Descriptors: technical drawings, graphic methods, form tolerances, symbols, dimensions.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

iTeh STA

International Standard ISO 7083 was developed by Technical Committee ISO/TC 10, Technical drawings, and was circulated to the member bodies in September 1981

It has been approved by the member bodies of the following countries:

Technical drawings — Symbols for geometrical tolerancing — Proportions and dimensions

Introduction

The purpose of this International Standard is to give instruc tions for the correct execution of the symbols for geometrical tolerancing on technical drawings (see SISO 1101 2and S.13 @General conditions ISO 5459), and to harmonize the dimensioning of these sym-

bols with the lettering used for dimensioning and other indica 183:1983.1 tions on the drawing.

The lettering used with the symbols shall be in accordhttps://standards.iteh.ai/catalog/standards/siance_with/the_specifications-of ISO 3098/1.

Scope and field of application

This International Standard specifies the recommended proportions and lays down the dimensions for the symbols used to indicate geometrical tolerancing on technical drawings.

The symbols and their lettering may be hand-written (using a rule for drawing the frames) or executed by means of other appropriate methods (for example, stencils, transfers, mechanical drawing, etc.).

The dimensions of the symbols are based on the standard heights of lettering given in ISO 3098/1.

3.2 It is recommended that on any one drawing the height, thickness of lines and type of lettering with the symbols be equal to those applied for the dimensioning and other indications on that drawing.

4 Proportions

Examples for the proportions of the symbols and frames for use with lettering type B, vertical or inclined, are shown in figures 1

The configurations are depicted on a grid with a spacing equal to the thickness of line. The design of the inscribed characters is mostly not shown, but shall be the same as in ISO 3098/1 for lettering type B, vertical or inclined.

For the alternative lettering type A, vertical or inclined, appropriate grids should be used, but it is understood that

- frames are always drawn as squares or rectangles;
- symbols for toleranced characteristics and additional symbols (see ISO 1101) are always to be depicted as shown in figures 1 to 21.

5 Dimensions

5.1 Recommended dimensions of the symbols with lettering type A are specified in table 1, those for use with lettering type B in table 2.

Table 1 — Lettering type A

Dimensions in millimetres

Characteristic	Recommended dimensions								
Height of frame (H) *	7	10	14	20	28	40			
Height of characters (h)	3,5	5	7	10	14	20			
Diameter (D) **	14	20	28	40	56	80			
Thickness of line (d)	0,25	0,35	0,5	0,7	1	1,4			

Table 2 - Lettering type B

Dimensions in millimetres

Characteristic	Recommended dimensions								
Height of frame (H) *	5	7	10	14	20	28	40		
Height of characters (h)	2,5	3,5	5	7	10	14	20		
Diameter (D) **	10	14	20	28	40	56	80		
Thickness of line (d)	0,25	0,35	0,5	0,7	1	1,4	2		

^{*} Where an additional tolerance value is to be inscribed in a lower compartment (see ISO 1101), this height should be increased, dependent on the heights of the inscriptions. Teh STANDARD PREVIEW

** See figure 18.

5.2 The recommended widths of the frame should be:

- first compartment, equal to height of frame (H);
- second compartment, to suit the length of the inscription;
- third and subsequent compartments, if required, to suit the width of the reference letter (or letters).

The distances between the vertical strokes of the compartments and the inscriptions shall be at least twice the thickness of lines, with a minimum of 0,7 mm.
