Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by VIEW the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting. standards.iteh.ai)

International Standard ISO 5836 was prepared by Technical Committee ISO/TC 150, Implants for surgery. ISO 5836:1988

https://standards.iteh.ai/catalog/standards/sist/f6e97e33-8138-4b5e-8394-

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.

Implants for surgery — Metal bone plates — Holes corresponding to screws with asymmetrical thread and spherical under-surface

iTeh STANDARD PREVIEW (standards.iteh.ai)

1 Scope and field of application This International Standard Stan

NOTES

1 This International Standard does not deal with the shape and dimensions of the plates or with the spacing (centre-to-centre distance) of the holes.

2 Reference

ISO 5835, Implants for surgery — Metal bone screws with hexagonal drive connection — Spherical under-surface of head — Dimensions.¹⁾

¹⁾ At present at the stage of draft.

ISO 5836 : 1988 (E)

3 Dimensions and tolerances

3.1 Type A (with cylindrical hole)

Type A holes shall be as given in figure 1 and table 1.

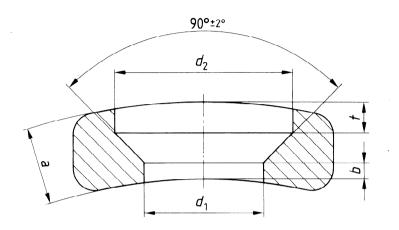

Figure 1 – Type A hole iTeh STANDARD PREVIEW (standards.iteh.ai)

 Table 1 – Dimensions of type A hole

 ISO 5836:1988

Dimensions in millimetres

	https://standards.ltccytinaridagoancorrecountersinkep3-8138-4b5e-8394- 2025(dependent/ign-g)836-1988					
$d_1 + 0,2$	$d_2 + 0,2$	b	t O	<i>a</i> ref.	Screws in accordance with ISO 5835	
0 1,6	0 3,1	min. 0,15	-0,2	1.0		
1,9	3,2	0,25	- 0,4	1,3	HA 1,5	
2,1	4,1	0,1	0,4	1,5	HA 2	
2,6	4,3	0,25			· · · · • •	
2,9	5,2	0,15	0,6	1,9	HA 2,7	
3,4 3,7	5,4 6,2	0,3			HA 3,5	
4,2	6,2	0,25	0,9	2,4	HA 3,5; HA 4; HB 4	
4,7		0,35		3,5	HA 4,5	
5,5	- 8,2	0,75	1,4			
5,2		0,6			HA 5	
6	8,2	1	1,4	3,5		
6,6		1,3			HB 6,5	

NOTE — The values *b* and *t* in table 1 relate to plates of thickness a_{ref} . If the thickness of the plate is greater than a_{ref} , the value of *t* shall not exceed that shown in table 1 so as not to weaken the plate. The value of *b* would then be increased. If the thickness of the plate is less than a_{ref} , the value of *b* shall not be less than is shown in table 1 so as to prevent protrusion of the head of the screw through the plate. The value of *t* would then be reduced and may reach zero.

The formulae below present the above statements in mathematical terms :

 $\begin{array}{ll} \text{if } a \, > \, a_{\text{ref}} & t \, = \, t_1 \\ \text{if } a \, < \, a_{\text{ref}} & t \, = \, t_1 \, - \, (a_{\text{ref}} \, - \, a) \\ \text{if } a \, < \, a_{\text{ref}} & b \, = \, b_1 \end{array}$

$$if a > a_{ref} \qquad b = b_1 + (a - a_{ref})$$

where a_{ref} , t_1 and b_1 are the values of a, b and t in table 1.

3.2 Type B (with conical hole)

Type B holes shall be as given in figure 2.

4,7 ¹⁾ 5,5 ¹⁾	- 4	0,4	0,5	HA 4,5 HB 6,5
5,2 ¹⁾ 5,9 ¹⁾	- 4	0,4	0,5	HA 4,5; HA 5 HB 6,5
6,6 ²⁾	4	0,4	0,5	HB 6,5

Table 3 - Dimensions of types D1, D2 and D3 holes

1) Diameter d_1 may be threaded for the passage of an HB 6,5 screw.

2) This value should be used only in exceptional cases.

Annex A

Interrelationship of International Standards dealing with bone screws, bone plates and relevant tools

(This annex does not form an integral part of the Standard.)

It has been decided that the set of International Standards dealing with bone screws, bone plates and relevant tools should be divided into two parallel series. The basis of the division into two series is the essentially different designs of the screw threads of the bone screws (HA and HB type screws as opposed to HC and HD type screws).

A simplified schematic guide illustrating the interrelationship between screws, plates and tools covered by the two parallel series of International Standards is given below.

Annex B

Bibliography: International Standards referred to in table of annex A

(This annex does not form an integral part of the Standard.)

ISO 5835 : -1, Implants for surgery — Metal bone screws with hexagonal drive connection — Spherical under-surface of head — Dimensions.

ISO 5836 : -2^{0} , Implants for surgery — Metal bone plates — Holes corresponding to screws with asymmetrical thread and spherical under-surface.

ISO 6475 : -3^{3} , Implants for surgery — Metal bone screws with asymmetrical thread and spherical under-surface — Mechanical requirements and test methods.

ISO 8319-1 : 1986, Orthopaedic instruments — Drive connections — Part 1 : Keys for use with screws with hexagon socket heads.

ISO 8319-2 : 1986, Orthopaedic instruments — Drive connections — Part 2 : Screwdrivers for single slot head screws, screws with cruciate slot and cross-recessed head screws.

ISO 9268 : -2^{2} , Implants for surgery – Metal bone screws with conical under-surface of head – Dimensions.

ISO 9269 : 1988, Implants for surgery — Metal bone plates — Holes and slots corresponding to screws with conical under-surface.

ISO 9585 : -2° , Implants for surgery – Method for testing bending strength and stiffness of bone plates.

ISO 9714-1 : -2° , Orthopaedic instruments **D** Drilling instruments **Part 1**. drill bits, taps and countersink cutters.
