## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/legal/home.htm>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Transmission and Multiplexing (TM).

The present document contains the minimum technical requirements to ensure compatibility of products and conformance with radio regulations across ETSI member states. Radio terminals from different manufacturers are not required to interwork at radio frequency (i.e. no common air interface). However, terminals may be combined with other manufacturers' equipment on a Radio Frequency (RF) branching network for operation on different polarizations.

The present document defines the requirements of radio terminal and radio relay equipment and associated interfaces. The requirements for multiplex, network management and antenna/feeder equipment may be addressed elsewhere.

### THE STANDARD PREVIEW

#### (standards.iteh.ai) National transposition dates

Date of latest announcement of this EN (doa):	SIST EN 300 234 V1.3.2:2003 <a href="https://standards.iteh.ai/catalog/standards/sist/566343d2-c811-4db0-967a-02e010994d/sist-en-300-234-v1-3-2-2003">https://standards.iteh.ai/catalog/standards/sist/566343d2-c811-4db0-967a-02e010994d/sist-en-300-234-v1-3-2-2003</a>	28 February 2002
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	02e010994d/sist-en-300-234-v1-3-2-2003	31 August 2002
Date of withdrawal of any conflicting National Standard (dow):		31 August 2002

## 1 Scope

The present document specifies parameters for high capacity STM-1 digital radio-relay systems designed to operate in defined bands up to 15 GHz. The channel spacing between adjacent cross-polar channels is generally approximately 30 MHz. Operation in the Adjacent Channel alternated cross-polar mode is foreseen. The present document specifies the minimum performance parameters for terrestrial fixed service radio communications equipment operating in the frequency bands up to 15 GHz and contains a revision from the previous version, in the area of:

- modification of the RF spectrum masks taking into account the compatibility requirements.

Recognizing that in some geographical areas there is a high demand for spectrum two different grades of system has been defined:

- Class 5 Grade A: equipment spectral efficiency based on typically 64 or 128-states modulation scheme (e.g. 64-QAM, 128-QAM, or equivalent) to be deployed, on parallel routes, with cross-polar adjacent channel with less stringent adjacent channel performance (see table 8) or for trunked multi-channel applications;
- Class 5 Grade B: equipment spectral efficiency based on typically 64 or 128-states modulation scheme (e.g. 64-QAM, 128-QAM, or equivalent) to be deployed, on parallel routes, with cross-polar adjacent channel with more stringent adjacent channel performance (see table 9).

The above classes are indicative only and do not imply any constraint to the actual modulation format, provided that all the requirements in the present document are met.

- Introduction of unique system type codes for regulatory reference to the various system types detailed in the present document, refer to new annex C (normative) and related categories of equipment classes of spectral efficiency.
- Additional specification for CW spectral lines exceeding the spectrum mask.

The applications of these digital radio-relay systems are anticipated to be in the trunk, regional and access networks, at data rates of Synchronous Transport Module, level 1 (STM-1). The parameters to be specified fall into two categories:

- those that are required to provide compatibility between channels from different sources of equipment on the same route connected either to separate antennas or separate polarizations of the same antenna. This category also includes parameters providing compatibility with the existing radio-relay network;
- parameters defining the transmission quality of the proposed system.

The standardization deals with RF and baseband characteristics. Antenna/feeder system requirements are covered in EN 300 833 [29].

Two possible baseband interfaces for SDH systems have to be considered: one for STM-1 and another for 140 Mbit/s signals.

The present document does not contain aspects related to test procedures and test conditions, however they are to be found in EN 301 126-1 [27].

Safety aspects are outside the mandate of ETSI and they will not be considered in the present document. However compliance to EN 60950 [43] will be required to comply with Directive 1999/5/EC [44] (R&TTE Directive).

Technical background for most of the parameters and requirements referred in the present document may be found in TR 101 036-1 [28].

## 3 Symbols and abbreviations

### 3.1 Symbols

For the purposes of the present document, the following symbols apply:

<b>THE STANDARD PREVIEW</b> <b>(standards.iteh.ai)</b>	
dB	decibel
dBc	decibel relative to mean carrier power
dBm	decibel relative to 1 milliWatt
GHz	GigaHertz
kHz	kiloHertz
Mbit/s	Mega-bits per second
MHz	MegaHertz
ppm	parts per million

### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ATPC	Automatic Transmit Power Control
BBER	Background Block Error Ratio
BER	Bit Error Ratio
BWe	evaluation BandWidth (resolution bandwidth in which spectrum components are measured)
C/I	Carrier to Interference ratio
CEPT	Conférence des Administrations Européennes des Postes et Télécommunications
CMI	Coded Mark Inversion
CSmin	minimum practical Channel Separation (for a given radio-frequency channel arrangement)
CW	Continuous Wave
DC	Direct Current
DRRS	Digital Radio Relay Systems
EMC	ElectroMagnetic Compatibility
ERC	European Radiocommunications Committee
ESR	Errored Seconds Ratio
IEC	International Electrotechnical Commission
IF	Intermediate Frequency
IPI	Inter-Port Isolation
ITU-R	International Telecommunication Union-Radiocommunications standardization sector
ITU-T	International Telecommunication Union-Telecommunications standardization sector
LO	Local Oscillator

PDH	Plesiochronous Digital Hierarchy
PRBS	Pseudo Random Binary Sequence
QAM	Quadrature Amplitude Modulation
RBER	Residual BER
RF	Radio Frequency
RFC	Remote Frequency Control
RSL	Receive Signal Level
RTPC	Remote Transmit Power Control
SDH	Synchronous Digital Hierarchy
SOH	Section OverHead
STM-N	Synchronous Transport Module, level N
TM	ETSI TC-Transmission and Multiplexing
TMN	Telecommunications Management Network
XPD	cross-Polar Discrimination

## 4 General characteristics

### 4.1 Frequency bands and channel arrangements

#### 4.1.1 Channel arrangements

The equipment shall operate on one or more of the channels as defined below.

<b>4 GHz</b>	The channel plan shall be in accordance with CEPT/ERC Recommendation 12-08 [8] annex A, part 2 or ITU-R Recommendations F.382-7 [1] or F.635-5 [2].
<b>6L GHz</b>	The channel plan shall be in accordance with CEPT/ERC Recommendation 14-01 [9] or ITU-R Recommendation F.383-6 [4].
<b>7 GHz</b>	The channel plan shall be in accordance with ITU-R Recommendation F.385-6 [3].
<b>8L GHz</b>	The channel plan shall be in accordance with ITU-R Recommendation F.386-6 [5].
<b>13 GHz</b>	The channel plan shall be in accordance with CEPT/ERC Recommendation 12-02 [10] or ITU-R Recommendation F.497-6 [6].
<b>15 GHz</b>	The channel plan shall be in accordance with CEPT/ERC Recommendation 12-07 [11] or ITU-R Recommendation F.636-3 [7].

### 4.2 Compatibility requirements between systems

The compatibility requirements between systems are as follows:

- a) there shall be no requirement to operate transmitting equipment from one manufacturer with receiving equipment from another;
- b) there may be a requirement to multiplex different manufacturers equipment on the same polarization of the same antenna;
- c) there may be a requirement to multiplex different manufacturers equipment on different polarization of the same antenna. This will not apply to systems with integral antenna.

### 4.3 Performance and availability requirements

Equipment shall be designed in order to meet network performance and availability requirements foreseen by ITU-T Recommendations G.826 [23] and G.827 [24] following the criteria defined in ITU-R Recommendations F.1092-1 [15] and F.1189-1 [14] for international or national portion of the digital path.
