## About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

## About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

- Catalogue of IEC publications: [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The IEC on-line Catalogue enables you to search by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, withdrawn and replaced publications.

- IEC Just Published: [www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)

Stay up to date on all new IEC publications. Just Published details twice a month all new publications released. Available on-line and also by email.

- Electropedia: [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing more than 20 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary online.

## A propos de la CEI

La Commission Electrotechnique Internationale (CEI) est la première organisation mondiale qui élabore et publie des normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

## A propos des publications CEI

Le contenu technique des publications de la CEI est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

- Catalogue des publications de la CEI: [www.iec.ch/searchpub/cur\\_fut-f.htm](http://www.iec.ch/searchpub/cur_fut-f.htm)

Le Catalogue en-ligne de la CEI vous permet d'effectuer des recherches en utilisant différents critères (numéro de référence, texte, comité d'études,...). Il donne aussi des informations sur les projets et les publications retirées ou remplacées.

- Just Published CEI: [www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)

Restez informé sur les nouvelles publications de la CEI. Just Published détaille deux fois par mois les nouvelles publications parues. Disponible en-ligne et aussi par email.

- Electropedia: [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne au monde de termes électroniques et électriques. Il contient plus de 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans les langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International en ligne.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

## LOW-VOLTAGE SURGE PROTECTIVE DEVICES –

**Part 11: Surge protective devices connected  
to low-voltage power systems –  
Requirements and test methods**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61643-11 has been prepared by subcommittee 37A: Low-voltage surge protective devices, of IEC technical committee 37: Surge arresters.

This first edition of IEC 61643-11 cancels and replaces the second edition of IEC 61643-1 published in 2005. This edition constitutes a technical revision.

The main changes with respect of the second edition of IEC 61643-1 are the complete restructuring and improvement of the test procedures and test sequences.

The text of this standard is based on the following documents:

FDIS	Report on voting
37A/229/FDIS	37A/232/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61643 series can be found, under the general title *Low-voltage surge protective devices*, on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

NOTE The attention of National Committees is drawn to the fact that equipment manufacturers and testing organizations may need a transitional period following publication of a new, amended or revised IEC publication in which to make products in accordance with the new requirements and to equip themselves for conducting new or revised tests.

It is the recommendation of the committee that the content of this publication be adopted for national implementation not earlier than 12 months from the date of publication.

## INTRODUCTION

This part of IEC 61643 addresses safety and performance tests for surge protective devices (SPDs).

There are three classes of tests:

The Class I test is intended to simulate partial conducted lightning current impulses. SPDs subjected to Class I test methods are generally recommended for locations at points of high exposure, e.g., line entrances to buildings protected by lightning protection systems.

SPDs tested to Class II or III test methods are subjected to impulses of shorter duration.

SPDs are tested on a “black box” basis as far as possible.

IEC 61643-12 addresses the selection and application principles of SPDs in practical situations.

## LOW-VOLTAGE SURGE PROTECTIVE DEVICES –

### Part 11: Surge protective devices connected to low-voltage power systems – Requirements and test methods

#### 1 Scope

This part of IEC 61643 is applicable to devices for surge protection against indirect and direct effects of lightning or other transient overvoltages. These devices are packaged to be connected to 50/60 Hz a.c. power circuits, and equipment rated up to 1 000 V r.m.s. Performance characteristics, standard methods for testing and ratings are established. These devices contain at least one nonlinear component and are intended to limit surge voltages and divert surge currents.

#### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

#### 3 Terms, definitions and abbreviations

For the purposes of this document, the following terms, definitions and abbreviations apply.

### 3.1 Terms and definitions

#### 3.1.1

##### **surge protective device**

##### **SPD**

device that contains at least one nonlinear component that is intended to limit surge voltages and divert surge currents

NOTE An SPD is a complete assembly, having appropriate connecting means.

#### 3.1.2

##### **one-port SPD**

SPD having no intended series impedance

NOTE A one port SPD may have separate input and output connections.

#### 3.1.3

##### **two-port SPD**

SPD having a specific series impedance connected between separate input and output connections

#### 3.1.4

##### **voltage switching type SPD**

SPD that has a high impedance when no surge is present, but can have a sudden change in impedance to a low value in response to a voltage surge

NOTE Common examples of components used in voltage switching type SPDs are spark gaps, gas tubes and thyristors. These are sometimes called "crowbar type" components.

#### 3.1.5

##### **voltage limiting type SPD**

SPD that has a high impedance when no surge is present, but will reduce it continuously with increased surge current and voltage

NOTE Common examples of components used in voltage limiting type SPDs are varistors and avalanche breakdown diodes. These are sometimes called "clamping type" components.

#### 3.1.6

##### **combination type SPD**

SPD that incorporates both, voltage switching components and voltage limiting components. The SPD may exhibit voltage switching, limiting or both

#### 3.1.7

##### **short-circuiting type SPD**

SPD tested according to Class II tests which changes its characteristic to an intentional internal short-circuit due to a surge current exceeding its nominal discharge current  $I_n$

#### 3.1.8

##### **mode of protection of an SPD**

an intended current path, between terminals that contains protective components, e.g. line-to-line, line-to-earth, line-to-neutral, neutral-to-earth.

#### 3.1.9

##### **nominal discharge current for class II test**

$I_n$

crest value of the current through the SPD having a current waveshape of 8/20

### 3.1.10

#### impulse discharge current for class I test

$I_{\text{imp}}$

crest value of a discharge current through the SPD with specified charge transfer  $Q$  and specified energy  $W/R$  in the specified time

### 3.1.11

#### maximum continuous operating voltage

$U_C$

maximum r.m.s. voltage, which may be continuously applied to the SPD's mode of protection

NOTE The  $U_C$  value covered by this standard may exceed 1 000 V.

### 3.1.12

#### follow current

$I_f$

peak current supplied by the electrical power system and flowing through the SPD after a discharge current impulse

### 3.1.13

#### rated load current

$I_L$

maximum continuous rated r.m.s. current that can be supplied to a resistive load connected to the protected output of an SPD

### 3.1.14

#### voltage protection level

$U_p$

maximum voltage to be expected at the SPD terminals due to an impulse stress with defined voltage steepness and an impulse stress with a discharge current with given amplitude and waveshape

NOTE The voltage protection level is given by the manufacturer and may not be exceeded by:

- the measured limiting voltage, determined for front-of-wave sparkover (if applicable) and the measured limiting voltage, determined from the residual voltage measurements at amplitudes corresponding to  $I_n$  and/or  $I_{\text{imp}}$  respectively for test classes II and/or I;
- the measured limiting voltage at  $U_{OC}$ , determined for the combination wave for test class III.

### 3.1.15

#### measured limiting voltage

highest value of voltage that is measured across the terminals of the SPD during the application of impulses of specified waveshape and amplitude

### 3.1.16

#### residual voltage

$U_{\text{res}}$

crest value of voltage that appears between the terminals of an SPD due to the passage of discharge current

### 3.1.17

#### temporary overvoltage test value

$U_T$

test voltage applied to the SPD for a specific duration  $t_T$ , to simulate the stress under TOV conditions

### 3.1.18

#### load-side surge withstand capability for a two-port SPD

ability of a two-port SPD to withstand surges on the output terminals originating in circuitry downstream of the SPD

**3.1.19****voltage rate-of-rise of a two-port SPD**

rate of change of voltage with time measured at the output terminals of a two port SPD under specified test conditions

**3.1.20****1,2/50 voltage impulse**

voltage impulse with a nominal virtual front time of 1,2  $\mu\text{s}$  and a nominal time to half-value of 50  $\mu\text{s}$

NOTE The Clause 6 of IEC 60060-1 (1989) defines the voltage impulse definitions of front time, time to half-value and waveshape tolerance.

**3.1.21****8/20 current impulse**

current impulse with a nominal virtual front time of 8  $\mu\text{s}$  and a nominal time to half-value of 20  $\mu\text{s}$

NOTE The Clause 8 of IEC 60060-1 (1989) defines the current impulse definitions of front time, time to half-value and waveshape tolerance.

**3.1.22****combination wave**

a wave characterized by defined voltage amplitude ( $U_{OC}$ ) and waveshape under open-circuit conditions and a defined current amplitude ( $I_{CW}$ ) and waveshape under short-circuit conditions

NOTE The voltage amplitude, current amplitude and waveform that is delivered to the SPD are determined by the combination wave generator (CWG) impedance  $Z_f$  and the impedance of the DUT.

**3.1.23****open circuit voltage**

$U_{OC}$

open circuit voltage of the combination wave generator at the point of connection of the device under test

**3.1.24****combination wave generator short-circuit current**

$I_{CW}$

prospective short-circuit current of the combination wave generator, at the point of connection of the device under test

NOTE When the SPD is connected to the combination wave generator, the current that flows through the device is generally less than  $I_{CW}$ .

**3.1.25****thermal stability**

SPD is thermally stable if, after heating up during the operating duty test, its temperature decreases with time while energized at specified maximum continuous operating voltage and at specified ambient temperature conditions

**3.1.26****degradation (of performance)**

undesired permanent departure in the operational performance of equipment or a system from its intended performance

**3.1.27****short-circuit current rating**

$I_{SCCR}$

maximum prospective short-circuit current from the power system for which the SPD, in conjunction with the disconnector specified, is rated
