Reference number ISO 8122: 1988 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8122 was prepared by Technical Committee ISO/TC 72,

Textile machinery and allied machinery and accessories and ards.iteh.ai)

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated: //standards.itch.ar/catalog/standards/sist/467359de-8e3e-45dd-a011-5b90a1e4622f/iso-8122-1988

Textile machinery — Knitting machines — Number of needles for circular knitting machines of large nominal diameter

1 Scope and field of application

This International Standard specifies the usual number of needles for single face, double face and "links-links" circular knitting machines of large nominal diameter in terms of the needle pitch or gauge *E* and the machine nominal diameter; it may be used as a basis for the comparison of fabrics knitted on these machines.

The deviation from the theoretical number of needles shall not exceed $^{+3}_{-9}$ for case a) and $^{+6}_{-18}$ for case b).

NOTE — The usual number (rounded) of needles is therefore a multiple of 12 or 24 which occurs in the fixed tolerance interval for the theoretical number of needles, i.e. $^{+3}_{-9}$ or $^{+6}_{-18}$.

NOTE — The classification and vocabulary of knitting machines are laid down in ISO 7839.

ISO 8122:1983.2 Calculation
MOTE — The classification and vocabulary of knitting machines are laid down in ISO 7839.

5b90a1c4622f/iso-812The theoretical number, $N_{\rm t}$, of needles is obtained using the following formula:

2 References

ISO 8188, Textile machinery and accessories — Pitches of knitting machine needles.

3 Number of needles

3.1 General

The numerical designations of the nominal diameters of circular knitting machines and the needle pitches are given in ISO 8117 and ISO 8188.

To determine the usual number, $N_{\rm u}$ (rounded number), of needles for circular knitting machines of large nominal diameter from the theoretical number, $N_{\rm t}$, of needles, take as the divisor

- a) 12, for machines with nominal diameters less than or equal to 508 mm, and
- b) 24, for machines with nominal diameters greater than 508 mm.

$$N_{\rm t} = d_{\rm c} \pi E$$

where

 $N_{\rm t}$ is the theoretical number of needles;

 $\pi = 3,141 592 7;$

 $d_{\rm c}$ is the designation for the nominal diameter of the knitting machine;

E is the gauge.

The usual number, $N_{\rm u}$, of needles, as given in the table, is the number rounded according to the requirements of 3.1.

Example:

The theoretical number of needles for a knitting machine with a numerical designation $d_{\rm c}=18$ and a gauge E=24 is

$$N_{\rm t} = 18 \times 3,141\,592\,7 \times 24 = 1\,357,168$$

The usual number of needles is therefore in the range of 1 348,168 to 1 360,168 (i.e. 1 357,168 $^{+3}_{-9}$) and is 1 356 (using a divisor of 12) in this case.
