ISO 6361-2 : 1990 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 6361-2 was prepared by Technical Committee ISO/TC 79, *Light metals and their alloys*.

This second edition cancels and replaces the first edition (ISO 6361-2 : 1987), of which it constitutes a technical revision.

ISO 6361 consists of the following parts, under the general title *Wrought aluminium and aluminium alloy sheets, strips and plates*:

- *Part 1: Technical conditions for inspection and delivery*
- *Part 2: Mechanical properties*
- *Part 3: Strips — Tolerances on shape and dimensions*
- *Part 4: Sheets and plates — Tolerances on shape and dimensions*

Annexes A and B form an integral part of this part of ISO 6361.

Wrought aluminium and aluminium alloy sheets, strips and plates —

Part 2: Mechanical properties

1 Scope

In conjunction with ISO 6361-1, this part of ISO 6361 specifies the mechanical properties of wrought aluminium and aluminium alloy sheets, strips and plates for general engineering applications.

It applies to flat rolled products.

The chemical composition of these materials is given in ISO 201-1.

The designations of aluminium and aluminium alloys and the temper designations used in this part of ISO 6361 are in accordance with ISO 2092, ISO 2107 and annex B respectively.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 6361. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this part of ISO 6361 are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 209-1 : 1989, *Wrought aluminium and aluminium alloys — Chemical composition and forms of products — Part 1: Chemical composition.*

ISO 2092 : 1981, *Light metals and their alloys — Code of designation based on chemical symbols.*

ISO 2107 : 1983, *Aluminium, magnesium and their alloys — Temper designations.*

ISO 3134-3 : 1985, *Light metals and their alloys — Terms and definitions — Part 3: Wrought products.*

ISO 6361-1 : 1986, *Wrought aluminium and aluminium alloy sheets, strips and plates — Part 1: Technical conditions for inspection and delivery.*

3 Definitions

For definitions of the terms *sheet*, *strip* and *plate*, see ISO 3134-3.

NOTE — In certain countries, for purposes of mechanical properties, the thickness limit may be lowered to 0,15 mm by agreement between the purchaser and the supplier, in the case of sheets and strips.

4 Tensile testing

For the selection of the specimens and tensile testing, see ISO 6361-1.

5 Mechanical properties

Values for mechanical properties of aluminium and aluminium alloys are given in tables 1 to 20. For elongation two different gauge lengths are used. The choice of the gauge length for elongation measurements (A or $A_{50 \text{ mm}}$) is at the discretion of the producer, unless otherwise agreed¹⁾.

Test results shall be rounded in accordance with the rules given in annex A.

1) A : percentage elongation on a gauge length of $5,65 \sqrt{S_0}$

$A_{50 \text{ mm}}$: percentage elongation on a gauge length of 50 mm

	H2D	0,35 < <i>a</i> < 5,0 ¹⁾	240 to 280	160	10	—
	H3H	0,35 < <i>a</i> < 3,0	290 min.	250	3	—

5.13 Table 13 – Alloy Al Mg3Mn (5454)

Product	Temper	Thickness <i>a</i> mm	Tensile strength <i>R_m</i> MPa	0,2 % proof stress <i>R_{p0,2}</i> min. MPa	Elongation min.	
					<i>A</i> %	<i>A</i> _{50 mm} %
Sheet, strip	O	1,6 < <i>a</i> < 6,0 ¹⁾	215 to 285	85	16	16
	M	3,0 < <i>a</i> < 6,0 ¹⁾	215 min.	100	16	—
Plate	O	6,0 < <i>a</i> < 25	215 to 285	85	16	18
	M	6,0 < <i>a</i> < 25	215 min.	100	16	14

1) Maximum thickness of strips: 3 mm.

5.14 Table 14 — Alloy Al Mg4,5Mn0,7 (5083)

Product	Temper	Thickness <i>a</i> mm	Tensile strength <i>R_m</i> MPa	0,2 % proof stress <i>R_{p0,2}</i> min. MPa	Elongation min.	
					<i>A</i> %	<i>A</i> _{50 mm} %
Sheet, strip	O	1,20 < <i>a</i> < 6,0 ¹⁾	275 to 350	125 to 200 ²⁾	17	See table 14a)
	H3B	1,20 < <i>a</i> < 6,0 ¹⁾	310 to 380	235 to 305 ²⁾	10	
	H3D	1,20 < <i>a</i> < 6,0 ¹⁾	345 to 405	270 to 340 ²⁾	6	
Plate	O	6,0 < <i>a</i> < 50	270 to 345	115 to 200 ²⁾	14	
	M	6,0 < <i>a</i> < 12,5	275 min.	125 min.	12	
	M	12,5 < <i>a</i> < 25	275 min.	125 min.	10	

Table 14a) — Minimum elongation *A*_{50 mm} in per cent

Thickness <i>a</i> mm	<i>A</i> _{50 mm} min.			
	Temper			
	M	O	H3B	H3D
1,2 < <i>a</i> < 3,0	—	16	8	6
3,0 < <i>a</i> < 6,0	—	16	10	8
6,0 < <i>a</i> < 12,5	12	16	—	—

iTeh STANDARD PREVIEW

5.15 Table 15 — Alloy Al SiMgMn (6082)

Product	Temper	Thickness <i>a</i> mm	Tensile strength <i>R_m</i> min. MPa	0,2 % proof stress <i>R_{p0,2}</i> min. MPa	Elongation min.	
					<i>A</i> %	<i>A</i> _{50 mm} %
Sheet, strip	TF	0,35 < <i>a</i> < 10	310	260	10	8

1) Maximum thickness of strips: 3 mm.

2) Minimum values guaranteed only on special agreement between the supplier and the purchaser.
