# Machinery for the supply and circulation of coating materials under pressure - Safety requirements

Installations d'alimentation et de circulation de produits de revêtement sous pression - Prescriptions de sécurité

Förder- und Umlaufanlagen für Beschichtungsstoffe unter Druck - Sicherheitsanforderungen

This European Standard was approved by CEN on 9 December 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

# iTeh STANDARD PREVIEW (standards.iteh.ai)

#### **Foreword**

This European Standard (EN 12621:2006) has been prepared by Technical Committee CEN/TC 271 "Surface treatment equipment — Safety", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2006, and conflicting national standards shall be withdrawn at the latest by July 2006.

This European Standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, and ZB, which are an integral part of this European Standard.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

iTeh STANDARD PREVIEW (standards.iteh.ai)

#### Introduction

This European Standard is a type C standard as stated in EN ISO 12100.

This European Standard is part of a series of documents prepared by CEN/TC 271/WG2 specifying the health, safety and environmental protection requirements for devices, units and equipment for surface coating:

- EN 1953 "Atomising and spraying equipment for coating materials";
- prEN 12621 "Machinery for the supply and circulation of coating materials under pressure";
- prEN 12757-1 "Mixing machinery for coating materials".

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this European Standard.

When provisions of this type C standard are different from those stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards, for machines that have been designed and built according to the provisions of this type C standard.

# iTeh STANDARD PREVIEW (standards.iteh.ai)

#### 1 Scope

**1.1** This European Standard applies to the design and construction of machinery for the supply and circulation of coating and/or auxiliary materials under pressure – in the following called "machine" (see 3.1).

The coating material is supplied by air pressure or airless.

NOTE Machines covered by this European Standard may be linked with e.g. colour mixing machinery, atomising and spraying equipment, spray booths and stands and/or automated coating machinery.

The pressure related parts of the machines covered are classified as no higher than category I under article 9 of the Pressure Equipment Directive 97/23/EC.

This European Standard deals with the significant hazards, hazardous situations and events relevant to the machinery for the supply and circulation of coating and/or auxiliary materials under pressure, when they are used as intended and under the conditions foreseen by the manufacturer (see Clause 4).

Machinery for the supply and circulation of coating and/or auxiliary materials under pressure consists of the following equipment:

	pump	units;
--	------	--------

pressure vessels:

# iTeh STANDARD PREVIEW

non-pressurised containers;

SIST EN 12621:2006

(standards.iteh.ai)

interconnecting pipes and hoses

https://standards.iteh.ai/catalog/standards/sist/4a757b20-b0c7-4af3-afc0-

- flanges, nozzles, couplings, supports, lifting equipment etc.; 2621-2006
- agitators;
- filters;
- pulsation damping devices;
- all safety devices (e.g. level monitoring equipment);
- equipment for heating and/or cooling of the coating materials.

The machine may be fixed or mobile.

- **1.2** This European Standard excludes:
- pressure related hazards of equipment classified as higher than category 1 under article 9 of the Pressure Equipment Directive 97/23/EC;
- atomising and spraying equipment as dealt with in EN 1953:1998 and the supply hoses for this equipment;
- atomising and spraying equipment as dealt with in EN 50144-2-7:2001, EN 50260-2-7:2002 and the supply hoses for this equipment.
- **1.3** This European Standard does not apply to:
- processing of foodstuffs and pharmaceuticals;

- design and construction of pipes and hoses;
- design and construction of coating presses (see 3.23);
- machinery for the supply of powder coating material.
- **1.4** This European Standard is not applicable to machinery for the supply and circulation of coating materials under pressure which are manufactured before the date of publication of this document by CEN.

#### 3 Terms and definitions

For the purposes of this European Standard, the terms and definitions given in EN 971-1:1996 and EN ISO 12100-1:2003 and the following apply.

### iTeh STANDARD PREVIEW

#### machine

machinery for the supply and circulation of coating materials under pressure

#### 3.2

#### coating equipment

SIST EN 12621:2006

equipment used for the application of coating materials dards/sist/4a757b20-b0c7-4af3-afc0-

e2ea24cb0416/sist-en-12621-2006

NOTE Application by means such as, but not limited to:

- atomising and spraying;
- extrusion;
- flow coating.

#### 3.3

#### pump unit

equipment comprising the pump, the power supply including the transmission elements (e.g. couplings, gears), base plates

#### 3.4

#### pressure vessel

housing designed and built to contain coating and/or auxiliary materials under pressure including its direct attachments up to the coupling point connecting it to other equipment. A vessel may be composed of more than one chamber

#### 3.5

#### container

vessel without pressure used for the storage and/or mixing of coating and/or auxiliary materials

#### 3.6

#### safety device

device to fulfil a safety function when in use and the failure or malfunctioning of which endangers the safety or health of persons

#### 3.7

#### agitator

device which is used to stir or otherwise move the coating material

#### EN 12621:2006 (E)

NOTE Such device is generally used in conjunction with pressure vessels or coating material containers. Such devices may be driven by a power supply.

#### 3.8

#### pulsation damping device

device used to reduce pulsations which have been transmitted to the coating and/or auxiliary material by the operating cycles of the pump unit used in the machine

#### 3.9

#### equipment for heating and/or cooling the coating and/or auxiliary materials

equipment, which may use electrical energy or some other source of energy, such as water or gas, to create a temperature change in the coating and/or auxiliary material

#### 3.10

#### coating material

organic product in liquid or in paste form (see 1.9 of EN 971-1:1996)

NOTE 1 Such coating materials may consist of binders, pigments, fillers, solvents, thinner and other additives.

NOTE 2 Such coating materials can be:

- varnishes (see 1.7 of EN 971-1:1996);
- paints (see 1.36 of EN 971-1:1996);
- patching compounds;
- fillers (see 1.21 of EN 971-1:1996);
- sealers and adhesives. iTeh STANDARD PREVIEW

#### 3.11

#### auxiliary material

material used for functions e.g.:

#### SIST EN 12621:2006

(standards.iteh.ai)

- solvents, compressed aip(fortcleaning))h.ai/catalog/standards/sist/4a757b20-b0c7-4af3-afc0-e2ea24cb0416/sist-en-12621-2006
- water, compressed air (for maintenance)

#### 3.12

#### flammable substance

substance in form of gas, vapour, liquid, solid, or mixtures of these, able to undergo an exothermic reaction with air when ignited (see 3.1 of EN 1127-1:1997)

NOTE "Flammable substances" and "combustible material" are equivalently used terms in this European Standard.

#### 3.13

#### explosion range

range of concentration of a flammable substance with air, within which an explosion can occur (see 3.13 of EN 1127-1:1997)

#### 3.14

#### hazardous areas

areas where hazards due to explosive atmosphere may exist. The probability of occurrence of explosive atmospheres is classified in zones.

NOTE Limits of hazardous zones are given in Annex B

#### 3.14.1

#### zone 0

place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is present continuously or for long periods or frequently (see 6.3.2 of EN 1127-1:1997)
