About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD.....	10
INTRODUCTION.....	12
1 Scope.....	13
1.1 General.....	13
1.2 Published versions of the standard and related namespace names.....	13
1.3 Identification of the code components.....	14
1.3.1 General.....	14
1.3.2 IEC 61850-6-100 XML namespace.....	14
1.3.3 IEC 61850-7-6 ASD example.....	14
1.4 Code Component distribution.....	15
1.4.1 General.....	15
1.4.2 SCL extension namespace code component.....	15
1.4.3 ASD example code component.....	15
2 Normative references.....	16
3 Terms and definitions.....	16
4 Methodology for profiling.....	18
4.1 General.....	18
4.2 IEC 61850 profiling concept.....	19
4.2.1 General.....	19
4.2.2 IEC 61850 profile definition.....	20
4.3 Basic Application Profiles (BAPs).....	21
4.4 Basic Application Interoperability Profiles (BAIOPs).....	23
4.5 Process from a use case to interoperability on SGAM function layer.....	25
4.6 Managing profiles.....	26
4.7 Implementation of BAPs in real projects.....	26
5 Requirements to describe machine-processable BAP.....	27
5.1 General purpose.....	27
5.2 High-level needs to address.....	28
5.2.1 Elements to be described in a SCL BAP.....	28
5.2.2 Use cases illustration.....	30
5.2.3 Requirements for the engineering process using BAP.....	31
5.2.4 Requirements regarding conformance of files.....	31
6 Methodology to describe BAP in SCL.....	31
6.1 SCL extensions.....	31
6.1.1 General.....	31
6.1.2 Cardinality.....	31
6.1.3 Application.....	33
6.1.4 AllocationRoleRef.....	34
6.1.5 Functional variants.....	35
6.1.6 Function Roles.....	38
6.1.7 Function Reference.....	40
6.1.8 Variable reference.....	43
6.1.9 Behavior description reference.....	44
6.1.10 Process resource reference.....	46
6.1.11 Power system relation reference.....	46
6.1.12 Function category reference.....	47

6.1.13	Interaction between the different elements of a BAP template.....	48
6.2	Engineering process	48
6.2.1	Introducing the .ASD file extension	48
6.2.2	Structure of an ASD.....	48
6.2.3	BAP templates: process and tools	49
6.2.4	Instantiating a BAP application template	52
6.2.5	Actions to perform during the instantiation process	52
6.2.6	Validation of a machine processable BAP	55
6.2.7	Requirements for CDT to deal with namespace conflicts between templates and instances	56
6.2.8	Use of SCL UUID elements for traceability.....	56
6.2.9	Editing an existing system with new or modified applications	57
Annex A (informative) Example for BAP of distributed automation function "reverse blocking" using BAP template		59
A.1	Functional description	59
A.2	Description of use case and associated roles/actors	61
A.2.1	List of roles / actors	61
A.2.2	Use case	61
A.2.3	Sequence diagram of typical interactions.....	62
A.3	Logical architecture.....	63
A.4	Example of SCL BAP representation.....	63
A.5	Allocation variants (conditional)	65
A.6	Functional variants.....	65
A.6.1	Core functional variants.....	65
A.6.2	Noncore functional variants	65
A.7	Performance requirements.....	65
A.7.1	Functional related	65
A.7.2	Service related	66
A.8	Description of data model per actor.....	66
A.8.1	General	66
A.8.2	PTOC for blocked function (infeed bay)	66
A.8.3	PTOC for blocking function 1 to n (outflow bay(s))	68
A.8.4	Monitoring	69
A.9	Communication services	69
A.10	Device related requirements (conditional) – Test behavior	70
A.11	Naming rules	70
A.12	Capabilities for testing	70
Annex B (informative) Example for BAP of "condition monitoring diagnosis functions of on-load tap changer" using BAP template		71
B.1	Functional description	71
B.2	Description of use case and associated roles/actors	73
B.2.1	List of roles / actors	73
B.2.2	Use case	74
B.2.3	Sequence diagram of typical interactions.....	75
B.3	Logical Architecture	78
B.3.1	Overview	78
B.3.2	Monitoring operation property	79
B.3.3	Monitoring operation counts.....	79
B.3.4	Monitoring contact abrasion.....	80

B.3.5	Monitoring LTC oil temperature and flow.....	80
B.3.6	Monitoring operation of oil filter unit.....	81
B.4	Allocation variants (conditional).....	81
B.5	Functional variants.....	81
B.6	Performance requirements.....	81
B.6.1	Functional related.....	81
B.6.2	Service related.....	81
B.7	Description of data model per actor.....	82
B.7.1	General.....	82
B.7.2	SLTC.....	82
B.7.3	YLTC.....	85
B.7.4	TTRQ.....	85
B.7.5	TCTR.....	86
B.7.6	SIML.....	86
B.7.7	TTMP.....	87
B.7.8	KFIL.....	87
B.8	Communication services.....	87
B.9	Device related requirements (conditional).....	87
B.10	Naming rules.....	87
B.11	Capabilities for testing.....	87
Annex C (informative)	Example of BAP of protection function "line distance protection" using BAP template.....	88
C.1	Functional description.....	88
C.2	Description of use case and associated roles/actors.....	88
C.2.1	List of roles / actors.....	88
C.2.2	Use case.....	89
C.2.3	Sequence diagram of typical interactions.....	90
C.3	Logical architecture.....	91
C.4	Allocation variants (conditional).....	91
C.5	Functional variants.....	91
C.5.1	Core functional variants.....	91
C.5.2	Noncore functional variants (different features for testing).....	92
C.6	SCL BAP representation.....	92
C.7	Performance requirements.....	93
C.7.1	Functional related.....	93
C.7.2	Service related.....	93
C.8	Description of data model per actor.....	94
C.9	Communication services.....	96
C.9.1	General.....	96
C.9.2	Variant FA:.....	96
C.9.3	Variant FB:.....	97
C.10	Device related requirements (conditional) – Degraded operation behavior.....	97
C.11	Naming rules.....	98
C.12	Capabilites for testing.....	98
Annex D (informative)	Example of BAIOp for BAP reverse blocking (without process bus).....	99
D.1	General.....	99
D.2	Test description.....	99
D.2.1	General.....	99
D.2.2	Normal sequence of reverse blocking.....	100

D.2.3	Functional description of test environment.....	101
D.2.4	Test reverse blocking – role blocking (without output to process).....	102
D.2.5	Test reverse blocking – role blocked.....	104
Annex E (informative)	Example of BAIOP for BAP of "condition monitoring diagnosis functions of on-load tap changer".....	107
E.1	General.....	107
E.2	Test description	107
E.2.1	Overview	107
E.2.2	Sequence of monitoring the motor drive current value	108
Annex F (informative)	Examples using SCL elements related to BAP.....	110
F.1	General prerequisites for use case understanding.....	110
F.2	BAP1: Creating dataflow between two BAP instances with the use of ProcessResource.....	110
F.2.1	Use case scope	110
F.2.2	Use case implementation.....	110
F.3	BAP2: Using PowerSystemRelation to link functions and applications to conducting equipments	113
F.3.1	Use case scope	113
F.3.2	Usecase Implementation.....	115
F.4	BAP3: Extending an existing substation with a new bay, integrating the new bay in the existing interlocking schema.....	116
F.4.1	Use case scope	116
F.4.2	Use case implementation.....	118
F.5	FV1: Circuit Breaker (CB) application single/three pole operated, with or without auto reclosing command input	120
F.5.1	Use case scope	120
F.5.2	Use case implementation.....	121
F.5.3	Defining and implementing functional variant actions.....	125
F.5.4	Automate the selection of the Functional Variant	128
F.6	FV2 SF6 variant of the CB application.....	129
F.6.1	Use case scope	129
F.6.2	Use case implementation.....	129
F.7	AR1: Definition of allocation roles to define physical allocation possibilities	131
F.7.1	Use case scope	131
F.7.2	Use case implementation.....	132
F.8	AR2: Editing of allocation roles with functional variants.....	133
F.8.1	Use case scope	133
F.8.2	Use case implementation.....	133
F.9	VE1: use of a variable element to edit datamodel naming elements	134
F.9.1	General	134
F.9.2	Use case scope	134
F.10	VE2: use of a variable element to edit common setting values (DirMod on multiple PTOC instances)	136
F.11	CA1: use of cardinality to instantiate function roles (busbar protection application).....	138
F.11.1	Use case scope	138
F.11.2	Use case implementation.....	139
F.12	BD1: Textual behavior descriptions.....	140
F.13	BD2: Graphical behavior descriptions	141
F.14	BD3: IEC61131 format behavior descriptions	141

F.15 ASD file example 142
 Annex G (informative) Concept Definition Tool (CDT) role description 143

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**COMMUNICATION NETWORKS AND SYSTEMS
FOR POWER UTILITY AUTOMATION –****Part 7-6: Guideline for definition of
Basic Application Profiles (BAPs) using IEC 61850**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TR 61850 has been prepared by IEC technical committee 57: Power systems management and associated information exchange. It is a Technical Report.

This second edition cancels and replaces the first edition published in 2019. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) New Clause 5 added to describe the way to express Basic Application Profile in SCL files;
- b) New Annex F and Annex G added to list specific use cases and roles of the Concept Definition Tool.

The text of this Technical Report is based on the following documents:

Draft TR	Report on voting
57/2710/DTR	57/2735/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61850 series, published under the general title *Communication networks and systems for power utility automation*, can be found on the IEC website.

NOTE The following print types are used:

Element and attribute types: in italic type.

This IEC technical report includes Code Components i.e. components that are intended to be directly processed by a computer. In this technical report, the code component includes all specifications of the XSD schema as well as all SCL examples.

The purchase of this IEC technical report carries a copyright license for the purchaser to sell software containing Code Components from this technical report to end users either directly or via distributors, subject to IEC software licensing conditions, which can be found at: <http://www.iec.ch/CCv1>.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The IEC 61850 series of standards offers a broad basis for communication networks and systems in power utility automation. Due to its broad coverage of power utility automation applications, it is up to the standard's user (utility, vendor, system integrator, etc.) to pick and choose specific options from the standard in order to meet the requirements of the intended objective. As a consequence, implementations of IEC 61850 represent specific subsets of the standard.

In the context of standards, the term "profile" is commonly used to describe a subset of an entity (e.g. standard, model, rules).

Accordingly, an IEC 61850 standard profile contains a selection of data models (mandatory elements), applicable communication services and relevant engineering conventions (based on the Substation Configuration Language SCL defined in IEC 61850-6) for an application function of a specific use case in the domain of power utility automation.

Depending on the scope and objective different profile types can be distinguished:

- User profile – defined subset that is valid for a specific user / organization (e.g. utility)
- Product / device profile – implemented subset in a specific vendor product / device
- Domain profile – defined subset for a specific domain and relevant use cases (e.g. monitoring of substation)
- Application / function profile – subset covering a specific application or function (e.g. substation interlocking)

These profile types target the reduction of complexity and facilitation of interoperability for their specific scope and during engineering and device / substation lifetime. In order to achieve both these goals, a properly defined profile and appropriate implementations (processes, tools, products) that support the profile are required.

This Technical Report was first published in 2019, to cover the methodology for profiling Basic Application Profile. The text of the first edition of the Technical Report is based on the following documents:

Draft TR	Report on voting
57/1986/DTR	57/2034/RVDTR

A request for revision of the Technical Report was circulated in 2022, in order to add information about machine processable Basic Application Profiles, described in SCL.

Revision Request	Report on voting
57/2475/DC	57/2493/INF

This document related to the second edition of the Technical Report, prepared, and circulated as a CD in 2023. Clauses 1, 2, 3 and 4 are taken from the first edition of the Technical Report (IEC 61850-7-6:2019) and reproduced here without modifications. A new clause (5) has been added to describe the way to express the Basic Application Profile in SCL files. Specific use cases and roles of the Concept Definition Tool are added in Annex G in relation with this new clause.
