

**SLOVENSKI STANDARD
DSIST ENV 1993-1-1:1996
01-Uj [i gh1996**

Eurocode 3: Projektiranje jeklenih konstrukcij - Del 1-1: Splošna pravila in pravila za stavbe

Eurocode 3: Design of steel structures - Part 1-1: General rules and rules for buildings

Eurocode 3: Bemessung und Konstruktion von Stahlbauten - Teil 1-1: Allgemeine Bemessungsregeln und Bemessungsregeln für den Hochbau

Eurocode 3: Calcul des structures en acier - Partie 1-1: Regles générales et regles pour les bâtiments

Ta slovenski standard je istoveten z: ENV 1993-1-1:1992/AC:1992

ICS:

91.010.30	Tehnični vidiki	Technical aspects
91.080.10	Kovinske konstrukcije	Metal structures

ENV 1993-1-1:1992

RENORME EUROPEENNE

EUROPAISCHE VORNORM

April 1992

UDC 624.92.014.2:624.07

Descriptors : Buildings, steel structures, computation, building codes, rules of calculation

English version

Eurocode 3: Design of steel structures - Part 1-1: General rules and rules for buildings

Eurocode 3: Calcul des structures en acier - Partie 1-1: Règles générales et règles pour les bâtiments

Eurocode 3: Bemessung und Konstruktion von Stahlbauten - Teil 1-1: Allgemeine Bemessungsregeln, Bemessungsregeln für den Hochbau

This European Prestandard was approved by CEN on 1992-04-24 as a prospective standard for provisional application. The period of validity of this ENV is limited to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the ENV can be converted into a European Standard (EN).

CEN members are required to announce the existence of this ENV in the same way as for an EN and to make the ENV available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the ENV) until the final decision about the possible conversion of the ENV into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword	13
1 Introduction	17
1.1 Scope	17
1.1.1 Scope of Eurocode 3	17
1.1.2 Scope of Part 1.1 of Eurocode 3	17
1.1.3 Further Parts of Eurocode 3	19
1.2 Distinction between principles and application rules	20
1.3 Assumptions	20
1.4 Definitions	21
1.4.1 Terms common to all Structural Eurocodes	21
1.4.2 Special terms used in this Part 1.1 of Eurocode	23
1.5 S.I. units	24
1.6 Symbols used in Part 1.1 of Eurocode 3	24
1.6.1 Latin upper case letters	24
1.6.2 Greek upper case letters	24
1.6.3 Latin lower case letters	25
1.6.4 Greek lower case letters	25
1.6.5 Subscripts	26
1.6.6 Use of subscripts in Part 1.1 of Eurocode 3	28
1.6.7 Conventions for member axes	29
2 Basis of design	31
2.1 Fundamental requirements	31
2.2 Definitions and classifications	31
2.2.1 Limit states and design situations	31
2.2.2 Actions	32
2.2.3 Material properties	35
2.2.4 Geometrical data	35
2.2.5 Load arrangements and load cases	36
2.3 Design requirements	37
2.3.1 General	37
2.3.2 Ultimate limit states	37
2.3.3 Partial safety factors for ultimate limit states	40
2.3.4 Serviceability limit states	41
2.4 Durability	43
2.5 Fire resistance	43
3 Materials	44
3.1 General	44
3.2 Structural steel	44
3.2.1 Scope	44
3.2.2 Material properties for hot rolled steel	44
3.2.3 Material properties for cold formed steel	45
3.2.4 Dimensions, mass and tolerances	45
3.2.5 Design values of material coefficients	47

3.3	Connecting devices	47
3.3.1	General	47
3.3.2	Bolts, nuts and washers	47
3.3.3	Other types of preloaded fasteners	48
3.3.4	Rivets	48
3.3.5	Welding consumables	48
4	Serviceability limit states	49
4.1	Basis	49
4.2	Deflections	49
4.2.1	Requirements	49
4.2.2	Limiting values	50
4.2.3	Ponding	50
4.3	Dynamic effects	52
4.3.1	Requirements	52
4.3.2	Structures open to the public	52
4.3.3	Wind-excited oscillations	52
5	Ultimate limit states	53
5.1	Basis	53
5.1.1	General	53
5.1.2	Frame design	53
5.1.3	Tension members	53
5.1.4	Compression members	53
5.1.5	Beams	54
5.1.6	Members with combined axial force and moment	54
5.1.7	Joints and connections	54
5.1.8	Fatigue	54
5.2	Calculation of internal forces and moments	55
5.2.1	Global analysis	55
5.2.2	Design assumptions	58
5.2.3	Structural systems	60
5.2.4	Allowance for imperfections	61
5.2.5	Sway stability	64
5.2.6	Frame stability	69
5.2.7	Column requirements for plastic analysis	70
5.3	Classification of cross-sections	72
5.3.1	Basis	72
5.3.2	Classification	72
5.3.3	Cross-section requirements for plastic global analysis	73
5.3.4	Cross-section requirements when elastic global analysis is used	73
5.3.5	Effective cross-section properties of Class 4 cross-sections	78
5.3.6	Effects of transverse forces on webs	83
5.4	Resistance of cross-sections	84
5.4.1	General	84
5.4.2	Section properties	84
5.4.3	Tension	86
5.4.4	Compression	87
5.4.5	Bending moment	87
5.4.6	Shear	89

5.4.7	Bending and shear	90
5.4.8	Bending and axial force	91
5.4.9	Bending, shear and axial force	94
5.4.10	Transverse forces on webs	94
5.5	Buckling resistance of members	97
5.5.1	Compression members	97
5.5.2	Lateral-torsional buckling of beams	103
5.5.3	Bending and axial tension	104
5.5.4	Bending and axial compression	104
5.6	Shear buckling resistance	107
5.6.1	Basis	107
5.6.2	Design methods	107
5.6.3	Simple post-critical method	108
5.6.4	Tension field method	109
5.6.5	Intermediate transverse stiffeners	112
5.6.6	Welds	112
5.6.7	Interaction between shear force, bending moment and axial force	114
5.7	Resistance of webs to transverse forces	117
5.7.1	Basis	117
5.7.2	Length of stiff bearing	117
5.7.3	Crushing resistance	120
5.7.4	Crippling resistance	121
5.7.5	Buckling resistance	121
5.7.6	Transverse stiffeners	123
5.7.7	Flange induced buckling	124
5.8	Triangulated structures	125
5.8.1	General	125
5.8.2	Buckling length of members	125
5.8.3	Angles as web members in compression	125
5.9	Built-up compression members	126
5.9.1	Basis	126
5.9.2	Laced compression members	126
5.9.3	Battened compression members	132
5.9.4	Closely spaced built-up members	134
5.9.5	Star-battened angle members	134
6	Connections subject to static loading	137
6.1	Basis	137
6.1.1	Introduction	137
6.1.2	Applied forces and moments	137
6.1.3	Resistance of connections	137
6.1.4	Design assumptions	138
6.1.5	Fabrication and erection	138
6.2	Intersections	139
6.3	Joints loaded in shear subject to vibration and/or load reversal	139
6.4	Classification of connections	139
6.4.1	General	139
6.4.2	Classification by rigidity	139
6.4.3	Classification by strength	140

6.5	Connections made with bolts, rivets or pins	141
6.5.1	Positioning of holes for bolts and rivets	141
6.5.2	Deductions for fastener holes	145
6.5.3	Categories of bolted connections	149
6.5.4	Distribution of forces between fasteners	151
6.5.5	Design resistance of bolts	153
6.5.6	Design resistance of rivets	156
6.5.7	Countersunk bolts and rivets	157
6.5.8	High strength bolts in slip-resistant connections	158
6.5.9	Prying forces	160
6.5.10	Long joints	160
6.5.11	Single lap joints with one bolt	163
6.5.12	Fasteners through packings	163
6.5.13	Pin connections	164
6.6	Welded connections	167
6.6.1	General	167
6.6.2	Geometry and dimensions	167
6.6.3	Lamellar tearing	174
6.6.4	Distribution of forces	175
6.6.5	Design resistance of a fillet weld	175
6.6.6	Design resistance of butt welds	177
6.6.7	Design resistance of plug welds	180
6.6.8	Joints to unstiffened flanges	180
6.6.9	Long joints	181
6.6.10	Angles connected by one leg	181
6.7	Hybrid connections	181
6.8	Splices	183
6.8.1	General	183
6.8.2	Splices in compression members	183
6.8.3	Splices in tension members	183
6.9	Beam-to-column connections	183
6.9.1	Basis	183
6.9.2	Moment-rotation characteristic	183
6.9.3	Moment resistance	185
6.9.4	Rotational stiffness	185
6.9.5	Rotation capacity	185
6.9.6	Classification of beam-to-column connections	192
6.9.7	Calculated properties	196
6.9.8	Application rules	198
6.10	Hollow section lattice girder joints	198
6.10.1	Design resistance	198
6.10.2	Application rules	198
6.11	Column bases	199
6.11.1	Base plates	199
6.11.2	Holding down bolts	199
6.11.3	Application rules	199
7	Fabrication and erection	200
7.1	General	200
7.1.1	Scope	200
7.1.2	Requirements	200

7.2	Project specification	200
7.3	Fabrication restrictions	201
7.4	Preparation of material	201
7.5	Bolted connections	202
7.5.1	Holes	202
7.5.2	Clearance in holes for fasteners	202
7.5.3	Bolts	203
7.5.4	Nuts	203
7.5.5	Washers	204
7.5.6	Tightening of bolts	204
7.5.7	Slip resistant contact surfaces	204
7.5.8	Fit of contact surfaces	204
7.6	Welded connections	206
7.7	Tolerances	206
7.7.1	Types of tolerances	206
7.7.2	Application of tolerances	207
7.7.3	Normal erection tolerances	207
7.7.4	Fabrication tolerances	210
7.7.5	Position of holding down bolts	210
7.8	Inspection and Testing	210
8	Design assisted by testing	211
8.1	Basis	211
8.2	Planning of tests	211
8.3	Execution of tests	212
8.4	Test evaluation	213
8.5	Documentation	213
9	Fatigue	214
9.1	General	214
9.1.1	Basis	214
9.1.2	Scope	214
9.1.3	Limitations	214
9.1.4	Necessity for fatigue assessment	214
9.1.5	Definitions	215
9.1.6	Symbols	218
9.2	Fatigue loading	219
9.3	Partial safety factors	220
9.3.1	General	220
9.3.2	Partial safety factors for fatigue loading	220
9.3.3	Partial safety factors for fatigue strength	221
9.3.4	Recommended values for γ_{Mf}	221
9.4	Fatigue stress spectra	222
9.4.1	Calculation of stresses	222
9.4.2	Stress range in parent material	222
9.4.3	Stress range for welds	222
9.4.4	Design stress range spectrum	222
