IEC 61499-1:2005(E)

## Publication numbering

As from 1 January 1997 all IEC publications are issued with a designation in the 60000 series. For example, IEC 34-1 is now referred to as IEC 60034-1.

## Consolidated editions

The IEC is now publishing consolidated versions of its publications. For example, edition numbers 1.0, 1.1 and 1.2 refer, respectively, to the base publication, the base publication incorporating amendment 1 and the base publication incorporating amendments 1 and 2.

## Further information on IEC publications

The technical content of IEC publications is kept under constant review by the IEC, thus ensuring that the content reflects current technology. Information relating to this publication, including its validity, is available in the IEC Catalogue of publications (see below) in addition to new editions, amendments and corrigenda. Information on the subjects under consideration and work in progress undertaken by the technical committee which has prepared this publication, as well as the list of publications issued, is also available from the following:

- **IEC Web Site** ([www.iec.ch](http://www.iec.ch))

- **Catalogue of IEC publications**

The on-line catalogue on the IEC web site ([www.iec.ch/searchpub](http://www.iec.ch/searchpub)) enables you to search by a variety of criteria including text searches, technical committees and date of publication. On-line information is also available on recently issued publications, withdrawn and replaced publications, as well as corrigenda.

- **IEC Just Published**

This summary of recently issued publications ([www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)) is also available by email. Please contact the Customer Service Centre (see below) for further information.

- **Customer Service Centre**

If you have any questions regarding this publication or need further assistance, please contact the Customer Service Centre:

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

## FUNCTION BLOCKS –

## Part 1: Architecture

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61499-1 has been prepared by IEC technical committee 65: Industrial-process measurement and control.

This standard cancels and replaces IEC/PAS 61499-1 published in 2000. This first edition constitutes a technical revision.

The following major technical changes have occurred between the PAS edition and this edition:

- a) Syntax for network segments, links and parameters has been added in Clause B.3 to correspond to the system model of 4.1.
- b) Syntax for parameters instead of constant data connections has been included for parameterization of function blocks, devices and resources in Clauses B.2 and B.3 for better consistency with IEC 61131-3.
- c) The execution control model of 5.2.2.2 has been simplified and updated for consistency with modern models of state machine control.

The text of this standard is based on the following documents:

CDV	Report on voting
65/338/CDV	65/346/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

IEC 61499 consists of the following parts, under the general title *Function blocks*:

Part 1: Architecture

Part 2: Software tool requirements

Part 3: Tutorial information

Part 4: Rules for compliance profiles <sup>1</sup>

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

A bilingual version of this standard may be issued at a later date.

---

<sup>1</sup> Under consideration.

## INTRODUCTION

The IEC 61499 series consists of four Parts:

d) Part 1 (this part of IEC 61499) contains:

- general requirements, including scope, normative references, definitions, and reference models;
- rules for the declaration of *function block types*, and rules for the behavior of *instances* of the types so declared;
- rules for the use of function blocks in the *configuration* of distributed Industrial-Process Measurement and Control Systems (IPMCSs);
- rules for the use of function blocks in meeting the communication requirements of distributed IPMCSs;
- rules for the use of function blocks in the management of *applications, resources* and *devices* in distributed IPMCSs.

e) Part 2 defines requirements for *software tools* to support the following systems engineering tasks enumerated in Clause 1 of this part of IEC 61499:

- the specification of function block types;
- the functional specification of resource types and device types;
- the specification, analysis, and validation of distributed IPMCSs;
- the *configuration, implementation, operation, and maintenance* of distributed IPMCSs;
- the exchange of *information among software tools*.

f) Part 3 has the purpose of increasing the understanding, acceptance, and both generic and domain-specific applicability of IPMCS architectures and software tools meeting the requirements of the other Parts, by providing:

- answers to Frequently Asked Questions (FAQs) regarding the IEC 61499 series;
- examples of the use of IEC 61499 constructs to solve frequently encountered problems in control and automation engineering.

g) Part 4 defines rules for the development of *compliance profiles* which specify the features of IEC 61499-1 and IEC 61499-2 to be implemented in order to promote the following attributes of IEC 61499-based systems, devices and software tools:

- interoperability of devices from multiple suppliers;
- portability of software between software tools of multiple suppliers; and
- configurability of devices from multiple vendors by software tools of multiple suppliers.

## FUNCTION BLOCKS –

### Part 1: Architecture

#### 1 Scope

This part of IEC 61499 defines a generic architecture and presents guidelines for the use of *function blocks* in distributed Industrial-Process Measurement and Control Systems (IPMCSs). This architecture is presented in terms of implementable reference *models*, textual syntax and graphical representations. These models, representations and syntax can be used for:

- the specification and standardization of *function block types*;
- the functional specification and standardization of system elements;
- the implementation independent specification, analysis, and validation of distributed IPMCSs;
- the *configuration, implementation, operation, and maintenance* of distributed IPMCSs;
- the exchange of *information among software tools* for the performance of the above *functions*.

NOTE 1 This part of IEC 61499 does not restrict or specify the functional capabilities of IPMCSs or their system elements, except as such capabilities are represented using the elements defined herein. IEC 61499-4 addresses the extent to which the elements defined in this part of IEC 61499 may be restricted by the functional capabilities of compliant systems, subsystems, and devices.

Part of the purpose of this part of IEC 61499 is to provide reference models for the use of function blocks in other standards dealing with the support of the system life cycle, including system planning, design, implementation, validation, operation and maintenance. The models given in this part of IEC 61499 are intended to be generic, domain independent and extensible to the definition and use of function blocks in other standards or for particular applications or application domains. It is intended that specifications written according to the rules given in this part of IEC 61499 be concise, implementable, complete, unambiguous, and consistent.

NOTE 2 The provisions of this part of IEC 61499 alone are not sufficient to ensure interoperability among devices of different vendors. Standards complying with this part of IEC 61499 may specify additional provisions to ensure such interoperability.

NOTE 3 Standards complying with this part of IEC 61499 may specify additional provisions to enable the performance of *system, device, resource and application management functions*.

#### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in the ISO/AFNOR *Dictionary of computer science*, as well as the following apply.

NOTE Terms defined in this clause are *italicized* where they appear in the bodies of definitions.

#### 3.1

##### **acceptor**

*function block instance* which provides a *socket adapter* of a defined *adapter interface type*

#### 3.2

##### **access path**

association of a symbolic name with a *variable* for the purpose of open communication

#### 3.3

##### **adapter connection**

*connection* from a *plug adapter* to a *socket adapter* of the same *adapter interface type*, which carries the flows of *data* and *events* defined by the adapter interface type

#### 3.4

##### **adapter interface type**

*type* which consists of the definition of a set of *event inputs*, *event outputs*, *data inputs*, and *data outputs*, and whose *instances* are *plug adapters* and *socket adapters*

#### 3.5

##### **algorithm**

finite set of well-defined rules for the solution of a problem in a finite number of *operations*

#### 3.6

##### **application**

*software functional unit* that is specific to the solution of a problem in industrial-process measurement and control

NOTE An application may be distributed among *resources*, and may communicate with other applications.

#### 3.7

##### **attribute**

property or characteristic of an *entity*, for instance, the version identifier of a *function block type* specification

#### 3.8

##### **basic function block type**

*function block type* that cannot be decomposed into other function blocks and that utilizes an *execution control chart (ECC)* to control the *execution* of its *algorithms*

### 3.9

#### **bidirectional transaction**

*transaction* in which a request and possibly *data* are conveyed from an *requester* to a *responder*, and in which a response and possibly data are conveyed from the responder back to the requester

### 3.10

#### **character**

member of a set of elements that is used for the representation, organization, or control of *data*

[ISO/AFNOR: 1989]

### 3.11

#### **communication connection**

*connection* that utilizes the "communication mapping function" of one or more *resources* for the conveyance of *information*

### 3.12

#### **communication function block**

*service interface function block* that represents the *interface* between an *application* and the "communication mapping function" of a *resource*

### 3.13

#### **communication function block type**

*function block type* whose *instances* are *communication function blocks*

### 3.14

#### **component function block**

*function block instance* which is used in the specification of an *algorithm* of a *composite function block type*

NOTE A component function block can be of *basic*, *composite* or *service interface type*.

### 3.15

#### **component subapplication**

*subapplication instance* that is used in the specification of a *subapplication type*

### 3.16

#### **composite function block type**

*function block type* whose *algorithms* and the control of their *execution* are expressed entirely in terms of interconnected *component function blocks*, *events*, and *variables*

### 3.17

#### **concurrent**

pertaining to *algorithms* that are *executed* during a common period of time during which they may have to alternately share common *resources*

### 3.18

#### **configuration (of a system or device)**

selecting *functional units*, assigning their locations and defining their interconnections

### 3.19

#### **configuration (of a programmable controller system)**

language element corresponding to a *programmable controller system* as defined in IEC 61131-1

**3.20****configuration parameter**

*parameter* related to the *configuration* of a *system*, *device* or *resource*

**3.21****confirm primitive**

*service primitive* which represents an interaction in which a *resource* indicates completion of some *algorithm* previously *invoked* by an interaction represented by a *request primitive*

**3.22****connection**

association established between *functional units* for conveying *information*

[ISO/AFNOR: 1989]

**3.23****critical region**

*operation* or sequence of operations which is *executed* under the exclusive control of a locking object which is associated with the *data* on which the operations are performed

**3.24****data**

reinterpretable representation of *information* in a formalized manner suitable for communication, interpretation or processing

[ISO 2382-01.01.02]

**3.25****data connection**

association between two *function blocks* for the conveyance of *data*

**3.26****data input**

*interface* of a *function block* which receives *data* from a *data connection*

**3.27****data output**

*interface* of a *function block* which supplies *data* to a *data connection*

**3.28****data type**

set of values together with a set of permitted *operations*

[ISO 2382-15.04.01]

**3.29****declaration**

mechanism for establishing the definition of an *entity*

NOTE A declaration may involve attaching an *identifier* to the entity, and allocating *attributes* such as *data types* and *algorithms* to it.

**3.30****device**

independent physical *entity* capable of performing one or more specified *functions* in a particular context and delimited by its *interfaces*

NOTE A *programmable controller system* as defined in IEC 61131-1 is a *device*.

**3.31**

**device management application**

*application* whose primary function is the management of a multiple *resources* within a *device*

**3.32**

**entity**

particular thing, such as a person, place, *process*, object, concept, association, or *event*

**3.33**

**event**

instantaneous occurrence that is significant to scheduling the *execution* of an *algorithm*

NOTE The execution of an algorithm may make use of *variables* associated with an event.

**3.34**

**event connection**

association among *function blocks* for the conveyance of *events*

**3.35**

**event input**

*interface* of a *function block* which can receive *events* from an *event connection*

**3.36**

**event output**

*interface* of a *function block* which can issue *events* to an *event connection*

**3.37**

**exception**

*event* that causes suspension of normal *execution*

**3.38**

**execution**

process of carrying out a sequence of *operations* specified by an *algorithm*

NOTE The sequence of operations to be executed may vary from one *invocation* of a *function block instance* to another, depending on the rules specified by the function block's *algorithm* and the current values of *variables* in the function block's data structure.

**3.39**

**Execution Control action**

**EC action**

element associated with an *execution control state*, which identifies an *algorithm* to be *executed* and an *event* to be issued on completion of execution of the algorithm

**3.40**

**Execution Control Chart**

**ECC**

graphical or textual representation of the causal relationships among *events* at the *event inputs* and *event outputs* of a *function block* and the *execution* of the function block's *algorithms*, using *execution control states*, *execution control transitions*, and *execution control actions*

**3.41**

**Execution Control initial state**

**EC initial state**

*execution control state* that is active upon initialization of an *execution control chart*
