This European Standard was approved by CEN on 3 March 2003.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 14175-1:2003) has been prepared by Technical Committee CEN /TC 332, "Laboratory equipment", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2003, and conflicting national standards shall be withdrawn at the latest by November 2003.

This part of EN 14175 is applicable from the date of publication (DOP). For placing on the market of fume cupboards at DOP complying with a national standard in Europe, this part of EN 14175 or the national standard may be applied until DOP + 6 months.

This part of EN 14175 is not applicable to fume cupboards which have been installed in the work place before DOP + 6 months if not otherwise declared by the manufacturer.

EN 14175 consists of the following parts, under the general title *Fume cupboards*

- Part 1: Vocabulary **iTeh STANDARD PREVIEW**
(standards.iteh.ai)
- Part 2: Safety and performance requirements
- Part 3: Type test methods [SIST EN 14175-1:2003](#)
- Part 4: On-site test methods <https://standards.iteh.ai/catalog/standards/sist/d66745e4-7e7e-4734-88ee-5ea30ef028d4/sist-en-14175-1-2003>
- Part 5: Recommendations for installation and maintenance (in preparation)
- Part 6: Variable air volume fume cupboards (in preparation)

Attention is drawn to the addition and modification of terms given in prEN 14175-3:2003.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

Introduction

The objective of this part 1 of EN 14175 is to give definitions for terms relevant to fume cupboards for general use.

The terms and their definitions offer assistance in the construction of fume cupboards, in the drafting of user information as well as in the testing of fume cupboards. They are intended to contribute towards mutual understanding amongst manufacturers, laboratory designers, users and health and safety authorities.

Terms which occur the first time in the definition of another term of this European standard are printed in bold type.

1 Scope

This part 1 of EN 14175 provides terms and definitions for fume cupboards (see 3.1). Corresponding terms in eight European languages are given in the normative annex A.

For safety and performance requirements of fume cupboards EN 14175-2 applies.

For type testing of fume cupboards prEN 14175-3 applies.

For microbiological safety cabinets ~~is EN 12469~~ **iTeh STANDARD PREVIEW**
(standards.iteh.ai)

This part of EN 14175 does not address recirculatory filtration fume cupboards or devices used as animal accommodation.

[SIST EN 14175-1:2003](#)

2 Normative references

<https://standards.iteh.ai/catalog/standards/sist/d66745e4-7e7e-4734-88ce-5ea30ef028d4/sist-en-14175-1-2003>

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

3 Types of fume cupboards

3.1 fume cupboards

protective device to be ventilated by an induced flow of air through an adjustable working opening

- with an enclosure designed to limit the spread of airborne contaminants to operators and other personnel outside the device,
- offering a degree of mechanical protection, and
- providing for the controlled release of airborne contaminants

NOTE A fume cupboard is a ventilated enclosure complying with the requirements specified in EN 14175-2.

3.2**bench type fume cupboard**

fume cupboard where the **work surface** is a minimum of 720 mm above the floor level

3.3**low level fume cupboard**

fume cupboard where the work surface is between floor level and 720 mm

3.4**walk-in fume cupboard**

fume cupboard where the work surface is at floor level or below

3.5**variable air volume (VAV) fume cupboard**

fume cupboard that provides a variable **extract volume flow rate** depending on the **sash opening**

3.6**recirculatory filtration fume cupboard**

protective device able, by trapping specified pollutants, to exhaust room air back to the room

4 Parts of fume cupboards

4.1**sash**

adjustable protective screen between the operator and the **workspace**

iTeh STANDARD PREVIEW
(standards.iteh.ai)

4.2**multiple sashes**

two or more screens arranged to operate in parallel within the free area of opening of the fume cupboard

<https://standards.iteh.ai/catalog/standards/sist/d66745e4-7e7e-4734-88ce-5ea30ef028d4/sist-en-14175-1-2003>

4.3**combination sashes**

screen providing both vertical and horizontal adjustment within the free area of the fume cupboard opening

NOTE The most common form is a suspended vertically opening frame incorporating horizontal tracks within the frame to accommodate multiple horizontal transparent screens; these can be adjusted independently of the vertical position of the opening frame.

4.4**work surface**

upper surface of the platform or slab forming the base of the fume cupboard's **workspace**

4.5**baffle**

panel or panels located within the fume cupboard which aids in distributing the air moving into and through the fume cupboard

4.6**services**

drainage and supplies of illumination, electricity, water, vacuum, compressed air and other gases and liquids

5 Design of fume cupboards

5.1**overall width of fume cupboard**

distance measured horizontally between the two outer vertical side faces of the fume cupboard

5.2

overall depth of fume cupboard

distance measured horizontally from the foremost front vertical face of the fume cupboard to the furthest vertical feature of the fume cupboard.

NOTE Any service control or device affixed to the front of the fume cupboard and forming part of the fume cupboard is used as the measuring point for the foremost front vertical face of the fume cupboard.

5.3

overall height of fume cupboard

distance measured vertically from the underside of the lowest horizontal surface of the fume cupboard to the uppermost horizontal surface of the fume cupboard.

NOTE Any device forming part of the fume cupboard's structure extending above and/or below the main body of the fume cupboard (such as the sash glazing and/or its track mechanism), is used as the measuring point for the lowest and uppermost horizontal surface of the fume cupboard.

5.4

plane of sash

plane in which the sash moves

5.5

sash opening

distance in the direction of sash movement between the boundaries of the opening

NOTE If airfoils are provided, they are taken as boundaries.

iTeh STANDARD PREVIEW (standards.iteh.ai)

5.6

area of opening

area limited by the two vertical and horizontal sides of the clear opening into the fume cupboard's **workspace** located in the plane of sash

[SIST EN 14175-1:2003](#)

NOTE The depth or height of any recessed track for operation of the sash is not included in the area of the opening.

[5ea30ef028d4/sist-en-14175-1-2003](#)

5.7

operational sash opening

variable opening up to a position to which the sash could be opened during use of the fume cupboard and where a stop device limits further opening unless deliberately overridden

5.8

minimum sash opening

minimum opening to which the sash could be closed

5.9

maximum sash opening

maximum opening to which the sash could be opened when stop devices, limiting height in operational sash opening, are overridden

5.10

area of the sash opening

free area of the openings in the plane of the sash

5.11

clearance between multiple sashes

free distance between overlapping sliding sashes

5.12

workplace

room, laboratory or building where the fume cupboard is installed and where people work

5.13**workspace**

interior of the fume cupboard bounded by the internal planes of work surface, sash(es), rear, side and top walls (or baffles)

5.14**height of work surface**

distance measured from the floor level to the upper surface of the fume cupboard work surface

5.15**bypass**

constructional arrangement other than leakages that allows room air to flow into a fume cupboard by a route other than through the sash opening

6 Air flow of fume cupboards

6.1**extract system**

all ductwork and associated equipment installed between the point of connection to the fume cupboard and the point of discharge

6.2**extract volume flow rate *iTeh STANDARD PREVIEW***

volume of air extracted per unit time from the fume cupboard

(standards.iteh.ai)

6.3**extract air**

SIST EN 14175-1:2003

air extracted from the fume cupboard(s) *<http://standards.iteh.ai/catalog/standards/sist/d66745e4-7e7e-4734-88ce-5ea30ef028d4/sist-en-14175-1-2003>*

6.4**room extract air**

air extracted from the room by means other than fume cupboard(s)

6.5**make-up air**

air supplied to the room that replaces the air extracted from the room

6.6**direct make-up air**

air taken from outside of the room and fed directly to the fume cupboard

6.7**auxiliary air input**

air added into the fume cupboard from an auxiliary air system that is taken from the room and intended to improve performance rather than to partly replace the room make-up air

7 Testing of fume cupboards

7.1**containment**

capability of a fume cupboard to retain airborne contaminants within the work space

7.2**robustness**

capability of a fume cupboard to maintain containment during external front disturbances

7.3

air exchange efficiency

capability of a fume cupboard to remove airborne contaminants efficiently from the work space

7.4

pressure drop

static pressure of a fume cupboard at the point of connection to the extract system measured with respect to the static pressure of the room

7.5

face velocity

velocity of air passing through the area of the sash opening

7.6

spatial average velocity

arithmetic mean of local mean velocities

7.7

inner measurement plane

plane of the sash at the type test sash opening bounded

- at the top by the lowest point of the upper edge of the type test sash opening in the plane of the sash
- and at the bottom by the uppermost point of the lower edge of the opening
- and at the sides by the side edges of the opening

iTech STANDARD PREVIEW

(standards.itech.ai)

7.8

outer measurement plane

plane which is 50 mm out from and parallel to the plane of sash at the type test sash opening

NOTE It is bounded at the top by a horizontal line 100 mm above the upper edge of the type test sash opening, at the bottom by another horizontal line 100 mm below the lower edge of the opening and at the sides by the side edges of the opening.

7.9

instantaneous value

time-varying value occurring at a given time

7.10

maximum instantaneous value

maximum value of instantaneous value

7.11

time constant

time required to obtain a response of 63 % to a step change

NOTE

See EN 13182.

7.12

type

specimen of a design manufactured with the characteristics intended for series production

7.13

type testing

conformity testing on the basis of one or more specimens of product representative of the production

NOTE

See EN 45020.
