This amendment A1 modifies the European Standard EN 60335-2-3:1995; it was approved by CENELEC on 1999-08-01. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this amendment the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This amendment exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

The text of document 61/1563/FDIS, future amendment to IEC 60335-2-3:1993 prepared by the IEC Technical Committee 61, was submitted to the IEC-CENELEC parallel vote and was approved by CENELEC as amendment A1 to EN 60335-2-3 on 1999-08-01.

The following dates are applicable:

- latest date by which the amendment has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2000-05-01
- date on which national standards conflicting with the amendment have to be withdrawn (dow) 2002-08-01

This amendment supplements or modifies the corresponding clauses of EN 60335-2-3:1995.

There are no special national conditions causing a deviation from this amendment.

There are no national deviations from this amendment.

Introduction

An investigation by CENELEC TC 61 has shown that all risks from products within the scope of this standard are fully covered by the Low Voltage Directive, 73/23/EEC. If the product has mechanical moving parts; a risk assessment in accordance with the Machinery Directive, 89/392/EEC, has shown that the risks are mainly of electrical origin and consequently this directive is not applicable. However, the relevant essential safety requirements of the Machinery Directive are covered by this standard together with the principal objectives of the Low Voltage Directive.

FOREWORD

This amendment has been prepared by IEC technical committee 61: Safety of household and similar electrical appliances.

This bilingual version (1999-11) replaces the English version.

The text of this amendment is based on the following documents:

FDIS	Report on voting
61/1563/FDIS	61/1606/RVD

Full information on the voting for the approval of this amendment can be found in the report on voting indicated in the above table.

4 General conditions for the tests

Add:

iTeh STANDARD PREVIEW
(standards.iteh.ai)

4.2 Addition:

NOTE – The additional test of 25.14 is carried out on a separate appliance.

[SIST EN 60335-2-3:1997/A1:2000](https://standards.iteh.ai/catalog/standards/sist/a8640bcf-b2a1-4c4a-834b-021c597bc41b/sist-en-60335-2-3-1997-a1-2000)

<https://standards.iteh.ai/catalog/standards/sist/a8640bcf-b2a1-4c4a-834b-021c597bc41b/sist-en-60335-2-3-1997-a1-2000>

24 Components

24.4 Add the following note:

NOTE – This requirement is not applicable to the connection between the iron and the **stand of cordless irons**.

24.5 Add the following note:

NOTE – This requirement is not applicable to the connection between the iron and the **stand of cordless irons**.

25 Supply connection and external flexible cords

25.14 Add to the addition:

Appliances are also subjected to the following test while mounted on an apparatus similar to that of figure 11.

*Initially the **supply cord** hangs vertically and is loaded so that a force of 10 N is applied. The oscillating member is moved through an angle of 180° and back to the initial position. The number of flexings is 2 000, the rate of flexing being six per minute.*

NOTE 2 – The appliance is mounted so that the direction of flexing corresponds to that most likely to occur when the **supply cord** is wound around it for storage.

NOTE 3 – The test is not carried out if it is unlikely that the cord will be wrapped around the appliance, for example **cordless irons** and irons with a separate water reservoir.
