## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8443 was prepared by Technical Committee ISO/TC 4, *Rolling bearings*.

# Radial ball bearings with flanged outer ring — Flange dimensions

iTeh STANDARD PREVIEW  
(standards.iteh.ai)

## 1 Scope and field of application

This International Standard lays down flange dimensions for a selection of single row radial or angular contact groove ball bearings with flanged outer ring. All other boundary dimensions for complete bearings are given in ISO 15.

Tolerances for the flanges are given in Addendum 1 to ISO 492. All other tolerances for the bearings are given in ISO 492 and ISO 582. For instrument precision bearings, all tolerances are specified in ISO 1224.

## 3 Symbols

$D$  = bearing outside diameter, nominal  
 $D_1$  = flange outside diameter, nominal  
 $C$  = outer ring width, nominal  
 $C_1$  = flange width, nominal

1) At present at the stage of draft.

4 Dimensions

Tables 1 to 4 give flange dimensions for groove ball bearings grouped by diameter series and dimension series in accordance with ISO 15.
