## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

All published ETSI deliverables shall include information which directs the reader to the above source of information.

---

## Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Services and Protocols for Advanced Networks (SPAN).

The present document is part 2 of a multi-part deliverable. Full details of the entire series can be found in part 1 [3].

<b>National transposition dates</b>	
Date of adoption of this EN:	27 December 2002
Date of latest announcement of this EN (doa):	31 March 2003
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	30 September 2003
Date of withdrawal of any conflicting National Standard (dow):	30 September 2003

---

## 1 Scope

The present document contains the Abstract Test Suite (ATS) and Partial PIXIT for Call Party Handling (CPH), part of CoreINAP CS-3.

The present document provides the Abstract Test Suite (ATS) and Partial PIXIT for the testing of the Call Party Handling (CPH) operations of the Service Switching Function (SSF), defined for the Intelligent Network Application Protocol (INAP) of Intelligent Network (IN) Capability Set 3 (CS3) according to ETSI EN 301 931-1 [1] and ETSI EN 301 931-2 [2].

Annex A provides the Tree and Tabular Combined Notation (TTCN).

Annex B provides the Partial Protocol Implementation eXtra Information for Testing (PIXIT) Proforma.

Annex C provides the Protocol Conformance Test Report (PCTR) Proforma.

The present document is completed by other parts constituting the testing of the CS3 Core INAP specifications: ETSI EN 301 934-1 [3] (Basic capability set of CS-3).

ISO/IEC 9646-1 [4] and ISO/IEC 9646-2 [5] are used as the basis for the testing methodology.

---

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions defined in ETSI EN 301 931-1 [1], ISO/IEC 9646-1 [4] and ISO/IEC 9646-2 [5] apply.

### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ASP	Abstract Service Primitive
ATM	Abstract Test Method
ATS	Abstract Test Suite
BI	Invalid Behaviour tests
BO	Inopportune Behaviour tests
BV	Valid Behaviour tests
CS	Call Segment
CS	Capability Set
IN	Intelligent Network
INAP	Intelligent Network Application Protocol
IP	Intelligent Peripheral
IUT	Implementation Under Test
LE	Local Exchange
LT	Lower Tester
MPyT	Multy Party Testing
MSC	Message Sequence Chart
NWK	NetWork Layer
PCO	Point of Control and Observation
PDU	Protocol Data Unit
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation eXtra Information for Testing
SAP	Service Access Point
SCF	Service Control Function
SCP	Service Control Point
SDF	Service Data Function
SDL	Specification and Description Language
SRF	Specialized Resource Function
SSF	Service Switching Function
SSP	Service Switching Point
SUT	System Under Test
TC	Test Case
TCAP	Transaction Capabilities Application Part
TE	Transit Exchange
TP	Test Purpose
TSS	Test Suite Structure
TTCN	Tree and Tabular Combined Notation

## 4 Test architecture

### 4.1 Abstract Test Method (ATM)

This clause describes the ATM used for testing the INAP protocol. It is the embedded variant of the remote test method used in Multy Party Testing (MPyT) context, as defined in ISO/IEC 9646-2 [5].

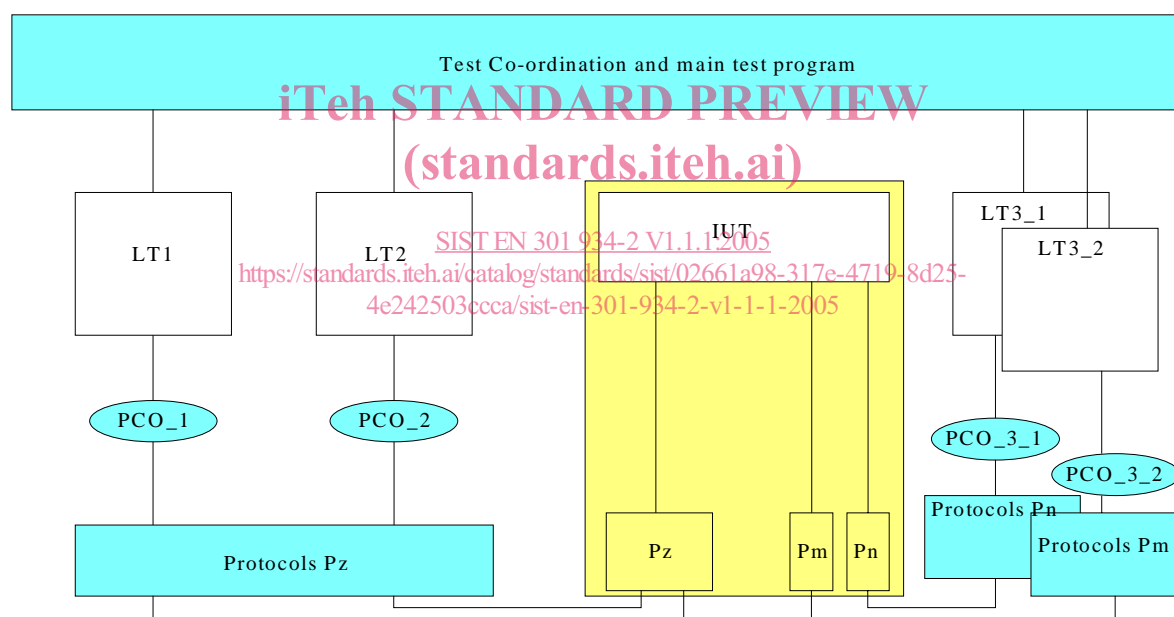

This test method has been selected, because:

- this test method implies no specific requirements from the Implementation Under Test (IUT);
- the upper Service Access Point (SAP) of the IUT cannot be directly observed;
- this test method places minimum limitations in the realization of conformance testing.

### 4.2 Overall configuration

Figure 1 describes the test architecture which will be used for the definition of the ATS.

A single test architecture covers all testing configuration requirements.

**Figure 1: Multi-party, single-layer testing context: one IUT and 4 types of LTs**

Figure 1 shows the multi-party, single layer testing context. The same architecture can be used for testing several interfaces. The roles of IUT and LTs change according to the protocol to be tested in the IUT.

Table 1 gives the nature of the IUT and LTs according to the protocol under test.

**Table 1: possible testing configurations**

Test Config	Tested Interface	IUT	LT1	LT2	LT3_1	LT3_2	Functional Configuration
1	SSF-SCF	SSF	SCF	SRF	Sig con A	Sig con B	A
2	SSF-SCF	SSF	SCF	-	Sig con A	Sig con B	B

## 4.3 Test of SSF-SCF interface using INAP

The test program contains the program of the main LT1 main tester as well as the co-ordination points to co-ordinate the tasks with the other testers LT2 and LT3.

**IUT:** Is the SSF-INAP.

**LT1:** Test program is the SCF.

**LT2:** Test program is the SRF-INAP when required.

**LT3:** Informal test program for actions and observation at the signalling control points, to play the role of end users A, B and C for instance.

There are as many LT3 as required by the test configuration (LT3\_1, LT3\_2, etc.) according to the number of end users A, B and C involved in a service scenario for instance, using different types of protocols).

**Pz:** Contains the protocols used below the INAP between SCP and SSP, also between SSP and SRF. They could be e.g. TCAP, SCCP and MTP of SS7 etc.

**Pm:** Contains the protocols used below the LT3\_1 between the IUT and the Signalling control point. It could be the DSS1 protocols or ISUP SS7 protocol (in the case of having a transit exchange).

**Pn:** Contains the used protocols below the LT3\_2 between the IUT and the Signalling control point. It could be the DSS1 protocols or ISUP SS7 protocol (in the case of having a transit exchange).

## 4.4 Points of control and observation (PCOs)

PCO-Declarations.

- 1) **PCO\_1:** This PCO is at the core INAP interface between SSP and SCP. The lower layer protocol is Pz. It could be e.g. TCAP.
- 2) **PCO\_2:** This PCO is at the core INAP interface between SSP and SRF. The lower layer protocol is Pz. It could be e.g. TCAP, ISUP, B-ISUP, TUP or the NWK of DSS1.
- 3) **PCO\_3\_1:** This PCO is at the interface between SSP and Signalling Control A. The lower layer protocol is Pm. It could be e.g. ISUP, B-ISUP, TUP or the NWK of DSS1.
- 4) **PCO\_3\_2:** This PCO is at the interface between SSP and Signalling Control B. The lower layer protocol is Pn. It could be e.g. ISUP, B-ISUP, TUP or the NWK of DSS1.

## 4.5 Test system

It is expected that the test system supports the protocols Pz, Pz-1, Pz-2 and the protocols for Pm and Pn.

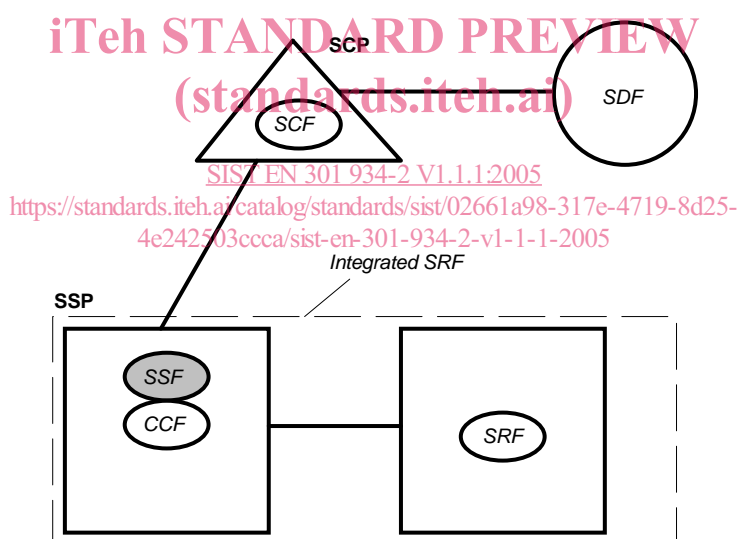

It is expected that the test system supports the PCO Requirements of PCO\_1, PCO\_2, PCO\_3\_1 to PCO\_3\_n.

## 4.6 Functional configurations

### 4.6.1 SSF-SCF interface

**Figure 2: SCP with single SSP**  
**Configuration A: IUT = SSF (non integrated with SRF)**

**Figure 3: SCP with single SSP**  
**Configuration B: IUT = SSF (integrated with SRF)**
