This European Standard was approved by CEN on 1997-03-28. CEN members are bound to compty with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

The text of the International Standard from Technical Committee ISO/TC 38 "Textiles" of the International Organization for Standardization (ISO) has been taken over as an European Standard by Technical Committee CEN/TC 248 "Textiles and textile products", the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 1997, and conflicting national standards shall be withdrawn at the latest by October 1997.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

Endorsement notice

The text of the International Standard ISO 105-J03:1995, including Technical Corrigendum 1:1996 has been approved by CEN as a European Standard without any modification.

ISO 105-J03:1995(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting EVIEW a vote.

International Standard ISO 105-J03 was prepared by Technical Committee ISO/TC 38, Textiles, Subcommittee SC 1, Tests for coloured textiles and colorants.

https://standards.iteh.ai/catalog/standards/sist/62c2d123-3b9b-4404-

This first edition of ISO 105-J03 constitutes a partial revision of the third 3-1999 edition of ISO 105-J01:1989.

ISO 105 was previously published in thirteen "parts", each designated by a letter (e.g. "Part A"), with publication dates between 1978 and 1985. Each part contained a series of "sections", each designated by the respective part letter and a two-digit serial number (e.g. "Section A01"). These sections are now being republished as separate documents, themselves designated "parts" but retaining their earlier alphanumeric designations. A complete list of these parts is given in ISO 105-A01.

Annexes A, B and C of this part of ISO 105 are for information only.

Part J03:

Calculation of colour differences

1 Scope

NOTE 1 Annex A gives guidance on the interpretation of results. Annex B provides sample test data for use in checking computer programs. Annex C contains a sample computer program for calculating colour difference.

b819-35aaa92522bd/sist-en-iso-105-j03-1999

2 Principle

The CIE¹⁾ 1976 $L^*a^*b^*$ (CIELAB) colour space has been modified to enhance its visual uniformity when calculating the colour difference between two specimens. The modifications to CIELAB by the CMC equation provide a numerical value, $\Delta E_{\rm cmc}$, which describes the colour difference between a sample and a reference in a more nearly uniform colour space. This permits the use of a single-number tolerance ("acceptability tolerance" or "pass/fail tolerance") for judging the acceptability of a colour match in which the tolerance is independent of the colour of the reference. The ellipsoid semi-axes (lS_L , cS_C and S_H) used to derive $\Delta E_{\rm cmc}$ provide a means to interpret the three separate components of colour difference (lightness, chroma and hue) in manners suitable for a wide range of uses.

The equation for $\Delta E_{\rm cmc}$ describes an ellipsoidal boundary (with axes in the directions of lightness, chroma and hue) centred about a reference. The agreed-upon $\Delta E_{\rm cmc}$ acceptability tolerance describes a volume within which all specimens are acceptable matches to the reference.

The colour difference is composed of three components that comprise the differences between the reference and the specimen. These are:

- a) a **lightness** component that is weighted by the lightness tolerance $(\Delta L^{\bullet}/lS_{L})$. This is represented as $\Delta L_{\rm cmc}$.

 If the $\Delta L_{\rm cmc}$ is positive, the specimen is lighter than the reference. If the $\Delta L_{\rm cmc}$ is negative, the specimen is darker than the reference;
- b) a **chroma** component that is weighted by the chroma tolerance $(\Delta C^*_{ab}/cS_c)$. This is represented as ΔC_{cmc} .

¹⁾ Commission Internationale d'Éclairage, Central Bureau, Kegelgasse 27, A-1030, Vienna, Austria.

ISO 105-J03:1995(E) © ISO

If the $\Delta C_{\rm cmc}$ is positive, the specimen is more chromatic than the reference. If the $\Delta C_{\rm cmc}$ is negative, the specimen is less chromatic than the reference;

c) a **hue** component that is weighted by the hue tolerance $(\Delta H^*_{ab}/S_H)$. This is represented as ΔH_{cmc} .

If the $\Delta H_{\rm cmc}$ is positive, the hue difference of the specimen is anti-clockwise from the reference in the CIELAB a^* , b^* diagram. If the $\Delta H_{\rm cmc}$ is negative, the hue difference of the specimen is clockwise from the reference in the CIELAB a^* , b^* diagram.

3 Procedure

3.1 Calculation of CIELAB values

Calculate the CIELAB L^* , a^* , b^* , C^*_{ab} , h_{ab} values from the X, Y, Z tristimulus values for both the reference and specimen as follows:

$$L^* = 116(Y/Y_n)^{1/3} - 16 \text{ if } Y/Y_n > 0,008 856$$

or

$$L^{\bullet} = 903,3(Y/Y_n)$$
 if $Y/Y_n \le 0,008856$; STANDARD PREVIEW

$$a^* = 500[f(X/X_n) - f(Y/Y_n)];$$

(standards.iteh.ai)

$$b^* = 200[f(Y/Y_n) - f(Z/Z_n)]$$

SIST EN ISO 105-J03:1999

https://standards.iteh.ai/catalog/standards/sist/62c2d123-3b9b-4404-b819-35aaa92522bd/sist-en-iso-105-j03-1999

$$f(X/X_n) = (X/X_n)^{1/3}$$
 if $X/X_n > 0.008$ 856

or

where

$$f(X/X_n) = 7.787(X/X_n) + 16/116 \text{ if } X/X_n \le 0.008 856;$$

$$f(Y/Y_n) = (Y/Y_n)^{1/3}$$
 if $Y/Y_n > 0.008$ 856

or

$$f(Y/Y_n) = 7.787(Y/Y_n) + 16/116 \text{ if } Y/Y_n \le 0.008 856;$$

$$f(Z/Z_n) = (Z/Z_n)^{1/3}$$
 if $Z/Z_n > 0.008$ 856

or

$$f(Z|Z_n) = 7.787(Z|Z_n) + 16/116 \text{ if } Z|Z_n \le 0.008 856;$$

$$C_{ab}^* = (a^{*2} + b^{*2})^{1/2};$$

 h_{ab} = arctan (b^*/a^*) expressed on a 0° to 360° scale with the a^* positive axis being 0° and the b^* positive axis at 90°.

For these equations, X_n , Y_n and Z_n are the tristimulus values of the illuminant/observer combination in which it is desired to calculate CMC(l:c) colour differences. The preferred illuminant/observer combination is D₆₅/10°. Table 1 gives the values for this and five other combinations.

Table 1 — Tristimulus values for six illuminant/observer combinations

Illuminant/observer combinations	Tristimulus values		
	X_n	Y_n	Z_n
D ₆₅ /10°	94,811	100,00	107,304
D ₆₅ /2°	95,047	100,00	108,883
C/10°	97,285	100,00	116,145
C/2°	98,074	100,00	118,232
A/10°	111,144	100,00	35,200
A/2°	109,850	100,00	35,585

3.2 Calculation of CIELAB colour differences values

Calculate the CIELAB colour differences ΔL^* , Δa^* , Δb^* , ΔC^*_{ab} , ΔE^*_{ab} , ΔH^*_{ab} using the following equations, in which the subscripts R and S refer respectively to the reference and specimen CIELAB values:

$$\Delta L^* = L^*_{S} - L^*_{R};$$

$$\Delta a^* = a^*_{S} - a^*_{R};$$

$$\Delta b^* = b^*_{S} - b^*_{R};$$

$$\Delta C^*_{ab} = C^*_{ab,S} - C^*_{ab,R};$$

$$\Delta E^*_{ab} = \left[(\Delta L^*)^2 + (\Delta a^*)^2 + (\Delta b^*)^2 \right]^{1/2}.$$

$$\Delta H^*_{ab} = pq \left[(\Delta E^*_{ab})^2 - (\Delta L^*)^2 - (\Delta C^*_{ab})^2 \right]^{1/2}.$$

$$p = 1$$
 if $m \ge 0$

or

$$p = -1 \text{ if } m < 0$$

and
$$q = 1$$
 if $|m| \leq 180$

or

$$q = -1 \text{ if } |m| > 180$$

where
$$m = h_{ab,S} - h_{ab,R}$$

in which |...| indicates that the *positive* value is to be used regardless of the sign of the expression between the two lines.

or the equivalent

$$\Delta H_{ab}^* = t[2(C_{ab,S}^*C_{ab,R}^* - a_S^*a_R^* - b_S^*b_R^*)]^{1/2}$$

where

$$t = 1 \text{ if } a_{S}^{*} b_{B}^{*} \leq a_{B}^{*} b_{S}^{*}$$

or

$$t = -1 \text{ if } a^* {}_{S} b^* {}_{B} > a^* {}_{B} b^* {}_{S}$$
