## UVOD

Predstandard SIST ENV 1991-2-1 (sl,(en)), Eurocode 1: Osnove projektiranja in vplivi na konstrukcije - Del 2-1: Vplivi na konstrukcije - Gostote, lastna teža in koristne obtežbe, prva izdaja, 1998, ima status slovenskega predstandarda in je z metodo platnice prevzet evropski predstandard ENV 1991-2-1, Eurocode 1: Basis of design and actions on structures - Part 2-1: Actions on structures - Densities, self-weight and imposed loads, 1995, v angleškem jeziku.

## NACIONALNI PREGOVOR

Evropski predstandard ENV 1991-2-1:1995 je pripravil tehnični odbor Evropske organizacije za standardizacijo CEN/TC 250 Konstrukcije, pododbor SC 1 Osnove projektiranja in vplivi na konstrukcije.

Odločitev za prevzem predstandarda po metodi platnice je sprejela delovna skupina USM/TC KON/WG 1 Osnove projektiranja, ki je pripravila tudi nacionalni dokument za uporabo v Sloveniji, potrdil pa tehnični odbor USM/TC KON Konstrukcije.

Ta slovenski predstandard je dne 1997-01-10 odobril direktor USM.

Rok veljavnosti tega predstandarda je tri leta od njegove izdaje oziroma do izdaje slovenskega standarda SIST EN 1991-2-1.

## ZVEZE S STANDARDI

Ta predstandard se uporablja v povezavi z naslednjimi predstandardi:

|                        |  |
|------------------------|--|

Navedeni so nekateri standardi, ki so že objavljeni kot ENV, večinoma pa so v pripravi in bodo kot ENV predvidoma objavljeni v času veljavnosti tega predstandarda.

#### OSNOVA ZA IZDAJO STANDARDARDA

- Prevzem predstandarda ENV 1991-2-1:1995

#### OPOMBI

- Povsod, kjer se v besedilu predstandarda uporablja izraz "evropski predstandard", v SIST ENV 1991-2-1:1998 to pomeni "slovenski predstandard".
- Uvod in nacionalni predgovor nista sestavni del predstandarda.

This European Prestandard (ENV) was approved by CEN on 1993-06-30 as a prospective standard for provisional application. The period of validity of this ENV is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the ENV can be converted into an European Standard (EN).

CEN members are required to announce the existence of this ENV in the same way as for an EN and to make the ENV available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the ENV) until the final decision about the possible conversion of the ENV into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

## Foreword

### Objectives of the Eurocodes

- (1) The "Structural Eurocodes" comprise a group of standards for the structural and geotechnical design of buildings and civil engineering works.
- (2) They cover execution and control only to the extent that is necessary to indicate the quality of the construction products, and the standard of the workmanship, needed to comply with the assumptions of the design rules.
- (3) Until the necessary set of harmonised technical specifications for products and for methods of testing their performance are available, some of the Structural Eurocodes cover some of these aspects in informative Annexes.

### Background to the Eurocode Programme

(4) The Commission of the European Communities (CEC) initiated the work of establishing a set of harmonized technical rules for the design of building and civil engineering works which would initially serve as an alternative to the different rules in force in the various Member States and would ultimately replace them. These technical rules became known as the 'Structural Eurocodes'.

(5) In 1990, after consulting their respective Member States, the CEC transferred the work of further development, issue and updating of the Structural Eurocodes to CEN, and the EFTA Secretariat agreed to support the CEN work.

(6) CEN Technical Committee CEN/TC 250 is responsible for all Structural Eurocodes.

### Eurocode Programme

(7) Work is in hand on the following Structural Eurocodes, each generally consisting of a number of parts:

|                    |   |
|--------------------|---|
| EN 1991 Eurocode 1 | Basis of design and actions on structures         |
| EN 1992 Eurocode 2 | Design of concrete structures                     |
| EN 1993 Eurocode 3 | Design of steel structures                        |
| EN 1994 Eurocode 4 | Design of composite steel and concrete structures |
| EN 1995 Eurocode 5 | Design of timber structures                       |

|                    |  |
|--------------------|--|
| EN 1996 Eurocode 6 | Design of masonry structures                   |
| EN 1997 Eurocode 7 | Geotechnical design                            |
| EN 1998 Eurocode 8 | Design of structures for earthquake resistance |
| EN 1999 Eurocode 9 | Design of aluminium alloy structures           |

(8) Separate sub-committees have been formed by CEN/TC250 for the various Eurocodes listed above.

(9) This part of Eurocode 1 is being published as a European Prestandard (ENV) with an initial life of three years.

(10) This Prestandard is intended for experimental application and for the submission of comments

(11) After approximately two years CEN members will be invited to submit formal comments to be taken into account in determining future actions.

(12) Meanwhile feedback and comments on this Prestandard should be sent to the Secretariat of CEN/TC250/SC1 at the following address:

|   |   |
|---|---|
| SNV / SIA (until end May 1995)<br>Selnaustrasse 16<br>CH-8039 ZURICH<br>SWITZERLAND | ENV 1991-2-1:1995<br>Box 5630<br>S-114 86 Stockholm<br>SWEDEN |
|---|---|

or to your national standards organisation.

#### National Application Documents (NAD's)

(13) In view of the responsibilities of authorities in member countries for safety, health and other matters covered by the essential requirements of the Construction Products Directive (CPD), certain safety elements in this ENV have been assigned indicative values which are identified by [ ] ("boxed values"). The authorities in each member country are expected to review the "boxed values" and may substitute definitive values for these safety elements for use in national application.

(14) Some of the supporting European or International standards may not be available by the time this Prestandard is issued. It is therefore anticipated that a National Application Document (NAD) giving any substitute definitive values for safety elements, referencing compatible supporting standards and providing guidance on the national application of this Prestandard, will be issued by each member country or its Standards Organization.

(15) It is intended that this Prestandard is used in conjunction with the NAD valid in

the country where the building or civil engineering works is located.

### **Matters Specific to this Prestandard**

(16) The scope of ENV 1991 is defined in 1.1.1 and the scope of this Part of ENV 1991 is defined in 1.1.2. Additional parts of ENV 1991 which are planned are indicated in 1.2.

## **iTeh STANDARD PREVIEW (standards.iteh.ai)**

SIST ENV 1991-2-1:1998

<https://standards.iteh.ai/catalog/standards/sist/1bbdfb24-89c7-4b07-890a-6f9ba0c2b25f/sist-env-1991-2-1-1998>

## Section 1 General

### 1.1 Scope

#### 1.1.1 Scope of ENV 1991 - Eurocode 1

(1) ENV 1991 provides general principles and actions for the structural design of buildings and civil engineering works including some geotechnical aspects and shall be used in conjunction with ENV 1992-1999.

(2) It may also be used as a basis for the design of structures not covered in ENV 1992-1999 and where other materials or other structural design actions are involved.

(3) ENV 1991 also covers structural design during execution and structural design for temporary structures. It relates to all circumstances in which a structure is required to give adequate performance.

(4) ENV 1991 is not directly intended for the structural appraisal of existing construction, in developing the design of repairs and alterations or, for assessing changes of use.

(5) ENV 1991 does not completely cover special design situations which require unusual reliability considerations such as nuclear structures for which specified design procedures should be used.

#### 1.1.2 Scope of ENV 1991-2-1: Densities, self-weight and imposed loads

(1) Design guidance and actions are provided for the structural design of buildings and civil engineering works including some geotechnical aspects for the following subjects:

- Densities of construction materials and stored materials;
- Self-weight of construction elements;
- Imposed loads.

(2) Section 4 gives characteristic values for densities of specific building materials, additional materials for bridges and stored materials. In addition for specific materials the angle of repose is provided.

(3) Section 5 provides methods for the assessment of the characteristic values of self-weight of construction elements.

(4) Section 6 gives characteristic values of imposed loads on floors and roofs in building structures.

(5) These characteristic values are defined according to category of use as follows:

- areas in dwellings, offices etc;
- garage and vehicle traffic areas;
- areas for storage and industrial activities;
- roofs.

(6)P The loads on traffic areas given in section 6 refers to vehicles up to a gross weight of 160 kN. Traffic areas for heavy vehicles of more than 160 kN total weight shall be designed by applying the road bridge loads according to section 4 of ENV 1991-3.

(7) For barriers or partition walls having the function of barriers, horizontal forces due to persons are given.

Note: Forces due to vehicle impact are specified in ENV 1991-2-7.

(8) Section 6 does not specify fatigue loads and dynamic loads causing vibrations or dynamic effects.

### 1.1.3 Further Parts of ENV 1991

(1) Further Parts of ENV 1991 which, at present, are being prepared or are planned are given in 1.2.

## 1.2 Normative References

This European Prestandard incorporates by dated or undated reference, provisions from other standards. These normative references are cited at the appropriate places in the text and publications listed hereafter.

### 1.3 Distinction between principles and application rules

(1) Depending on the character of the individual clauses, distinction is made in this Part between principles and application rules.

(2) The principles comprise:

- general statements and definitions for which there is no alternative, as well as
- requirements and analytical models for which no alternative is permitted unless
