About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

Useful links:

IEC publications search - www.iec.ch/searchpub

The advanced search enables you to find IEC publications by a variety of criteria (reference number, text, technical committee,…).
It also gives information on projects, replaced and withdrawn publications.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary (IEV) on-line.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available on-line and also once a month by email.

Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de la CEI

La Commission Electrotechnique Internationale (CEI) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications CEI

Le contenu technique des publications de la CEI est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Liens utiles:

Recherche de publications CEI - www.iec.ch/searchpub

La recherche avancée vous permet de trouver des publications CEI en utilisant différents critères (numéro de référence, texte, comité d'études,…).
Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne au monde de termes électroniques et électriques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans les langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (VEI) en ligne.

Just Published CEI - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications de la CEI. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: csc@iec.ch.

CONSUMER AUDIO/VIDEO EQUIPMENT – DIGITAL INTERFACE –

Part 6: Audio and music data transmission protocol

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61883-6 has been prepared by Technical Area 4: Digital system interfaces, of IEC technical committee 100: Audio, video and multimedia systems and equipment.

This second edition of IEC 61883-6 cancels and replaces the first edition published in 2002. This edition contains the following significant technical changes with respect to the previous edition.

a) It extends the AM824 data format transmission and specifies more details in order to reduce the ambiguities of the first edition.
b) It introduces new Clauses 4, 10, 11 and 12 as well as Annex D and, in 8.2, specifies new data types for SMPTE time code, sample count, high-precision multi-bit linear audio and ancillary data.
c) It changes the terminology "raw audio data" to "multi-bit linear audio (MBLA)".
d) It defines, in Clause 11, sequence multiplexing and MIDI data required to the AM824 adaptation process.

e) It describes, in Clause 12, application-specific data transmission such as DVD-audio and SACD.

f) It specifies, in Clause 20, the N-flag that indicates command-based rate control and defines new sampling frequency code (SFC) definition and interpretation.

This bilingual version (2012-08) corresponds to the monolingual English version, published in 2005-10.

The text of this standard is based on the following documents:

FDIS	Report on voting
100/1001/FDIS	100/1024/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

The French version of this standard has not been voted upon.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

IEC 61883 consists of the following parts under the general title *Consumer audio/video equipment – Digital interface*:

Part 1: General
Part 2: SD-DVCR data transmission
Part 3: HD-DVCR data transmission
Part 4: MPEG2-TS data transmission
Part 5: SDL-DVCR data transmission
Part 6: Audio and music data transmission protocol
Part 7: Transmission of ITU-R BO.1294 System B

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

CONSUMER AUDIO/VIDEO EQUIPMENT – DIGITAL INTERFACE –

Part 6: Audio and music data transmission protocol

1 Scope

This part of IEC 61883 describes a protocol for the transmission of audio and music data employing IEEE 1394 and specifies essential requirements for the application of the protocol.

This protocol can be applied to all modules or devices that have any kind of audio and/or music data processing, generation and conversion function blocks. This document deals only with the transmission of audio and music data; the control, status and machine-readable description of these modules or devices should be defined outside of this document according to each application area.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60958 (all parts), *Digital audio interface*

IEC 61883-1:2003, *Consumer audio/video equipment – Digital interface – Part 1: General*

IEC 61883-6:2002, *Consumer audio/video equipment – Digital interface – Part 6: Audio and music data transmission protocol*

IEEE 754:1985, *Standard for Binary Floating-Point Arithmetic*

IEEE 1394: *Standard for a High Performance Serial Bus*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 61883-1, as well as the following, apply.

3.1
32-bit floating-point data
data type which is defined in IEEE 754:985

3.2
AM824 Data
32-bit data consisting of an 8-bit label and 24-bit data

3.3
A/M protocol
protocol for the transmission of audio and music data over IEEE 1394

3.4
ASID
Audio Software Information Delivery (see http://riaj.japan-music.or.jp/tech/asid/e.html)

3.5
AV/C
Audio Video Control

3.6
DVD

3.7 Digital Versatile Discs (see http://www.dvdforum.org/index.htm)
MIDI
Musical Instrument Digital Interface

NOTE The complete MIDI 1.0 detailed specification, Version 96.1, March 1996, is a specification for the interconnection of digital music processing devices (for example, keyboards and signal processors) and computers.

3.8
music data
data generally used for controlling a tone generator.

NOTE The data defined in the MIDI specification, which may be called MIDI data, are an example of music data.

3.9
reserved
keyword used to describe objects – bit, byte, quadlet, octet, and field – or the code values assigned to these objects, the object or the code value being set aside for future standardization by the IEC

3.10 SACD
SACD Super Audio CD (see http://www.licensing.philips.com/).

3.11
stream
uni-directional data transmission

3.12
time stamp
quantized timing in which an event occurs based on a reference clock

NOTE The reference clock is CYCLE_TIME unless otherwise specified in this standard.

4 Reference model for data transmission

This clause describes a reference model for data transmission.

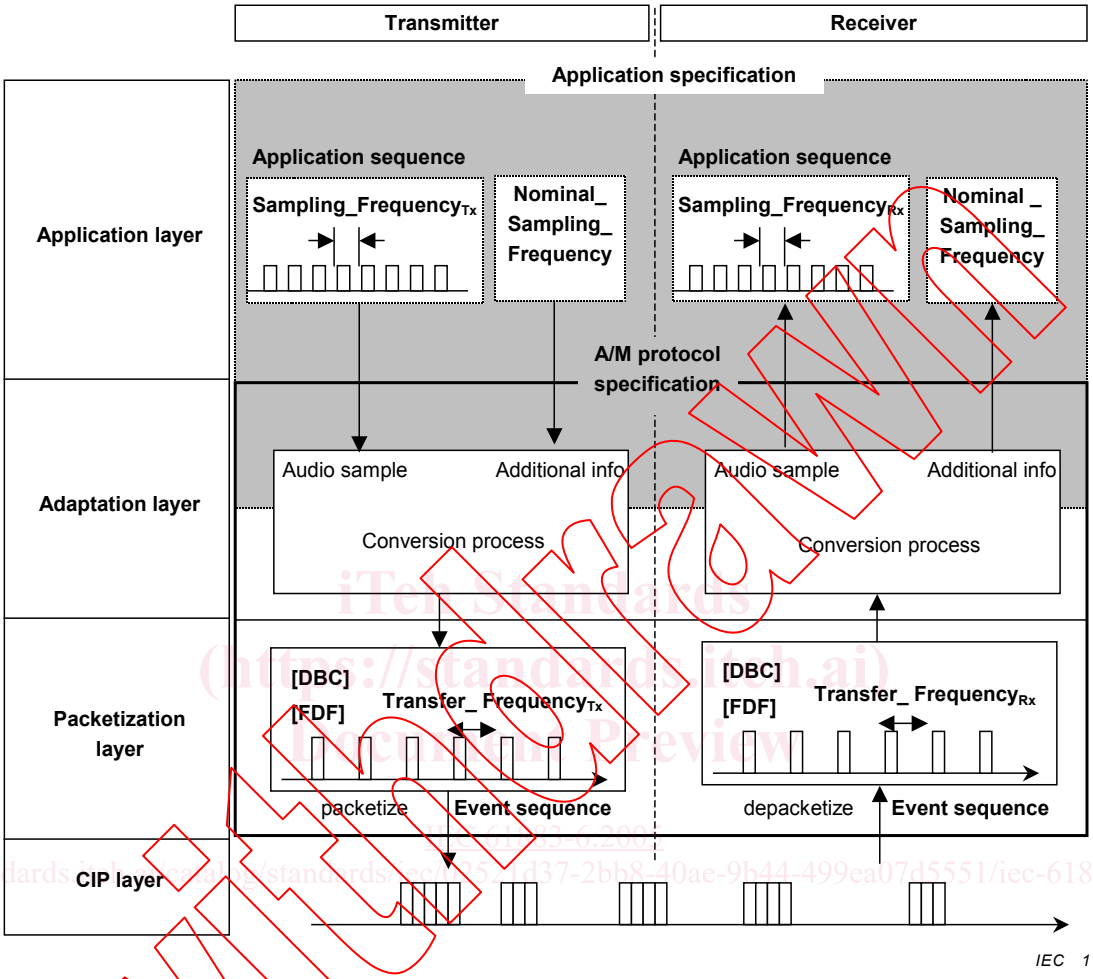

Figure 1 – Reference model for audio and music data transmission

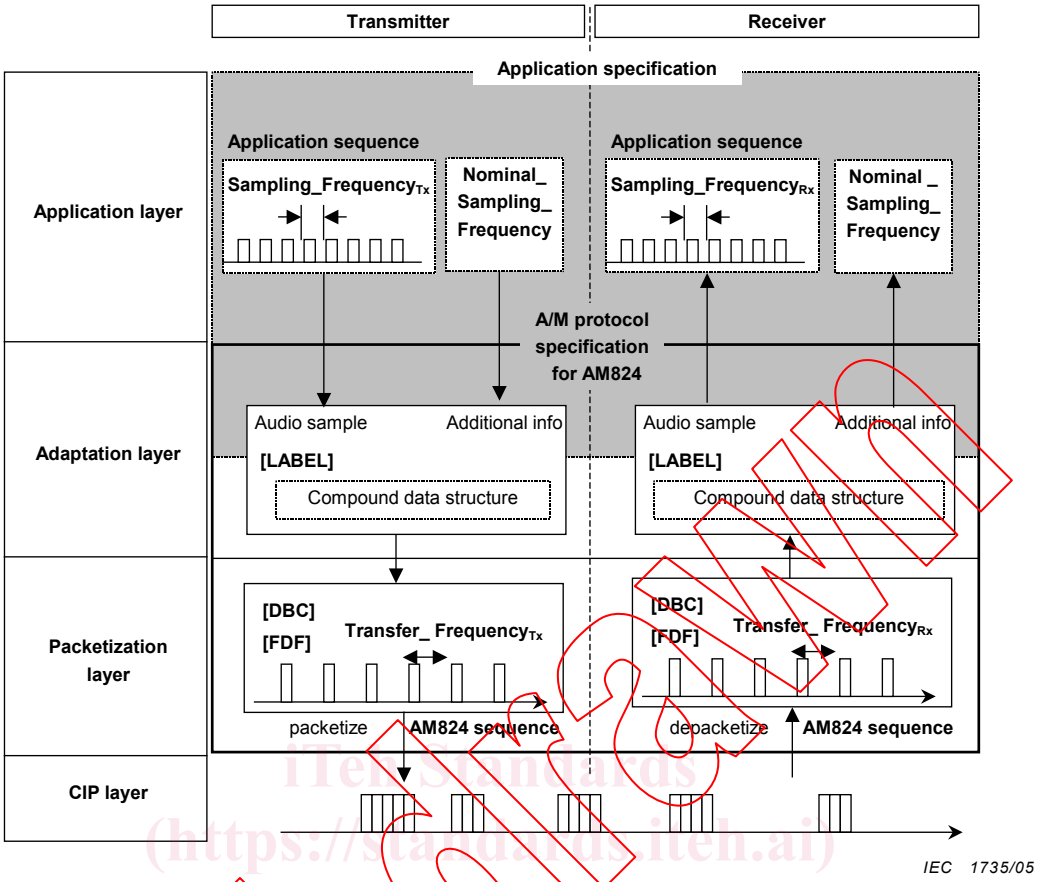

Figure 2 – Reference model for AM824 data transmission

Figure 1 gives an outline for audio data transmission from a transmitter to a receiver. It has four major layers denoted as CIP (common isochronous packet) layer, packetization layer, adaptation layer and application layer.

4.1 Application layer

Each application defines its own application sequence and the interface to the adaptation layer. The application sequence in Figure 1 is data in a format such as an audio signal format. The Nominal_Sampling_Frequency is the ideal sampling frequency for the application sequence. The range of *Sampling_Frequency* should be defined by the application. The audio signal at Nominal_Sampling_Frequency can be reproduced at the actual rate of Sampling_ Frequency in operation. This means that the value of Sampling_Frequency may have some deviation and/or may vary in time in contrast with Nominal_Sampling_Frequency.

Additional information in Figure 1 is any information other than events of a sequence (audio samples) being transmitted at a given rate.

4.2 Adaptation layer

The adaptation layer defines a process to convert an application sequence to an event sequence and vice versa. The conversion process may not be required if an application sequence and an event sequence have the same structure. If an event sequence consists of events of 24-bit payload, such as AM824 data defined in 8.2, and if the bit length of an audio sample of the application sequence is not 24-bit, some conversion between Sampling_Frequency and Transfer_Frequency may be required (see Figure 2 and Clause 11). The Transfer_Frequency represents the frequency of occurrence of a data block, which is equivalent to a cluster event. The Transfer_Frequency is used for describing a conceptual transmission model.

The transfer rate of an event sequence is 24 * Transfer_ Frequency [bit/sec] in the case of AM824.

Generally, the adaptation layer is designed in such a way that both the application sequence at Sampling_Frequency and its Nominal_Sampling_Frequency are carried. In this specification, Nominal_Sampling_Frequency, which would usually be one of the ancillary data items, is carried by the SFC (sampling frequency code) which is defined in Clause 10. The information in Nominal_Sampling_Frequency is necessary for using command-based rate control or making a copy. On the other hand, Sampling_Frequency is necessary for clock-based rate control. Although Sampling_Frequency is not explicitly transmitted, it can be estimated from SYT_INTERVAL and time stamps by the algorithm specified for the AM824 data type.

An application specification defines the process (shown in the grey shaded area of Figure 1) to convert the signal of the application (application sequence) to an event sequence. This standard assumes that the application specification is an external document using the definition of an event sequence for the adaptation process. For several generic data types, this standard also defines the adaptation layer.

The adaptation to an event sequence is the point at which the packetization process interfaces to the application. The packetization process can be described as IEEE 1394 adaptation from the point of view that the data stream utilizes IEEE 1394 as its transport.

More details of this layer are described in Clause 12.

4.3 Packetization layer

The AM824 sequence is directly packetized to CIP or depacketized from CIP in the packetization layer.

The Transfer_Frequency can be implicitly expressed by the output of a locked PLL circuit, as shown in Figure 3, instead of being explicitly denoted in the packetization layer.

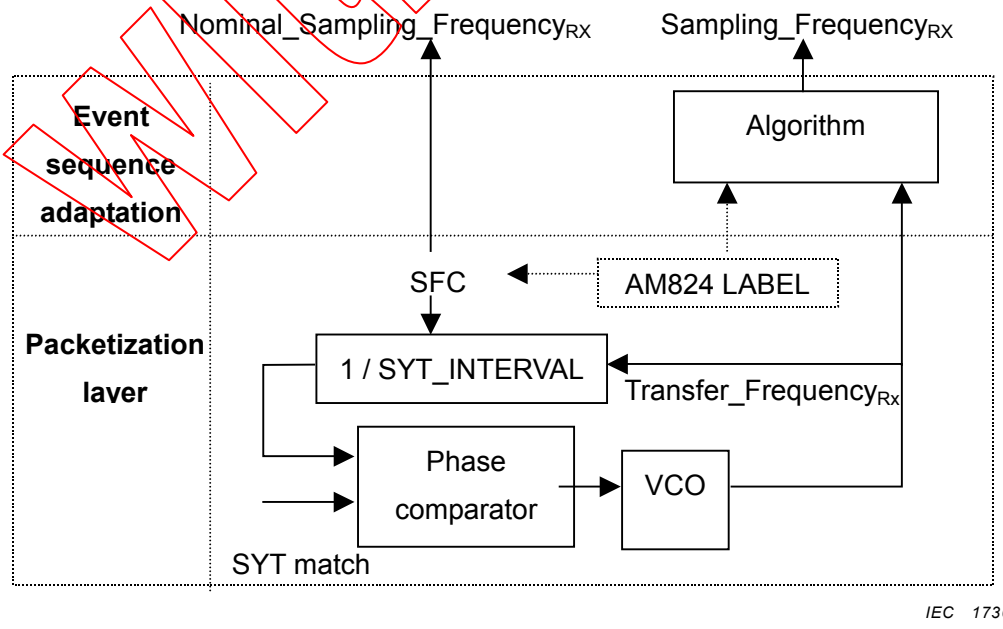

Figure 3 – Implementation example of receiver
