## EUROPEAN STANDARD

### EN 61897

## NORME EUROPÉENNE EUROPÄISCHE NORM

October 1998

ICS 29,240,20

Descriptors: Overhead electrical line, electrical conductor, damping, vibration, requirement, design, quality assurance,

classification, test, effectiveness, visual examination, protection against corrosion, non-destructive test, verification

of dimension, mechanical test, fatigue test

English version

Overhead lines - Requirements and tests for Stockbridge type aeolian vibration dampers

(IEC 61897:1998)

Lignes aériennes - Exigences et essais applicables aux amortisseurs de vibrations éoliennes Stockbridge (CEI 61897:1998)

Freileitungen Anforderungen und Prüfungen für Schwingungsdämpfer Typ Stockbridge (IEC 61897:1998)

This European Standard was approved by CENELEC on 1998-10-01. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

#### Foreword

The text of document 11/140/FDIS, future edition 1 of IEC 61897, prepared by IEC TC 11, Overhead lines, was submitted to the IEC-CENELEC parallel vote and was approved by CENELEC as EN 61897 on 1998-10-01.

1999-07-01

(dow) 2001-07-01

(dop)

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement
- latest date by which the national standards conflicting with the EN have to be withdrawn

Annexes designated "normative" are part of the body of the standard.

Annexes designated "informative" are given for information only.

In this standard, annexes A, C and ZA are normative and annex B is informative.

Annex ZA has been added by CENELEC.

#### **Endorsement notice**

The text of the International Standard IEC 61897:1998 was approved by CENELEC as a European Standard without any modification.

### Annex ZA (normative)

## Normative references to international publications with their corresponding European publications

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

NOTE: When an international publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

### INTERNATIONAL ELECTROTECHNICAL COMMISSION

# OVERHEAD LINES – REQUIREMENTS AND TESTS FOR STOCKBRIDGE TYPE AEOLIAN VIBRATION DAMPERS

### **FOREWORD**

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
- 5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards?-1999
- 6) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61897 has been prepared by IEC technical committee 11: Overhead lines

The text of this standard is based on the following documents:

FDIS	Report on voting	
11/140/FDIS	11/142/RVD	

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

Annexes A and C form an integral part of this standard.

Annex B is for information only.

# OVERHEAD LINES – REQUIREMENTS AND TESTS FOR STOCKBRIDGE TYPE AEOLIAN VIBRATION DAMPERS

### 1 Scope

This International Standard applies to Stockbridge type aeolian vibration dampers intended for single conductors or earth wires or conductor bundles where dampers are directly attached to each subconductor.

The purchaser may adopt part(s) of this standard when specifying requirements for other types of aeolian vibration dampers or for Stockbridge dampers used on conductors or cables different from those mentioned above (e.g. optical ground wires, all dielectric self-supporting optical cables).

In many cases, test procedures and test values are left to agreement between the purchaser and the supplier and are stated in the procurement contract.

Annex A lists the minimum technical details to be agreed between purchaser and supplier.

Throughout this standard, the word "conductor" is used when the test applies to Stockbridge dampers for conductors or earth wires ndards.iteh.ai)

### 2 Normative references

SIST EN 61897:1999

https://standards.iteh.ai/catalog/standards/sist/af072838-b553-4bdd-8f64-

The following normative documents contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All normative documents are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

IEC 60050(466):1990, International Electrotechnical Vocabulary (IEV) – Chapter 466: Overhead lines

IEC 61284:1997, Overhead lines – Requirements and tests for fittings

IEC 60888:1987, Zinc-coated steel wires for stranded conductors

ISO 1461, — Hot dip galvanized coatings on fabricated ferrous products – Specifications 1)

ISO 2859-1:1989, Sampling procedures for inspection by attributes – Part 1: Sampling plans indexed by acceptable quality level (AQL) for lot-by-lot inspection
