example, issue, B103/B103M 04);
- 5.1.2 Copper [Alloy] UNS No. designation (for example, C51000); designation,
- 5.1.3 Temper, Temper,
- 5.1.4 Dimensions: thickness, width, length, and so forth; edges, and length, if applicable,
- 5.1.5 Form: plate, sheet, strip, or rolled bar; bar,
- 5.1.6 How furnished: coils, specific length or stock lengths, with or without ends; ends, and
 - 5.1.7 Quantity: total weight each form, temper, and size; and, size.
 - 5.1.8 When material is purchased for agencies of the U.S. Government.

https://standards.iteh.ai/catalog/standards/sist/800822d7-b7e8-4cb8-ba1b-d60416d35709/astm-b103-b103m-23

- 5.2 The following options are available but may not be included unless and, when required, shall be specified at the time of placing of the order when required: the order:
- 5.2.1 Type of edge: slit, sheared, sawed, square corners, round corners, rounded edges, or full rounded edges; edges,
- 5.2.2 Width and straightness tolerances; tolerances,
 - 5.2.3 Heat identification or traceability details; details,
 - 5.2.4 Certification,
- 5.2.5 Certification; Test Report, and
 - 5.2.6 Test Report.If product is purchased for agencies of the U.S. Government see the Supplementary Requirements section of Specifications B248 and B248M for additional requirements, if specified.

6. Materials and Manufacture

- 6.1 Materials:
- 6.1.1 The material of manufacture shall be a <u>east form (cast bar, cake, slab, et cetera)</u> of Copper Alloy UNS No. C51000, C51100, C51180, C51900, C52100, C52100, C52400, C53400, or C54400 of such purity and soundness as to be suitable for processing into the products prescribed herein.

6.1.2 When specified in the contract or purchase order that heat identification or traceability is required, the purchaser shall specify the details desired.

Note 2—Due to the discontinuous nature of the processing of castings into wrought products, it is not always practical to identify a specific casting analysis with a specific quantity of finished material.

6.2 Manufacture:

- 6.2.1 The product shall be manufactured by such hot working, cold working, and annealing processes as to produce a uniform wrought structure in the finished product.
- 6.2.2 The product shall be hot or cold worked to the finished size and subsequently annealed, when required, to meet the temper properties specified.
- 6.2.3 Edges—Slit edges shall be furnished unless otherwise specified in the contract or purchase order.

6.3 *Edges*:

6.3.1 Slit edges shall be furnished unless otherwise specified in the contract or purchase order.

7. Chemical Composition

- 7.1 The <u>materials material</u> shall conform to the chemical composition requirements <u>specified</u> in <u>Table 1</u> for the <u>copper alloy Copper</u> Alloy UNS No. <u>designation</u> specified in the ordering information.
- 7.2 These composition limits do not preclude the presence of other elements. By agreement between the manufacturer and purchaser, limits may be established and analysis required for unnamed elements.
- 7.3 Copper, specified as the "remainder," may be taken as For alloys in which copper is listed as "remainder," copper is the difference between the sum of results of all the elements determined and 100 %. When all the elements in Table 1 are determined, the sum of results for each alloy shall be 99.5 % min.
 - 8. tTemper dards. iteh.ai/catalog/standards/sist/800822d7-b7e8-4cb8-ba1b-d60416d35709/astm-b103-b103m-23
 - 8.1 The standard tempers for products described in this specification are given in Table 2.
 - 8.1.1 *M20 (as Hot-Rolled Material)*—The standard temper of sheet and plate produced by hot rolling is designated in Hot rolled temper M20. Table 2.
 - 8.1.2 *H* (*Rolled Material*)—The standard tempers of rolled material are as designated in Cold rolled tempers H02 to H10. Table 2 with prefix "H." Former designations and the standard designations as defined in Classification B601 are shown.

Note 3—The properties of special and nonstandard tempers are subject to agreement between the manufacturer and purchaser.
